Preface

More than 1900 cosmetic and toiletry formulations are detailed in this volume, based on information received from numerous industrial companies and other organizations. This is Volume 2 of the Second Edition of this work; Volume 1 was published in 1989. The formulations in Volume 2 do not duplicate any of those in Volume 1.

The data represent selections from manufacturers' descriptions made at no cost to, nor influence from, the makers or distributors of these materials. Only the most recent formulas have been included. It is believed that all of the trademarked raw materials listed are currently available, which will be of interest to readers concerned with raw material discontinuances.

The 1989 market for cosmetic and toiletry raw materials was \$1.6 billion. That market is projected to increase to about \$1.8 billion by 1994, thus making the information in the book particularly interesting to anyone considering new products or process variations.

Each formulation in the book is identified by a description of end use. The formulations include the following as available, in the manufacturer's own words: a listing of each raw material contained; the percent by weight of each raw material; suggested formulation procedure; and the formula source, which is the company or organization that supplied the formula. The book is divided into the following 15 sections:

- I. Antiperspirants and Deodorants
- II. Baby Products
- III. Bath and Shower Products
- IV. Beauty Aids
- V. Creams
- VI. Fragrances and Perfumes
- VII. Hair Care Products
- VIII. Lipsticks
- IX. Lotions
- X. Shampoos
- XI. Shaving Products
- XII. Soaps
- XIII. Sun Care Products
- XIV. Toothpastes
- XV. Miscellaneous

Each formula is indexed in the section which is most applicable. The reader seeking a formula for a specific end use should check each section which could possibly apply.

In addition to the above, there are two other sections that will be helpful to the reader:

- XVI. Trade-Named and Other Raw Materials Descriptions. Each raw material is listed with a brief chemical description and the name of the raw material supplier.
- XVII. Suppliers' Addresses. Addresses of suppliers of trade-named raw materials and/or formulations, some of which are not available in the usual reference books.

It should be noted that some formulations in the book are translations. The manufacturer's exact wording has been used in these cases. Occasionally different companies have listed the same raw material differently; it is hoped that the reader will be able to identify the same or similar raw materials by consulting the Trade-Named and Other Raw Materials Descriptions section.

The table of contents of the book is organized in such a way as to serve as a subject index.

My fullest appreciation is expressed to the companies and organizations which supplied the information included in this book.

March, 1992

Ernest W. Flick

NOTICE

To the best of our knowledge the information in this publication is accurate; however, the Publisher does not assume any responsibility or liability for the accuracy or completeness of, or consequences arising from, such information. This book does not purport to contain detailed user instructions, and by its range and scope could not possibly do so. Mention of trade names or commercial products does not constitute endorsement or recommendation for use by the Author or Publisher.

Cosmetic and toiletry raw materials could be toxic or cause allergies in some circumstances, and, therefore, due caution should always be exercised in the use of potentially hazardous materials and the manufacturing processes involved. Final determination of the suitability of any information or product for use contemplated by any user, and the manner of that use, is the sole responsibility of the user. We strongly recommend that users seek and adhere to a manufacturer's or supplier's current instructions for handling each material they use.

The Author and Publisher have used their best efforts to include only the most recent data available. The reader is cautioned to consult the supplier in case of questions regarding current availability.

Contents and Subject Index

SECTION I: ANTIPERSPIRANTS AND DEODORANTS	1
Alcohol-Free Roll-On Deodorant	2
Antiperspirant Stick	2
Antiperspirant(s)	3
Quick Drying Aerosol Antiperspirant	3
Anti-Perspirant Cream(s)	4
Antiperspirant Pump	5
Antiperspirant Suspension Roll-On(s)	5
Deodorant Stick(s)	10
Deodorant/Antiperspirant Spray	13
Deodorant Pump Spray(s)	13
Dry Roll-On Antiperspirant(s)	15
Enhanced Clear Hydro-Alcoholic Roll-On	17
Soft Stick Antiperspirant(s)	18
Spray Deodorant	18
Solid Antiperspirant	19
Transparent Deodorant Stick(s)	21
Underarm Roll-On Deodorant Lotion	22
SECTION II: BABY PRODUCTS	23
Baby Bath(s)	24
Baby Care Cream W/O	25
Baby's Skin Smoothing Cream	25
Baby Cream(s)	26
Baby Foam Bath, with Herbs, Re-Fatting	27
Baby Protective Cream, Type W/O	27
Baby Lotion(s)	28

Babymilk Without Perfume	30
Baby Powder	30
Baby Oil(s)	31
Baby Oil Spray, Herb/Vitamin Content	31
Baby Shampoo(s)	32
W/O-Babycreme	40
Conditioning Baby Shampoo	41
Mild Baby Bubble Bath	43
Baby Wash	43
Baby Milk	43
Mild Baby Shampoo(s)	44
Pearlescent Baby Shampoo	45
SECTION III: BATH AND SHOWER PRODUCTS	46
After Shower Rinse Off Body Mousse	47
Body Mousse	47
Alcoholic After Bath Splash	48
Pearl Body Cleanser	48
Liquid Bath Lather	48
All Over the Body: Shampoos, Shower Baths, Foam Baths	49
Bath Foam	55
Mild Body Shampoo	55
Bath Gel(s)	56
Bath Lotion	59
Bath Oil(s)	60
Foot-Care Bath with Vitamins, Deodorizing	61
Body Oil	62
Bath Salt with Pearl Pigments	65
Silky Bubble Bath	65
Blooming Bath Lotion	66
Pearlescent Bath Lotion	66
Body Contouring Gel	67
Silky Bath Gel	67
Body Emulsion, Herb Content Type O/W	68
Cream Bath, Vitamin/Herb Content	68
Bubble Bath(s)	69
Clear Bath Gelee	73
Clear Liquid Foam Bath(s)	74
Clear Shower Gel(s)	76
Cream Bath(s)	77
Fitness-Shower-Bath	80
Special-Bath	80
Foam Bath	81
Foaming Bath Oil(s)	85

Hand and Body Cleanser	89
Skin Cleanser	89

Antiperspirants and
Deodorants

ALCOHOL-FREE ROLL-ON DEODORANT

RAW MATERIALS	% By Weight
A. IMWITOR 960	6.0
Cetyl Alcohol	2.0
MIGLYOL 840	5.0
Hostaphat KL 340 N	5.0
Raluben TL	0.5
Aluminum Acetate	0.5
B. Sorbitol 70%	5.0
Carbopol 940 (Carbomer 940-Gel 1%)*	12.0
Alcohol	1.0
Water	up to 100.0
C. Perfume Oil	q.s.
* Carbomer 940-Gel: Carbomer 940 1.0%	
	Triethanolamine 0.6%
	Water up to 100.0%

Preparation:

The Carbomer-Gel is prepared, and Phase A is melted at ca. 60C. Phase B is stirred together and heated up to the same temperature. B is emulsified into A and at ca. 40C, the mass is perfumed.

Characteristics:

The deodorant is a free-flowing emulsion which is mild to the skin and is quickly absorbed without leaving behind a greasy feeling.

ANTI-PERSPIRANT CREAM

RAW MATERIALS	% By Weight
A Cetyl Alcohol	2,50
Stearyl Alcohol	2,50
Locron P	15,00
Eumulgin M8	3,00
Eutanol G	6,00
B Belsil CM 040	9,00
Water	62,00
Pigments, fragrances	q.s.

Mix A and heat to 70C, form a solid phase with warm water, work in Belsil CM 040 and dilute with water.

Temperature stability: at 45C 4 weeks.

Soft white cream. Leaves no visible traces of aluminum chlorohydrate on the skin.

Formulation 216 AH

ANTI-PERSPIRANT CREAM

RAW MATERIALS	% By Weight
A Cetyl Alcohol	2,50
Stearyl Alcohol	2,50
Locron P	10,00
Eumulgin M8	3,00
Eutanol G	6,60
B Belsil CM 040	9,00
Belsil PDM 20	3,00
Water	63,40
Pigments, fragrances	q.s.

Mix A and heat to 70C, mix in hot water, add B and mix well.

Temperature stability: at 45C over 10 weeks.

Soft white cream. Leaves no visible traces of aluminum chlorohydrate on the skin.

Formulation 217 AH

SOURCE: Wacker Silicone: Formulas

ANTIPERSPIRANT PUMP

INGREDIENTS	% By Weight
REACH 501 Solution	36.1
Alcohol SDA-40	30.0
Propylene Glycol	5.0
Deionized Water	28.5
Cremophor RH40	.2
Fragrance	q.s.

Procedure:

1. Add together ingredients B and D, mix using overhead stirring.
2. Add C, mix 10 minutes.
3. Add A slowly to batch, continue mixing until uniform.
4. Pre-mix F into E, disperse pre-mix into batch while using rapid stirring, mix for 5 minutes.

A consumer accepted hydro-alcoholic formula incorporating an enhanced chlorohydrate system that is proven clinically more effective than aluminum chlorohydrate.

SOURCE: Reheis Inc.: Formula

ANTIPERSPIRANT SUSPENSION ROLL-ON

INGREDIENTS	% By Weight
A. REZAL 36 GP SUF or REACH AZP-701	20.0
B. Bentone Gel VS-5/PC	13.5
C. Siloxane SWS-03314	66.0
D. Silica	0.5
E. Fragrance	q.s.

Procedure:

1. Mix B and C with overhead mixer for 20 minutes.
2. Add A and mix for 15 minutes.
3. Add D and E, mix for 10 minutes.
4. Homogenize for 3 minutes and pour into suitable containers.

This formula yields a smooth and dry feel to the skin upon application.

DEODORANT STICK

RAW MATERIALS	% By Weight
Sodium Stearate	6,00
Alcohol (cosmetic grade)	65,00
Propylene Glycol	24,80
Belsil CM 040	3,00
Pigments, preservatives, fragrances	q.s.

Mix all components and heat to 60-70C, until all the sodium stearate has melted. Fill at 60C.
 Temperature stability: at 45C over 10 weeks.
 Translucent stick with soft rub.
 Formulation 186 AH

SOURCE: Wacker Silicone: Formulas

DEODORANT STICK

RAW MATERIALS	% By Weight
Sodium Stearate	7.0
IMWITOR 780K	3.0
SOFTIGEN 767	12.0
1,2-Propylene Glycol	8.0
Glycerine	5.0
Water	20.0
Raluben TL	0.5
Ethanol 96%	43.5
Perfume Oil Deosafe 75 428N/II	1.0

Preparation:

All components are melted together at 50C. The mass is then cooled while stirring to about 35C and poured into molds. Before packaging, it is advantageous to store the sticks for a short time.

Characteristics:

The stick is light transparent white, has a very good rub off and a nice cooling effect on the skin.

SOURCE: Huls America Inc.: Formula 1.5N

DEODORANT STICK

RAW MATERIALS	% By Weight
a) Stearin	5.0
1,2-Propylene glycol	46.0
b) Water, distilled	40.0
Sodium hydroxide	1.0
c) Ethyl alcohol 96 vol. %	7.5
Deodorant Richter/K	0.5

Manufacture:

- dissolve while stirring at about 60C;
- heat to about 60C and stir into a). Continue stirring until the solution has cooled to about 50C;
- stir in.
Perfume, and immediately fill into the holders.

In contrast to sticks with a high content of ethyl alcohol, this stick with propylene glycol also keeps well in holders which are not completely airtight, since propylene glycol does not evaporate, and actually inhibits the evaporation of water.

SOURCE: CLR/Chemisches Laboratorium Dr. Kurt Richter GmbH: Model Formulations 10

DEODORANT STICK

RAW MATERIALS	% By Weight
A. SOFTISAN 100	38.5
MIGLYOL 812	30.0
IMWITOR 960	10.0
Beeswax	20.0
Hexachlorophene	0.5
B. Deosafe 75428 N/I	1.0

Preparation:

(A) is melted at 75-80C. It is then stirred until cooled to ca. 40C. (B) is added and the mass is poured into forms.

SOURCE: Huls America Inc.: Formula 1.5D

DEODORANT STICK WITH A "DRY EFFECT"

RAW MATERIALS	% By Weight
SOFTISAN 100	38.5
MIGLYOL 812	30.0
IMWITOR 960	10.0
Beeswax	20.0
Deosafe 75 428 N/II Perfume Oil	1.5

Preparation:

The components are melted together at ca. 75C, cooled while stirring to a cream-melt consistency, perfumed, and poured into molds.

Characteristics:

The stick is water- and alcohol-free, is absorbed well into the skin, is not greasy, and leaves behind a "dry feeling" on the skin.

SOURCE: Huls America Inc.: Formula 1.5D(1)

DRY ROLL-ON ANTIPERSPIRANT-A

RAW MATERIALS	% By Weight
A. ABIL Wax 9801	0.50
Isopropyl Myristate	5.00
Cyclomethicone (ABIL B8839/DC 344)	40.00
Quaternium 18 Hectorite (Bentone 38 powder)	2.00
Ethanol - 200 proof or	
Ethanol - 190 proof	2.00
B. Isopropyl Myristate	5.00
Cyclomethicone (ABIL B8839/DC 344)	20.50
C. Aluminum Chlorohydrate	25.00
D. Perfume	QS

DRY ROLL-ON ANTIPERSIRANT-B

RAW MATERIALS	% By Weight
A. ABIL Wax 9801	0.50
Isopropyl Myristate	5.00
Cyclomethicone (ABIL B8839/DC 344)	40.00
Quaternium 18 Hectorite (Bentone 38 powder)	2.00
Ethanol - 200 proof or	
Ethanol - 190 proof	2.00
B. Hexyl Laurate (Standamul CTA or Cetrol A)	3.00
Cyclomethicone (ABIL B8839/DC 344)	22.50
C. Aluminum Chlorohydrate	25.00
Perfume	QS

Procedure:

- Blend ABIL Wax 9801, ABIL B8839 and Isopropyl Myristate. Sprinkle in Bentone 38 powder, avoiding lumps, while using a high speed mixer.
- Add Ethanol. 190 is preferred. Mix. Process through homogenizer with shear until a clear soft gel or clear medium viscosity liquid is formed.
- Mix phase B. Add Aluminum Chlorohydrate. Mix until uniform. Add to phase A gel. Mix/homogenize until well dispersed.
- Add Perfume. Mix.

ENHANCED ANTIPERSPIRANT STICK

INGREDIENTS	% By Weight
A. REACH AZP-501	20.0
B. Siloxane F-222	50.5
C. Stearyl Alcohol	20.0
D. Promyristyl PM-3	5.0
E. PEG-8 Distearate	2.0
F. Talc, 325 mesh	1.0
G. Silica	1.5
H. Fragrance	q.s.

Procedure:

1. Add B to reaction vessel and heat to 65C.
2. Add D and E with moderate stirring.
3. Add C slowly, maintain 65C. Increase agitation and add A. Mix for 5 minutes.
4. Add F, mix 5 minutes.
5. Add G, mix 5 minutes.
6. Add H. Using slow to moderate stirring, cool to 55C. and pour into stick casings.

A smooth feeling, high payout stick incorporating a cost effective enhanced efficacy aluminum-zirconium active demonstrating optimal antiperspirant efficacy.

SOURCE: Reheis Inc.: Formula

ENHANCED ANTIPERSPIRANT CREAM

INGREDIENTS	% By Weight
A. REACH 501 Soln.	40.0
B. Arlacel 165	15.0
C. Cetyl Alcohol	5.0
D. Sorbitol 70% Soln.	3.0
E. Deionized Water	37.0
F. Fragrance	q.s.

Procedure:

1. Combine B and C and heat to 75C.
2. Combine D and E and heat to 75C.
3. Add slowly to B/C combination and cool to 55C. while agitating with overhead mixer.
4. Add A and mix thoroughly.
5. Add F and cool to 35C. Homogenize at 3000 psi.

An aesthetically elegant cream incorporating an enhanced efficacy aluminum chlorohydrate that is stable in aqueous formulations.

SOURCE: Reheis Inc.: Formula

ENHANCED CLEAR HYDRO-ALCOHOLIC ROLL-ON

INGREDIENTS	% By Weight
A. REACH 501 Solution	40.0
B. Procetyl AWS	2.0
C. Natrosol 250MR CS	0.2
D. Deionized Water	15.7
E. SD Alcohol 40	42.1
F. Fragrance	q.s.

Procedure:

1. Disperse C in D. Mix until clear, about 2 hours.
2. Add A gradually. Mix rapidly using overhead stirring to dissolve.
3. In a separate container combine B and E, then add slowly with constant agitation to the rest of the batch.
4. Add fragrance, mix thoroughly and pour into clear roll-on containers

A fast drying, hydro-alcoholic roll-on incorporating an activated aluminum chlorohydrate system that is proven clinically more effective than aluminum chlorohydrate.

SOURCE: Reheis Inc.: Formula

ROLL-ON ANTIPERSPIRANT

INGREDIENT	% By Weight
A. VEEGUM HV, Magnesium Aluminum Silicate	1.00
Deionized Water	29.00
B. Glyceryl Stearate (and) PEG-100 Stearate	8.00
C. Aluminum Zirconium Tetrachlorohydrate GLY, 30% Soln.	33.00
Aluminum Chloride, 32 Baume Soln.	5.50
Aluminum Chlorhydrate, 50% Soln.	16.50
D. Cyclomethicone	7.00
E. Fragrance, Dye, Preservative	q.s.

Features:

This low viscosity emulsion is stabilized with VEEGUM HV which also provides moderate thickening and excellent, dry after-feel. The Aluminum/Zirconium Complex has higher anti-perspirant efficacy than aluminum chlorohydrate.

Preparation:

Add VEEGUM HV to water at 75C and mix with maximum available shear until smooth, uniform and completely free of undispersed particles. In another container, heat B to 75C. Heat C to 55C in a third container. Add B to A with slow mixing and cool to 50C. Add C to A & B. Mix at slow speed until the temperature reaches 25C. Add D and homogenize for 5 minutes. Add E. Mix until uniform and package.

SOURCE: R.T. Vanderbilt Co., Inc.: Formula No. 443

SOFT STICK ANTIPERSPIRANT

INGREDIENTS	% By Weight
Stearic Acid (Triple Press)	15.0
Cetyl Alcohol	15.0
Aluminum Chlorohydrate	20.0
Dow 345 Fluid	44.5
Velsan P816	2.0
Sandopan KST	3.0
Orgasol 2002 D	0.5

Procedure:

Charge to vessel stearic acid, cetyl alcohol, Velsan P816, Sandopan KST to 65-70C. Mix until homogeneous. Discontinue heating. Add Orgasol & Aluminum chlorohydrate. Cool to 55C. Add Dow 345 Fluid slowly; at 45-50C pour into containers. Allow to cool undisturbed.

Soft, smooth non-greasy payoff of this stick is due to the property of Velsan P8-16 to reduce the oily feel of silicone. Non Sandopan KST replaces the traditional crystallizing sodium stearate.

Properties:

Appearance: White stick
 Congealing point: 34.5C

SOLID ANTIPERSPIRANT

RAW MATERIAL DESCRIPTION	Sequence	% By Weight
Propylene Glycol	1	25.50
Carbowax 400	1	3.50
Rehydrol 11	2	15.00
Lipamide SM	3	27.00
Witconol APS	4	12.00
D.C. Silicone Fluid 556	4	1.00
Liponate IPP	4	3.50
Liponate PC	4	1.50
SD 40 Alcohol Anhydrous (200 Proof)	5	10.00
Fragrance	6	1.00

Manufacturing Procedure:

1. Weigh out and add Sequence 1 materials into a suitable steam-jacketed kettle equipped with variable or two-speed side-wiping agitator and begin moderate speed agitation.
2. Slowly add Sequence 2 to Sequence 1 with moderate speed side-wiping agitation. When the addition is completed, begin to heat combined Sequence 1 and 2 to 83C; maintain temperature and mix until Sequence 2 is completely dissolved.
3. Slowly add Sequence 3 to batch using slow speed side-wiping agitation. Continue maintaining temperature at 83C and mix until Sequence 3 is completely dissolved.
4. In a separate container, combine Sequence 4 ingredients and heat to 83C with moderate mixing.
5. Maintain 83C temperature and slowly add combined Sequence 4 at 83C to batch using continuous slow speed side-wiping agitation. Mix until Sequence 4 is completely dissolved.
6. Turn off heat; drain steam from kettle and allow batch to cool to 78C, using slow speed side-wiping agitation.
7. At 78C, slowly add Sequence 5 to batch using continuous slow speed side-wiping agitation. Mix until batch is clear (approximately 3-5 minutes).

Aluminum Zirconium Tetrachlorohydrate-Gly	22.00
Fragrance	0.50

SOLID STICK ANTIPERSPIRANT-B

INGREDIENT	% By Weight
Lanette 18 DEO	15.00
Castorwax MP-80	4.00
Fluid AP	1.50
Cyclomethicone	51.50
ABIL Wax 2434	0.50
Talc	5.00
Aluminum Zirconium Tetrachlorohydrate-Gly	22.00
Fragrance	0.50

SOLID STICK ANTIPERSPIRANT-C

INGREDIENT	% By Weight
Lanette 18 DEO	15.00
Castorwax MP-80	4.00
Fluid AP	1.50
Cyclomethicone	51.50
ABIL Wax 9801	0.25
ABIL Wax 2434	0.25
Talc	5.00
Aluminum Zirconium Tetrachlorohydrate-Gly	22.00
Fragrance	0.50

Manufacturing Directions:

1. Add the cyclomethicone to a covered mixing tank equipped with a turbine propeller. Begin heating.
2. Add the Fluid AP, Lanette, Castorwax and ABIL Waxes. Bring temperature to 85-87C. Hold for 30 minutes at temperature while mixing.
3. Add the Talc. Do not allow the temperature to drop below 75C during addition. Maintain temperature at 80-85C while mixing for 10-15 minutes.
4. Add the Aluminum-Zirconium Complex. Do not allow the temperature to drop below 70C during addition. Mix for 15-20 minutes at 175-180C.
5. Cool while mixing to 60-62C. Add fragrance.
6. Dispense into containers at 58-61C.

TRANSPARENT DEODORANT STICK

RAW MATERIALS	% By Weight
A. Sodium Stearate	8.0
SOFTIGEN 767	40.0
Glycerin	10.0
Sucrose	8.0
Preservative	q.s.
Water	up to 100.0
B. Locron L	1.0
Ethanol (96%)	3.0
Deosafe 75428 N/I	1.0

Preparation:

(A) is heated until melted. (B) is stirred in at ca. 30C., and then the mass is poured into molds. The stick is transparent and slightly yellow. Upon rubbing, it is not too soft, and quickly penetrates the skin.

SOURCE: Huls America Inc.: Formula 1.5C

TRANSPARENT DEODORANT STICK

RAW MATERIALS	% By Weight
A. Sodium Stearate	8.0
SOFTIGEN 767	40.0
Glycerine	10.0
Sucrose	8.0
Water	29.7
Preservative	q.s.
B. Ethanol 96%	3.3
Deosafe 75 428N/II, Perfume Oil	1.0

Preparation:

(A) is added together and heated until melted. (B) is added at ca. 40C, and then the mass is poured into molds.

Characteristics:

The stick is translucent and light yellow. Its rub-off is not too soft, and absorbs quickly into the skin.

SOURCE: Huls America Inc.: Formula 1.5C (1)

UNDERARM ROLL-ON DEODORANT LOTION

INGREDIENTS	% By Weight
Propylene glycol	35.00
Witch hazel	32.70
Water	30.00
Oat Pro oat flour	2.00
KELTROL T xanthan gum	0.30
Preservative and fragrance	to suit

Procedure:

1. Combine KELTROL T and propylene glycol to form a slurry.
2. With good agitation, using a Lightnin'-type mixer, add gum slurry to water. Continue mixing until KELTROL T is hydrated (about 10 minutes). Add preservative.
3. Add oat flour and stir to form a uniform solution. Add fragrance.
4. Package.

The addition of KELTROL T xanthan gum provides ease of application and good cling when the lotion is applied.

BABY SHAMPOO

INGREDIENTS	% By Weight
Water (Deionized)	52.0
Schercomid AME-70	5.0
Schercotaine CAB 45%	10.0
Schercopol OMS-Na 35%	15.0
Ammonium Lauryl Sulfate 30%	15.0
Olive Oil (W) Water Soluble	2.0
Schercomid SLM-LC	1.0
Preservative	q.s.
Citric Acid 50% Sol'n	q.s.
Fragrance	q.s.

Procedure:

1. Heat water 45-50C. With good stirring add the 1st four ingredients. Mix until clear.
2. With continuous agitation add Olive Oil (W) then Schercomid SLM-LC.
3. Adjust pH if necessary with Citric Acid sol'n.
4. Cool to 30C q.s. with Fragrance and Preservative.

Typical Specifications:

Activity: 20%

Viscosity @ 25C: 1900 cps

(If higher viscosity is desired increase Schercomid SLM-LC)

pH @ 25C: 5.5

BABY SHAMPOO

RAW MATERIALS	% By Weight
MIRANOL BM Conc.	17.0
CEDEPAL TD407MF	7.5
Tween 20	10.0
Kessco PEG 6000 Distearate	3.0
Boric Acid	1.0
Water	61.5

Procedure:

Blend all ingredients except boric acid and water. Heat to 60C until uniform. Add water and boric acid and adjust pH to 6.5 with hydrochloric acid.

Solids: 26.1%, viscosity: 800 cps.

OPACIFIED BABY SHAMPOO

RAW MATERIALS	% By Weight
MIRANOL 2MCAS Modified	30.0
Cedemide AX	2.0
Cerasynt IP	0.5
Methocel E4M Premium, 3% Solution	35.0
Water	32.5

Procedure:

- (A) To prepare the Methocel solution add three parts of Methocel E4M to 30 parts of water at 80C. Mix until uniformly suspended. Add 67 parts of cold water with mixing and stir until uniform.
- (B) Combine the MIRANOL 2MCAS Modified, Cedemide AX and Cerasynt IP and heat to 80C. Add the 3% Methocel solution slowly with good mixing, then the remaining water. Mix until uniform. Adjust pH to 7.0 with hydrochloric acid.

Solids: 17.0%, viscosity: 4,000 cps.

BATH FOAM

INGREDIENT	% By Weight
Standapol ES-2	44.0000
Standamid KD	1.5000
Texapon ST 40	1.0000
Demineralized Water	44.0000
Relaxant #278 HS	3.0000
Eucalyptus HS	1.5000
Tri-Sept M	0.2000
Tri-Sept P	0.1000
Tristat IU	0.2000
Tween 20	3.0000
Perfume	1.0000
Sodium Chloride	0.5000
Certified Color	QS

Procedure:

1. In the main tank blend the Standamid with the Standapol and mix well.
2. Preblend the Tween with the fragrance and set aside.
3. In the side tank blend the water, Texapon ST40, Herbals, Parabens and Tristat.
4. Add side tank contents to main tank and mix well with prop agitation.
5. Add fragrance blend and mix well.
6. Color as required.
7. Add sodium chloride and adjust viscosity to desired specification.

BATH LOTION

RAW MATERIALS

% By Weight

Part A:

1. MACKAM CAP	5.00
2. Sodium Laureth Sulfate (60% Active)	5.00
3. Propylene Glycol	1.00
4. Methyl Salicylate	0.50
5. Peppermint Oil (Redistilled)	1.00
6. Menthol Crystals	0.20

Part B:

7. Hydroxyethyl Cellulose (Cellosize qp 4400)	1.00
8. Deionized Water	51.60

Part C:

9. Deionized Water	22.00
10. Tetrasodium EDTA (Chelon 40% Active)	0.40
11. Sodium Hexametaphosphate	1.00

Part D:

12. Sodium Styrene/Acrylates DivinylBenzene Copolymer (and) Ammonium Nonoxynol-4 Sulfate	1.00
13. Deionized Water	10.00

Part E:

14. MACKSTAT DM	q.s.
-----------------	------

Manufacturing Procedure:

Part A: Prepare in mixing tank #1, #2, #3. And add (at room temperature) items #4, #5, #6, thoroughly blend together. Keep tank covered.

Part B: In separate container prepare part B by dissolving Hydroxyethyl Cellulose (Cellosize qp 4400) 1.00% in 51.60% Deionized Cold Water. And mix until solution is completely clear and free of lumps. Add the clear thick solution to Part A and blend together.

Part C: In a separate container prepare the solution of #9, #10 and #11. Add to above solution.

Part D: In separate vessel dilute #12 with #13 and mix until all particles are completely dissolved. Slowly add to above solution.

Part E: Mix in part E into batch. Blend together well and filter through nylon gauze if necessary. Check pH.

pH: 6.6-7.4

A formulation containing decyl oleate which gives an emollient feel, combined with a degree of detergency, is given.

The method of manufacture is to warm all ingredients except the perfume, dye and preservative, with gentle stirring, until homogeneous. The formulation is cooled to less than 35C prior to adding the perfume, dye and preservative.

BATH SALT WITH PEARL PIGMENTS

COMPOSITION

Salt (NaCl) coarse crystalline	990 g
Pearl or color lustre pigment	10 g
Vinylpyrrolidon-Vinylacetate-Copolymer as film forming substance (e.g. Luviskol VA 64, 10% solution in isopropanol + fragrance oil)	40 ml

SOURCE: EM Pigments Division: Formula

SILKY BUBBLE BATH

RAW MATERIALS	% By Weight
Phase A:	
INCROSUL OTS	35.00
INCROMINE Oxide C	3.50
INCROMIDE LR	2.00
CROVOL PK-70	5.00
Sodium Chloride	1.25
Deionized Water	48.75
Phase B:	
CRODAPEARL Liquid	3.00
CROSILK Liquid	.50
Germaben II	1.00

Procedure:

Combine Phase A with slight heating to 65C. When clear, stop heating, continue mixing, and cool to 45C. At 45C add Phase B. Continue cooling and mixing to room temperature and adjust the pH. pH 6.0+-.0.5 with citric acid.

This elegant bubble bath incorporates INCROSUL OTS as the primary surfactant giving long lasting and copious bubbles. Its pearly elegance is enhanced by the addition of CROSILK Liquid. BP-39-1 leaves a conditioned skin afterfeel due to CROVOL PK-70, Croda's ethoxylated modified triglyceride. CROVOL PK-70, is a palm kernel oil derivative, and an effective, mild, super fattening agent.

SOURCE: Croda Inc.: INCROSUL OTS: Formula BP-39-1

BLOOMING BATH LOTION

INGREDIENTS	% By Weight
Part A:	
CUTINA GMS	4.0
EUMULGIN B-1	4.0
CETIOL G-20S	15.0
CETIOL LC	15.0
Part B:	
Water	60.5
Propylene Glycol	1.5
Part C:	
Fragrance	q.s.
Preservative	q.s.

Procedure:

1. Mix and heat Part A 60-65C.
2. Mix and heat Part B 60-65C and add to Part A.
3. Mix until cooled to 40C and add Part C.

This emulsion will "bloom" as it disperses into warm bath water. It is a unique bath lotion due to its stability at a very low viscosity. It contains two emollient oils - CETIOL G-20S and CETIOL LC - both of which are very gentle to delicate skin.

SOURCE: Henkel: Formula H-4821

PEARLESCENT BATH LOTION

RAW MATERIALS	% By Weight
Sodium Lauryl Sulfate	40.0
MACKANATE EL	30.0
MACKAM 35 HP	5.0
MACKESTER SP	1.5
Sodium Chloride	1.0
MACKSTAT DM	9.5
Water, Dye, Fragrance qs to	100.0

Procedure:

1. Add first four components to water and heat to 70 degrees C.
2. Blend until EGMS is completely dispersed.
3. Add sodium chloride and cool to 45 degrees C.
4. Add preservative, fragrance and dye.
5. Cool to room temperature and fill.

Perfume and Preservative	q.s.

Procedure:

Disperse the QUATRISOFT Polymer LM-200 with good agitation in water at room temperature. When thoroughly dispersed, heat to 45C with continued mixing. When a clear, uniform solution has developed, begin to add the ingredients of phase B in which they are listed, mixing moderately after each addition. Avoid air entrapment.

Description:

Crystal clear, viscous, pourable bubble bath. QUATRISOFT Polymer LM-200 provides conditioning by virtue of its cationic nature and inherent substantivity to the skin. GLUCAM E-20 contributes to the overall emollient afterfeel. SOLULAN L-575, along with GLUCAM E-20, helps overcome defatting from the anionic surfactant.

MILD CHILDREN'S BUBBLE BATH

RAW MATERIALS	% By Weight
MACKANATE EL	10.0
MACKANATE CP	10.0
Sodium Laureth Sulfate (30%)	9.0
Natrosol 250HHR	1.0
MACKSTAT DM	qs
Water, Fragrance, Dye qs to	100.0

Procedure:

1. Disperse Natrosol 250HHR in cold water.
2. Blend until completely dispersed.
3. Heat to 40 degrees C. and add remaining components.
4. Blend until clear.
5. Cool and fill.

SOURCE: McIntyre Group Ltd.: Personal Care Formulary: Formulas

BUBBLE BATH

RAW MATERIALS	% By Weight
Phase A:	
QUATRISOFT Polymer LM-200	1.0
Water	46.5
Phase B:	
Sodium Myreth Sulfate (58% active)	38.0
Lauramide DEA	7.0
GLUCAM E-20	3.5
SOLULAN L-575	4.0
Perfume and Preservative	q.s.

Procedure:

Disperse the QUATRISOFT Polymer LM-200 with good agitation in water at room temperature. When thoroughly dispersed, heat to 45C with continued mixing. When a clear, uniform solution has developed, begin to add the ingredients of phase B in the order in which they are listed, mixing moderately after each addition. Avoid air entrapment.

Description:

Crystal clear, viscous, pourable bubble bath. QUATRISOFT Polymer LM-200 provides conditioning by virtue of its cationic nature and inherent substantivity to the skin. GLUCAM E-20 contributes to the overall emollient afterfeel. SOLULAN L-575, along with GLUCAM E-20, helps overcome defatting from the anionic surfactant.

BUBBLING MILK BATH

RAW MATERIALS	% By Weight
Phase A:	
INCROSUL OTS	35.00
INCROMINE OXIDE C	3.50
INCROMIDE LR	2.00
CROVOL PK-70	5.00
Germaben II	1.00
Sodium Chloride	0.25
Deionized Water	48.25
Phase B:	
CRODAPEARL LIQUID	3.00
HYDROLACTIN 2500	1.00
Citric acid to pH 6.0+-0.5	

Procedure:

Combine Phase A with slight heating to 65C. When clear, stop heating, continue mixing, and cool to 45C. At 45C, add Phase B. Continue cooling and mixing to room temperature and adjust the pH.

This luxurious bubble bath incorporates INCROSUL OTS as the primary surfactant, giving long lasting and copious bubbles. The use of CROVOL PK-70, a mild, super fattening agent, and HYDROLACTIN 2500, provide the skin with a conditioned feel, leaving it soft and smooth.

SOURCE: Croda Inc.: HYDROLACTIN 2500: Formula BP-42

FOAM BATH, TRANSPARENT

INGREDIENTS	% By Weight
A Texapon NSO	80,000
Rewoteric AM-B 13	6,000
Perfume Oil	3,000
Demineralized Water	8,000
Phenonip	0,500
Sodium chloride	1,400
Sodium hydroxide (10% aq. solution)	0,100
Cremogen Rosemary forte 758 302	0,500
Cremogen Camomile forte 728 790	0,500

Manufacturing Process:

Mix all the ingredients well under stirring. With the addition of sodium hydroxide the pH-value can be adjusted to approx. 7.

Remark: Without any colour dye:

The yellow-brownish colouring of the foam bath depends on the native colouring of the plant extracts.

HIGH FOAMING SHOWER GEL

RAW MATERIALS	% By Weight
Standapol ES-3	20.0
INCRODET TD-7C	7.0
CROSULTAINE C-50	20.0
CROTHIX	1.0
CROVOL A-70	2.0
BHT	0.1
Disodium EDTA	0.1
Perfume	0.5
Germaben II	1.0
Deionized Water	48.3
pH-6.3 w/NaOH	

Procedure:

Combine the Standapol ES-3, Incrodet TD-7C, Crosultaine C-50, Disodium EDTA, Germaben II and deionized water with mixing. Combine the Crothix, Crovol A-70 and BHT with mixing and heat to 65-70C with mixing. Continue mixing the Crothix premix and cool to 50C. Add the perfume to Crothix phase and mix until uniform. When clear, add Crothix phase to the surfactant phase with mixing. Adjust pH to specification with NaOH solution.

pH:6.3. pH specification 6.0 to 6.5

Viscosity: 8,000 cps

This formula uses an optimized combination of CROSULTAINE C-50, INCRODET TD-7C and SLES to produce a clear, high foaming, low color, and low odor bath and shower gel. CROTHIX is used to provide the body and viscosity seen in the formula, and CROVOL A-70 is used to solubilize the fragrance and maintain the clarity of the product.

LOW IRRITATION FOAM BATH/BODY SHAMPOO

INGREDIENTS	% By Weight
Water	32.35
STANDAPOL SH-124-3	40.00
APG-600	12.00
LAMEPON S	9.00
STANDAMID LDS	3.00
STANDAMOX LAO-30	3.00
CETIOL HE	0.50
Kathon CG	0.05
Fragrance Novarome JL-67	0.10

Procedure:

Charge kettle with water. Add remaining ingredients, one at a time, under agitation. Adjust pH to 6.0+0.3 with 50% citric acid. Continue stirring until product is homogeneous. Fill off.

Comments:

The combination of APG-600 with the protein and sulfosuccinate contributes to the mildness of this formulation.

SOURCE: Henkel: Product Information APG: Formula H-4979

LOW IRRITATION SHOWER CLEANSER

INGREDIENT	% By Weight
Standapol ES-3	10.5
APG-600 SP	12.0
Lamepon S	8.0
Cetiol HE	0.5
Propylene Glycol	1.0
Cationic Guar C-261	0.35
Euperlan PK-810	3.0
Citric Acid	to pH 5.5-6.0
Water	Balance

Comment:

This elegant formulation provides a combination of gentle cleaning and skin moisturization.

SOURCE: Henkel: Use of APG Surfactants: Formula

MILD SHOWER CLEANSER

INGREDIENTS	% By Weight
Water	62.60
STANDAPOL ES-3	10.50
APG-600	12.00
LAMEPON S	9.00
CETIOL HE	0.50
EUPERLAN PK-810	3.00
Propylene Glycol	1.00
COSMEDIA GUAR C-261N	0.75
Sodium Chloride	0.50
Kathon CG	0.05
Fragrance V-4503	0.10

Procedure:

- 1) Charge kettle with water. Maintain moderate stirring while blending ingredients at room temperature. Add Standapol ES-3, APG-600, and Lamepon S.
- 2) Slurry Guar C-261N with Cetioli HE and propylene glycol. Stir until Guar is hydrated. Add to main batch under agitation.
- 3) Stir in Euperlan PK-810, Kathon CG, fragrance and sodium chloride, one at a time.
- 4) Adjust the pH to 5.5-6.0 with 50% citric acid.
- 5) Continue stirring until product is homogeneous. Fill off.

Comments:

This elegant formulation provides a combination of gentle cleaning and skin moisturization.

Formula H-4980

LIQUID SHOWER SOAP

RAW MATERIALS	% By Weight
Na a-Olefin Sulfonate, 40%	20.0
Sodium Lauroyl Sarcosinate, 30% (Hamposyl L-30)	10.0
Cocoamide MEA	3.0
Ammonium Chloride	2.0
Water, preservative, color, q.s.	100.0

Procedure:

Heat water and first two ingredients to 80C, add cocoamide MEA, stir until clear. Cool to 40C, add remaining ingredients and adjust to pH 5.0 w/citric acid.

Properties: Lathers richly without drying the skin.

FOAMING BATH OIL

RAW MATERIALS	% By Weight
Sodium Lauroyl Sarcosinate, 30% (Hamposyl L-30)	21.0
Sodium Laureth Sulfate, 28%	42.0
Cocoamide DEA	6.0
PPG-15 Stearyl Ether	10.0
Water, preservative, etc., q.s.	100.0

Procedure: Mix all ingredients. Stir until clear.

Properties: The PPG-15 stearyl ether provides emollient properties to this high foaming bath additive.

ABSORBANT FACIAL MASK FOR OILY SKIN

INGREDIENTS		% By Weight
A. Deionized Water		60.7
Magnesium Aluminum Silicate		1.5
Hydroxypropylmethylcellulose		1.5
Sorbitol		4.0
Methylparaben		0.2
Polysorbate 80		2.0
B. Stearic Acid		3.0
Glyceryl Stearate and PEG 100 Stearate	5.0	
Ceresine Wax		5.0
Stearyl Alcohol		2.0
Kaolin		8.0
C. Titanium Dioxide		1.0
Iron Oxides		0.2
Polyethylene		1.5
D. ELASTEIN 5000		4.0
E. Diazolidinyl Urea		0.3
Fragrance		0.1

Procedure:

Begin heating water to 80 degrees C, slowly sift in magnesium aluminum silicate. At 80 degrees C, sift in hydroxypropylmethylcellulose, add rest of Part A. Mix until uniform. Add Part B ingredients in order, mix until homogeneous. Premix iron oxides with titanium dioxide and polyethylene beads and sift into mixture. Blend until color is uniform. Slowly add ELASTEIN 5000, mix well, cool to room temperature. Add part E ingredients. Mix until homogeneous.

Description:

This astringent mask absorbs facial oils and exfoliates dead skin cells. ELASTEIN 5000 helps restore skin elasticity by binding needed moisture.

AIRY SKIN CONDITIONING MOUSSE

CONCENTRATE FORMULA	% By Weight
QUATRISOFT POLYMER LM-200	1.0
Propylene Glycol	2.0
Ethanol SD-40	15.0
Deionized Water	82.0
Preservative and Perfume	q.s.

Concentrate Procedure:

Mix ethanol with water at room temperature. Add QUATRISOFT POLYMER LM-200 and other ingredients with water/ethanol mixture using rapid stirring at room temperature until polymer is completely dissolved.

Aerosol Fill Procedure:

Fill Aluminum mousse can and charge with A-46 Propellant using a weight ratio of 100 parts of product to 20 parts of propellant.

Description:

The light airy and stable foam in this formula is produced solely by QUATRISOFT POLYMER LM-200. When applied to the skin, it breaks quickly, leaving a soft, velvety feel attributed to the cellulosic cationic QUATRISOFT POLYMER LM-200

Formula T-55-9-1

SKIN CONDITIONING MOUSSE

CONCENTRATE FORMULA	% By Weight
Phase A:	
SOLULAN 16	1.5
GLUCAM P-10	1.5
SOLULAN 98	2.0
Phase B:	
Deionized Water	78.5
QUATRISOFT POLYMER LM-200	0.5
Preservatives	1.0
Phase C:	
SD Alcohol 40	15.0

Concentrate Procedure:

Add QUATRISOFT POLYMER LM-200 to agitating water at 25C. Heat to 70C and mix until dissolved. Add preservatives to complete phase B. In a separate container add Phase A ingredients and heat to 70C with agitation. Add phase B to A and mix until uniform. Cool to 40C and add phase C. Cool to 25C when uniform.

Aerosol Fill Procedure:

Fill aluminum mousse can and charge with A-46 Propellant using 90% product and 10% propellant.

Description:

Aerosol skin conditioner with emollient feel during and after application.

MONAMID S	10.0

Procedure:

Add all ingredients and mix while heating gradually, being careful not to scorch, until melted and uniform. (approx. 95C). Pour into mold while hot. Allow to set.

Properties:

Appearance: Pale cream colored solid

pH (10% sol'n): 6.8

This formulation is easily prepared and forms a hard bar. Copious lather with a soap-like feel and a talc-like after-feel.

ANHYDROUS CREAM MAKEUP

RAW MATERIALS	% By Weight
AMERCHOL RC	5.0
MODULAN	5.0
SOLULAN PB-2	5.0
Petrolatum	40.0
Mineral Oil, 70 vis.	22.0
Microcrystalline Wax (190-195F m.p.)	8.0
Pigments, micronized	15.0
Perfume and Preservative	q.s.

Procedure:

Heat all ingredients except the pigment blend to 85C. Add the pigment blend to melted wax phase at 85C. Mix until uniform. Cool to 60C and pour.

Description:

In this glossy cream, AMERCHOL RC aids in pigment dispersion while also working to give color definition and shade uniformity. The combination of AMERCHOL RC with SOLULAN PB-2 and MODULAN gives excellent feel while helping to reduce the greasiness associated with the mineral oil and petrolatum. They also add emollience and the necessary tack to ensure good finger pickup while keeping the product in place during and after application.

EMULSION MAKEUP

RAW MATERIALS	% By Weight
Oil Phase:	
AMERCHOL L-101	4.5
AMERLATE P	0.9
Stearic Acid, XXX	2.7
Glyceryl Monostearate, neut.	1.8
Mineral Oil, 70 vis.	4.5
Water Phase:	
Propylene Glycol	4.5
Triethanolamine	0.9
Water	70.2
Titanium Dioxide, Talc & Pigments	10.0
Perfume and Preservative	q.s.

Procedure:

Add the water phase at 85C to the oil phase at 95C while stirring. Continue mixing, and cool to 30C. Add to the micronized powder blend in increments, mixing well after each addition.

Description:

Glossy emulsion makeup with rich creamy feel. Spreads and blends easily. A heavy-viscosity fluid that gives light coverage.

SOURCE: Amerchol Corp.: AMERCHOL Series: T33-21-4/4R

ANHYDROUS MAKE-UP BASE

RAW MATERIALS	% By Weight
A. MIGLYOL 812	80.0
DYNASAN 118	20.0
B. Pigment:	
Titanium Dioxide	3.0
Talc	3.0
Zinc Oxide	3.0
Sicomet-Brown 70	0.3
Sicomet-Brown 75	0.3

Preparation:

MIGLYOL 812 is heated up to ca. 69C., in a container having good temperature control. Dynasan 118 is stirred into the Miglyol 812. The mass is then stirred until cooled. Important: Dynasan 118 cannot be completely dissolved, but rather partially dissolved (note temperature).

90.4g of this mass is worked very well into the finely ground pigment little by little.

It is advantageous to homogenize the make-up before filling.
Formula 2.1E

* Patent No. 4,659,573

Manufacturing Procedure:

1. In main kettle, under variable speed Lightnin' mixing, heat Sequence 1 ingredients to 75C.
2. In side kettle, under Lightnin' mixing, heat Sequence 3 ingredients to 78C.
3. In small kettle, under Lightnin' mixing, thoroughly disperse Sequence 2 ingredients. Mix until there are no fish eyes.
4. At proper temperatures, add combined Sequence 3 ingredients to combined Sequence 1 ingredients under Lightnin' mixing. Maintain temperature for 15 minutes. Begin cooling.
5. Remove Lightnin' mixer. Add side-wiping-double action blades. Add premixed Sequence 2 ingredients at 65-70C. Stir in thoroughly.
6. Cool to 45C. Add Sequence 4 ingredients and disperse thoroughly. Cool to 42C. Add Sequence 5 ingredient and disperse thoroughly. Cool to 25C.

CLEAR BODY/FACIAL CLEANSER AND SHAMPOO

RAW MATERIALS	% By Weight
Ammonium Lauryl Sulfate (28%)	25.0
MACKANATE EL	20.0
MACKAM 35HP	8.0
MACKERNIUM 007	0.5
MACKALENE 426	2.5
MACKSTAT DM	Q.S.
Water, Dye, Fragrance q.s. to	100.0

Procedure:

1. Dissolve MACKERNIUM 007 in water.
2. Add remaining components and heat to 40 degrees C.
3. Blend until clear and adjust pH to 5.0-6.0 with citric acid.
4. If needed, add sodium chloride to adjust viscosity to 5,000 cps.

pH: 5.7

Viscosity (cps): 6800

CLEAR EYE GEL

RAW MATERIALS	% By Weight
Deionized water	57.75
Carbomer 940 (3% aqueous slurry)	25.00
Triethanolamine (10% aqueous solution)	11.25
GLUCAM E-10	5.00
BIOCARE SA	1.00
Perfume and preservative	q.s.

Procedure:

Add Carbomer 940 slurry to water with gentle agitation; when fully dissolved mix in remaining ingredients, triethanolamine last. Slowly mix to avoid air entrapment until gel is formed.

Description:

Soft gel for easy application near eye area. Facial stress lines and wrinkles are effectively lifted and masked by BIOCARE SA, a "skin-activated" complex, resulting in a soft smooth appearance. GLUCAM E-10 helps maintain moisture necessary for this delicate area.

SOURCE: Amerchol Corp.: BIOCARE SA: Formula T61-133-8

CLEANSING GEL

RAW MATERIALS	% By Weight
UCARE Polymer SR-10	0.30
POLYOX WSR N-3000 (1% Aq. Solution)	5.00
GLUCAM E-20	1.00
Cocobetaine (43%)	4.45
Citric Acid	0.29
Cocamide DEA	5.00
Ammonium Lauryl Sulfate (28%)	53.57
Glycol Distearate	0.75
Deionized water	29.64
Perfume and preservative	q.s.

Description:

Off-white, slightly pearlescent, flowing cleansing gel. Can be used for all conditioning, cleansing applications. UCARE Polymer SR-10 imparts a substantive film on the skin which reduces the irritation potential of the surfactant while conditioning as well. GLUCAM E-20 improves foam properties. Formula can also be used as a shave gel where POLYOX WSR N-3000 adds slip to ensure a smooth shave by reducing razor drag.

SOURCE: Amerchol Corp.: UCARE Polymers: Formula T54-199-1

CLEAR RINGING GEL

RAW MATERIALS	Sequence	% By Weight
Lipocol SC-15	1	2.0
Lipolan 31	1	10.0
Mineral Oil Carnation	1	15.0
Lipamide LMWC	1	5.0
Lipocol L-4	1	5.0
Glycerine	2	5.0
Water	2	58.0
Preservative (Sorbic Acid or Potassium Sorbate)	2	q.s.
Color	2	q.s.
Perfume	3	q.s.

Procedure:

Combine Sequence 1 ingredients and heat to 75C. Combine Sequence 2 ingredients and heat to 75C. Add Sequence 1 to Sequence 2 while stirring slowly. Add Sequence 3 when cooled to 45C. Stop stirring when cooled to 40C to avoid air entrapment.

SOURCE: Lipo Chemicals Inc.: Formula No. 184

MOISTURIZING GEL

INGREDIENTS	% By Weight
Carbopol 941, 2% aq. soln. (pH adjusted to 5.0)	75.20
Schercoquat ALA, 1% aq. soln.	22.55
Schercotaine CAB-G (35%)	2.25

Procedure:

1. Prepare 1% aq. solution of Schercoquat ALA by dissolving it in hot water, approx. 80C.
2. Mix Schercoquat ALA Solution and Schercotaine CAB-G into Beaker A.
3. In a separate Beaker B, heat Carbopol 941 solution to 70-75C, while mixing.
4. Slowly add A to B while mixing. Mix until solution is homogeneous, maintaining temperature of 70-75C.
5. Cool to room temperature while stirring.

COMPACT ROUGE BASE

RAW MATERIALS	Sequence	% By Weight
Liponate IPM	1	23.21
Ganex V-220	1	10.20
Ozokerite Wax 170 MF	1	42.88
Multiwax 195 M	1	12.26
Lipovol SES-S	1	4.09
Lipovol A-S	1	6.13
Propylparaben	1	0.41
Vitamin E	1	0.82

Procedure:

Weigh Sequence 1 ingredients into a steam-jacketed kettle. Heat to 80-85C, mix well until homogeneous. Use molten to manufacture compact rouge #187 or store in receptacle which allows melting. Material is a solid at room temperature.

Formula No. 187A

PROTECTIVE EMULSION FILM

RAW MATERIALS	Sequence	% By Weight
Deionized Water	1	2.60
Carbopol 934 (2% disp'n)	1	10.00
Lipo PE Base EG-557	1	55.00
Perlatum 410CG	2	15.00
Copolymer 3225C	2	10.00
Liponate NPGC-2	2	5.00
Lipomulse 165	2	2.00
Triethanolamine 99%	3	0.20
Deionized Water	3	0.20

Procedure:

1. In main kettle, combine Sequence 1 ingredients under Lightnin' mixing and heat to 75-78C.
2. In auxiliary kettle, combine Sequence 2 ingredients under Lightnin' mixing and heat to 80C.
3. At proper temperatures, add Sequence 2 to Sequence 1 switching to sweep mixing when batch thickens. Begin cooling to 70C.
4. At 70C, add premixed Sequence 3 to batch and continue to cool under slow sweep to 25C.

CREAMY FROSTED EYESHADOW, CREASE RESISTANT

INGREDIENTS	% By Weight
Part A:	
Sandopan KST	10.70
Stearic Acid	5.30
Velsan P8-3	5.30
Part B:	
Water, preservatives, fragrance	Q.S.
Part C:	
Cloisonne Copper	25.00

Procedure:

Heat and melt Part A. Heat Part B. Add A to B. Cool and add Part C.

An emollient, but crease-resistant eye shadow emulsion. Silky feel and moisturizing properties.

SOURCE: Sandoz Chemicals Corp.: Formulation No. CPP-01

LONG WEARING PRESSED EYESHADOW

RAW MATERIALS	% By Weight
A. Talc, USP	48.50
Mica	15.00
Sericite	15.00
Zinc Stearate	1.50
Pigments (FD&C, D&C, Iron Oxides, Ultramarines, Titanium Dioxide)	15.00
B. TEGOSOFT 189	0.40
ABIL Wax 9801	0.30
ABIL WAX 2434	0.30
Mineral Oil	4.00
Fragrance, Preservatives	QS

Procedure:

Mix all ingredients of part A in a blender. Combine the ingredients of B part and spray or slowly add to part A using a blender. Pulverize through a screen. Press into godets.

The long wearing properties of this eyeshadow are enhanced by the pigment dispersion. The pigment dispersion is optimized by the use of Cetyl Dimethicone and Stearoxy Dimethicone. The Isostearyl Isononanoate contributes to the creamy application.

ENRICHED MAKEUP FOUNDATION

RAW MATERIALS	% By Weight
Part A.	
PHOSPHOLIPID EFA	3.00
Steareth-20	3.25
0.5% Kelzan AR in 0.1% NaCl	67.50
Pigment	15.00
Methyl Paraben	0.25
Part B.	
Steareth-2	1.75
Cetearyl Alcohol	2.50
Myristyl Myristate	3.00
Isopropyl Myristate	2.50
Dow Fluid 200/100 cs.	1.00
Propyl Paraben	0.25

Procedure:

Combine ingredients in phases A and B as shown and heat to 55C. Blend phase B into phase A with sufficient homogenization to ensure good emulsification. Stir cool to 40C., add fragrance, and package.

Comments:

This liquid foundation is enhanced by the presence of PHOSPHOLIPID EFA which may help bind pigment to skin for a longer lasting application. Further benefits include a non drying afterfeel and a reduction in epidermal water loss through the use of PHOSPHOLIPID EFA.

ESSENTIAL SKIN MOISTURIZER

RAW MATERIALS	% By Weight
Deionized water	94.5
CELLOSIZ E POLYMER PCG-10	0.5
GLUCAM E-10	2.0
Glycerin	2.0
BioCare SA	1.0
Preservative and perfume	q.s.

Procedure:

Disperse CELLOSIZ E POLYMER PCG-10 in water; facilitate mixing with gentle heating. When solution is clear, add GLUCAM E-10 and glycerin and cool to room temperature. Add BioCare SA and perfume below 35C.

Description:

Clear flowing gel. BIOCARE SA, a "skin-activated" complex, effectively lifts and masks wrinkles and facial lines, and provides an emollient afterfeel. This simple system provides excellent slip during rub-in, spreading to a thin, nongreasy film. GLUCAM E-10 enhances the exceptional humectant properties of the Hyaluronic Acid in BIOCARE SA. Effective as an all-day moisturizer or overnight replenisher.

Formula T61-140-1

HYDROALCOHOLIC FACIAL TONER

RAW MATERIALS	% By Weight
Deionized water	48.35
Alcohol-SD 40	48.35
Witch Hazel	2.00
Menthol, USP	0.30
BIOCARE SA	1.00
Color and preservative	q.s.

Procedure:

Dissolve menthol in water with mixing. Add remaining ingredients. Mix until clear.

Description:

Clear, cooling formula suitable for skin cleansing and freshening. BIOCARE SA, a "skin-activated" complex, effectively improves appearance and feel of skin by tightening and lifting wrinkles and facial lines resulting in a non-tacky, smooth surface.

Formula T61-127-1

EYE SHADOW CREAM
WATERPROOF

RAW MATERIALS	% By Weight
Phase A:	
Dow Corning 3225C	5.0
Bentone Gel SIL	21.0
Isododecane Soltrol 100	24.0
Witconol 14	2.0
Antaron V-220	8.0
Phase B:	
Germall 115	0.2
Sodium chloride	1.0
Water	18.8
Phase C:	
Pearl pigments	20.0

Manufacturing Procedure:

Oily phase A:

Antaron V-220 is added to Solvent ID and dissolved by heating to about 50-60C. All other ingredients of the oily phase A are added and the suspension is homogenized with an Ultra Turrax.

Manufacturing of the eye shadow:

Phase A and pearl pigment are heated to 60C under stirring--then the cold aqueous phase is added and the mixture is homogenized for about 1 minute.

FACIAL CLEANSER

INGREDIENT	% By Weight
Part A:	
Deionized Water	89.55
Cocoamphodiacetate (Miranol C2M Conc. NP)	1.00
Quaternium-15 (Dowicil 200)	0.10
Methylparaben	0.10
Propylparaben	0.05
Part B:	
Isostearyl Benzoate (Finsolv SB)	4.00
Dioctyl Maleate (Bernel Ester DOM)	2.00
Caprylic/Capric Triglyceride	1.00
Octyl Hydroxystearate (Wickenol 171)	1.00
Permulen TR-2	0.20
Carbopol 980	0.60
Part C:	
Aminomethyl Propanol (95%) (AMP-95)	0.40

This cleansing formulation is light, non-greasy and water-rinsable. It provides thorough cleansing without drying the skin.

SOURCE: Angus Chemical Co.: Formula PF-0164: Suggested by B.F. Goodrich Chemical

FACIAL CLEANSER

RAW MATERIALS	% By Weight
Water	78.0
MONAMATE LA-100	12.0
PHOSPHOTERIC QL-38	10.0

Procedure:

Add ingredients in order listed while warming to 50C. Adjust to level desired with 50% citric acid while warm. The product may require 24 hours or more to set up to a soft paste or cream consistency.

This bright white non-greasy cleanser has the consistency of whipped cream. Its very mild, high foaming lather cleans completely and leaves the skin with a soft talc feel. It can be used as is or enhanced by addition of emollients.

SOURCE: Mona Industries, Inc.: Formula C-259

FACIAL GEL

RAW MATERIALS	% By Weight
Water	50.0
Sipon ES-2	30.0
PHOSPHOTERIC QL-38	20.0

Procedure:

Add ingredients in order listed with agitation. Adjust pH to 6.0. Add color, fragrance and preservative as required.

This formulation gently cleanses while leaving a soft talc like after feel to skin.

Formula F-483

NIGHT TIME MOISTURIZER

RAW MATERIALS	% By Weight
I. PHOSPHOLIPID EFA	4.00
Carbowax 1450	2.00
Glycerine	2.00
Water	73.00
II. Brij 72	2.50
Lanette O	4.00
Myristyl Myristate	4.00
Cutina CP	4.00
Isopropyl Palmitate	3.00
Dimethicone 100 c.s.	1.50

Procedure:

Combine ingredients for (I) and (II) separately and heat to 65C. Homogenize (II) into (I) with continued heating until sufficiently mixed. Stir-cool to 45C. Add fragrance, color, preservative and pack.

This creme is designed specifically for use in the facial area after washing or bathing. The combination of humectants and emollients together with the skin conditioning of the PHOSPHOLIPID EFA provides a powerful barrier to drying while enhancing skin feel.

Formula F-495

SOURCE: Mona Industries, Inc.: Formulas

FACIAL MOISTURIZER

INGREDIENTS	% By Weight
A. Deionized Water	77.9
Carbomer 940	0.5
Sorbitol	1.0

FACIAL TONER FOR OILY SKIN

INGREDIENTS	% By Weight
A Ethylalcohol (96Vol.%) denatured	10,000
Perfume Oil	0,100
Cremophor RH 455	0,500
B Demineralized Water	78,600
Potassium sorbate	0,300
Cremogen M-82 730 337	5,000
1,2-Propylene glycol	5,000
D-Panthenol	0,500

Manufacturing Process:

Part A: Dissolve perfume oil and Cremophor RH 455 in the ethyl alcohol.

Part B: Dissolve all ingredients in water and add to part A while stirring.

Allow to store the facial toner for 2-4 weeks at low temperatures (approx. 5-10C). Then filter the facial lotion with fine clarifying sheets at this temperature.

Remark: Without any colour dye:

the yellow-brownish colouring of the facial toner depends on the native colouring of the plant extract.

Sodium C14-16 Olefin Sulfonate (40%)	30.00
Cocamidopropylbetaine	6.70
Cocamide DEA	2.00
Glycol Stearate	1.00
Ammonium Chloride	2.50
Citric Acid	qs to pH 6.0
Methylparaben	0.15
Propylparaben	0.05
Water	qs to 100
ACUSCRUB 50	5.00

Procedure:

Heat water to 70C. Slowly add all ingredients, except ACUSCRUB 50 and mix until homogeneous. Cool to 55C. Mix and add ACUSCRUB 50.

SOURCE: Allied-Signal Inc.: ACUSCRUB Mild Abrasive: Formulas

GEL FACIAL CLEANSER

RAW MATERIALS	% By Weight
Water	52.1
Methyl Paraben	0.2
MONAMATE OPA-30	16.7
MONATERIC CSH-32	16.7
MONATERIC ISA-35	14.3

15.6% active

Mixing Procedure:

Add ingredients in the order listed while warming to 50C, using slow agitation. Adjust pH while hot with phosphoric acid and pack warm. At pH 6.0 viscosity is approximately 35,000 cps.

This is non-irritating to eyes and skin, offers excellent rinseability and leaves skin soft and smooth.

MILD CONDITIONING FACIAL CLEANSER

RAW MATERIALS	% By Weight
Sodium Laureth Sulfate (1 mole EO) (25% active)	28.0
MONAMATE C-1142	12.5
MONAMID 1089	3.0
MONAQUAT P-TC	2.5
Cerasynt IP	1.5
Preservative	0.3
Water	52.2

Procedure:

Mix all ingredients into water stirring between additions. Heat while mixing to melt the solid materials (approx. 70C). Cool with stirring. At <40C add perfume and colors. Adjust pH to 5.0-6.0.

Properties:

Appearance (25C): Pearled liquid
Nominal Activity: 17%

In this formulation, MONAMATE C-1142 provides mild, effective cleansing while MONAQUAT P-TC softens and conditions the skin.

GENTLE MAKEUP REMOVER WITH NATURAL INGREDIENTS

INGREDIENT	% By Weight
Deionized Water	56.8650
Carbomer 940	0.2000
Tensami 1/05 AMI	1.0000
Amigel, 2% Aq. Soln.	25.0000
Tri-Sept M	0.2000
Tristat IU	0.2000
Tensami 8/09	10.0000
Demaquillant 687 LS	3.0000
Jojoba Oil	3.0000
Vitamin E Acetate	0.0150
Tri-Sept P	0.1000
Allerderm No. M-3012	0.2000
Triethanolamine 99%	0.2200

Procedure:

Disperse the Carbomer in water in main tank while heating to 75C.

Add the Tensami 1/05, Amigel Solution, and Methylparaben with prop agitation.

Mix the Tensami 8/09, Jojoba, Vitamin E, and Propylparaben at 75C.

Add the oil phase to the main tank with prop agitation and mix until uniform.

Switch to sweep agitation and begin cooling to 50C.

Add the TEA and Tristat IU while cooling to 50C.

Continue cooling; add perfume and Blend 687 LS at 45C.

Cool to room temperature.

A gentle makeup remover based on plant extracts, natural emulsifiers and natural oils.

Sodium borate	0.15
B Sorbitol, 70% Soln.	21.60
Arlacel 186	2.40
Marcol 130	14.50
Petrolatum	5.00
Nimlesterol D	2.50
Waxenol 821 S.B.	3.00
Preservative	q.s.

Procedure:

Add VEEGUM to the water slowly, agitating at maximum available shear until smooth. Add sodium borate slowly with mixing until uniform. Heat to 70C. Heat B to 75C. Add A to B and mix until smooth and uniform.

Formula No. 379

ULTRA RICH HAND AND BODY NOURISHER

INGREDIENT	% By Weight
A VEEGUM Ultra	1.50
Deionized Water	79.00
B Glycerin	3.00
Aloe Vera Gel	2.00
C LIPACIDE PCO	1.00
Cetyl Esters	1.00
Glyceryl Stearate SE	2.50
Isopropyl Palmitate	5.00
Sorbitan Palmitate	2.25
Polysorbate 40	2.75
D Preservative, Fragrance	q.s.

Procedure:

Heat the water to 55C. Add VEEGUM Ultra slowly while mixing at 500 rpm with a propeller stirrer. Increase mixer to 1500-1700 rpm and mix for 30 minutes while maintaining temperature at 55C. Add B to A and mix until uniform. Heat C to 60C and add to (A and B). Mix (A, B and C) for 30 minutes. Avoid air entrapment. Slow mixer to 1000 rpm and mix while cooling to 35C. Add D and mix until uniform. Package.

Features:

It features the "dry touch" application properties. Anti-irritant. VEEGUM Ultra whitens and brightens this cosmetic formula.

B. Pigments	3.00
ABIL Wax 9801	0.40
Castor Oil	4.00
C. Titanium Dioxide (and) Mica	11.00
D. Fragrance	QS

Procedure:

Melt part A together at 80C. Mix. Grind the pigments of part B into the oils and waxes of part B using a triple roll mill. Add to part A. Mix at 80C. Add part C. Cool to 55C. Add fragrance. Mold.

The long wearing characteristics of this lipstick are enhanced by the use of Cetyl Dimethicone in the pigment grind. The Behen-oxy Dimethicone contributes both to gloss and to the creamy texture. The C24-28 Alkyl Dimethicone contributes gloss and structure to the stick. The Isostearyl Isononanoate provides slip and emolliency.

Ritachol	8.0
Lanapene	7.0
70% Sorbitol Solution	5.0
Witcamide 511	1.5
Preservatives	q.s.

Procedure:

Add the Veegum to the water slowly, agitating continually until smooth. Grind B and add to A, mixing until uniform. Add A and B to C and mix until smooth and uniform.

An economical, cold process W/O emulsion. An elegant moisturizing makeup for dry skin. No color streaking or settling. The makeup spreads smoothly with a rich, non-greasy feel, leaving a uniform pigment film plus the effective emollients and moisturizers of the external phase. This formula would be a suitable base for a line of luxurious makeups for the mature woman with dry skin problems.

"MATTE-FINISHED" MAKE-UP

RAW MATERIALS	% By Weight
A) Schercemol CO	7.0
Schercemol DID	1.0
Arlacel 60	3.0
Glucamate SSE 20	3.0
Schercemol GMS	0.5
Dow Silicone fl. 350 cps	1.0
Escalol 507	1.0
B) Veegum (4% aq.)	15.0
Water	55.0
Glycerin	2.0
Germaben II	1.0
C) Pigments:	
Talc 141 BC	2.1
Titanium Dioxide 328	6.4
7055 Iron Oxide Yellow	0.45
7061 Iron Oxide Brown	0.8
7054 Iron Oxide Red	0.25
D) Cucumber Extract	0.50

Procedure:

Part B:

1. Disperse Veegum slurry in water until uniform.
2. Add the rest of the water phase, mixing well.

Part C: Mix part C.

3. Add Part C to Part B and mix for 5 minutes or until fully dispersed.

In main beaker mix ingredients of Phase A.

Heat both Phases A and Part B & C to 70C. Add Phase B, C to A with moderate agitation.

Cool batch to room temperature with continuous mixing, then add Part D.

MULTI-PROTECTION SKIN MOISTURIZER (CATIONIC)

INGREDIENTS	% By Weight
Phase A:	
Cetyl Alcohol	2.00
Drakeol 7	3.00
Petrolatum	1.00
Trivent NP-13	2.50
Abil B 8852	1.00
Cerasynt 945	1.00
Dow Corning 200 Fluid, 350 CS	0.20
Vitamin E Acetate	0.20
Brij 721	1.00
Phase B:	
Deionized Water	70.90
Monaquat P-TS	2.00
Allantoin	0.50
Aloe Vera Gel 1:1	5.00
CELQUAT SC-240	0.50
Propylene Glycol	4.00
DRY FLO-C	4.00
Phase C:	
Germaben II E	1.00
Phase D:	
Fragrance Q-4698	0.20

Procedure:

Heat water, Monaquat and Allantoin to 50C. Add CELQUAT SC-240, disperse thoroughly and heat to 80C. Prepare Propylene Glycol and DRY FLO-C slurry and add to water phase. Mix Phase B and heat to 80C. Add Phase B to Phase A at 80C and mix for 15 minutes. Cool to 35C and add Phase C and Phase D to it. Cool to room temperature and homogenize.

pH: 5.8

This is a soft elegant cationic lotion with fast rub-in resulting in a non-greasy, moisture barrier film leaving the skin with a luxurious feel. The lotion provides conditioning, moisturizing, and protecting effects to the skin. This formula has compatibility with the skin's pH resulting in a more comfortable feeling after its use.

PEELABLE LIQUID FACE MASK

INGREDIENTS	% By Weight
Part A:	
Water, deionized	61.5
VINOL polyvinyl alcohol resin	8.0
Propylene glycol	6.0
KELTROL T xanthan gum	0.5
Color	to suit
Part B:	
SDA alcohol (40-2)	20.0
AMEROXOL DE-20 oleth-20	4.0
Preservatives	to suit

Procedure:

Part A:

1. Hydrate KELTROL T in the deionized water using a high-shear mixer for 10-15 minutes.
2. Heat to 93C (200F).
3. Add the polyvinyl resin and mix until dissolved.
4. When fully dissolved, add the propylene glycol.
5. Cool to 38C (100F).

Note: If color is used, add it after hydrating the gum and before adding the resin.

Part B:

1. Dissolve the oleth-20 in the alcohol.
2. When Part A has cooled to 38C (100F), add Part B.
3. Mix thoroughly.

4. Cool with mixing to 45C, add Sequence 4 (fragrance), mix until clear.
5. Cool with mixing to 25C.

Note: As an alternative to heating the entire batch, the Sequence 3 materials can be pre-dissolved with heating in the Sesame Oil and this mixture added to the batch.

This luxurious emollient oil is designed for application to all parts of the body. It spreads rapidly without tack or drag and leaves the skin soft and supple without greasiness.

STYLING MOUSSE
WITH PEARL PIGMENTS

COMPOSITION	% By Weight
Luviskol VA 64	2.0
Dehyquart SP	0.6
Gafquat 755 N	1.4
Cetiol HE	1.0
Ethanol	3.0
Pearl pigment	1.0
e.g. TIMIRON Super Violet or DICHRONA YG	
Water, demineralized	ad 100.0

Manufacturing process:

The different ingredients have to be solved or suspended in warm water by stirring. Then the suspension is to be filled in cans under addition of propellant gas.

As propellant a mixture of Propan/Butan can be recommended in ratio of 25:75.

Proportion suspension/propellant about 92:8.

Valve: ST-10 (Aluminum plate, without microflex lacquer)

4-slit-box, stem-hole 1X.018, without suction pipe.

Foam head: ST 500

Shake well before use!

TRANSPARENT MASCARA
NO COLOR MASCARA

RAW MATERIALS	% By Weight
Propandiol (1,2)	2.0
Water, demineralized	75.0
Germall 115	0.2
Pearlpigment (e.g. TIMIRON Starlight Colors)	0.03-0.05
Carbopol 940	0.2
Ethanol (95%)	3.0
Triethanolamine	0.2
Water, demineralized	18.4
Luviskol K30	1.0

Preparation of the Gel:

The pigment is dispersed in the Propandiol-Water solution containing Germall. Carbopol 940 is added and dissolved under stirring, and stirring is continued until a clear solution is obtained. Then Ethanol and the TEA/water mixture are added successively. Finally Luviskol K30 can be added to soften the gel.

TRANSLUCENT FACE POWDER WITH HUMECTANT PROTEIN

INGREDIENTS	% By Weight
A. Talc	74.0
Magnesium Stearate	6.0
Cyclomethicone	12.0
Acrylates Copolymer	3.0
B. POLYPRO 15000	2.0
C. Methylparaben	0.2
Imidazolidinyl Urea	0.2
D. Talc	1.9
Iron Oxides	0.7

Procedure:

Combine Part A in a suitable vessel, blend until uniform. Slowly add Hydrolyzed Collagen, mix well. Add Part C ingredients in order, mix until homogeneous. Mill premix D to a uniform particle size, add to mixture and blend until the product has a homogeneous consistency.

Description:

This fine powder absorbs facial oils and keeps makeup looking fresh. The addition of Hydrolyzed Collagen helps bind moisture to the skin and add durability to foundation makeup.

FACE MASK CONCENTRATE FOR OILY SKIN

RAW MATERIALS	% By Weight
78-1898	40.00
Veegum F	20.00
Citric Acid	10.00
Kaolin	30.00
Preservative, Fragrance	QS

Procedure: Blend the powders until uniform.

Directions for Use:

Add enough water to form a spreadable paste, about 1 part concentrate to 1 part water. Apply to face and allow to dry. Remove with warm water.

SOURCE: National Starch and Chemical Corp.: Formula 4015-60C

W/O CREAMY FOUNDATION

RAW MATERIALS	% By Weight
A CRODAMOL PMP	1.00
CRILL 6	2.00
SYNCROWAX HR-C	3.20
Squalene	3.50
Silicone L-45	3.00
Di-Octyl Adipate	2.00
B Pigments:	
A1160 Brown Iron Oxide	1.00
A1301 Yellow Iron Oxide	0.50
A1249 Red Iron Oxide	0.50
Talc 1003	12.00
574 Titanox 1000	1.00
C Water deionized	66.80
Glycerin	2.00
Magnesium Sulphate	0.70
Methyl paraben	0.20
Propyl paraben	0.10
Biopure 100	0.50

Procedure:

Heat Phase A to 75-80C. Heat Phase C to same temperature respectively. Add the aqueous phase to oils under very slow agitation to ensure maximum stability of the w/o phase. Pulverize Phase B until homogeneous and no streaking of colors is evident. Allow the emulsion to cool to 55C, then add pigments. Continue stirring and fill off at room temperature.

A low solids w/o makeup base designed for normal to dry skin. CRILL 6, Sorbitan Isostearate, imparts water resistant properties as well as emulsification, so the make-up is not displaced by perspiration. SYNCROWAX HR-C, Glyceryl Tribehenate, adds a cushioned feel and stabilization needed in a water-in-oil system. CRODAMOL PMP, a light non-greasy ester, gives good spreadability and play time.

SOURCE: Croda Inc.: CRILLS AND CRILLETS: Formula MU-52

W/O LIQUID MAKEUP - OIL FREE

RAW MATERIALS	% By Weight
Phase A:	
ABIL WE-09	4.50
ABIL B 8839	10.50
ABIL Wax 9801	1.00
Synthetic Wax	0.45
Hydrogenated Castor Oil	0.45
Phase B:	
Talc, USP	5.00
Titanium Dioxide	5.00
Iron Oxides	3.70
Phase C:	
Water	68.90
Sodium Chloride	0.50
Preservatives, Fragrance	QS

Mix the ingredients of Phase A together, heat to 70C. When uniform, cool to 50C. Add Phase B. Mill. Heat water to 50C. Add the sodium chloride. Mix. Gently stream into Phase A/B with lightning mixer. Cool to 35C, add preservatives and fragrance. Homogenize. A very stable soft creamy lotion results with a good pigment dispersion.

A W/O emulsion based liquid makeup with improved pigment grinds. Superior application and wear due to the emulsification system.

W/O LIQUID MAKEUP: COLD MIX FORMULA

RAW MATERIALS	% By Weight
Phase A:	
ABIL WE-09	5.0
ABIL Wax 2434	3.0
ABIL B 8839	9.0
Caprylic/Capric Triglyceride	6.0
Titanium Dioxide	4.0
Iron Oxides	1.0
Phase B:	
Propylene Glycol	3.0
Sodium Chloride	0.8
Water	68.2
Phase C:	
Fragrance	Q.S.
Preservatives	Q.S.

Procedure:

1. In a vessel, grind the Titanium Dioxide and pigments into the rest of the ingredients of Phase A.
2. In a separate vessel, blend the ingredients of Phase B.
3. Slowly with agitation, add Phase B to Phase A. Mix until uniform.
4. Add the ingredients of Phase C with agitation.
5. Homogenize and dispense.

AEROSOL HAND CREAM MOUSSE

RAW MATERIALS	% By Weight
Oil Phase:	
CRODAMOL PMP	1.5
SUPER CORONA LANOLIN	2.5
CRILLET 3	3.0
Stearic Acid XXX	5.35
Water Phase:	
Deionized water	85.15
Glycerin	2.5
Perfume, preservatives	qs

Procedure:

Combine oil phase and heat to 70C with mixing. Heat water phase to 70C. Add water phase to oil phase. Cool. At 45C add fragrance. Cool to room temperature and fill.

Fill: 90% Concentrate, 10% Propellant A46

This hand cream mousse is appropriate for family or industrial use, where the hygiene of an aerosol dispenser is important. CRODAMOL PMP helps to modify and improve the otherwise heavy emollience of the other components.

Formula SC-152

NON-STRIPPING CLEANSING CREAM

RAW MATERIALS	% By Weight
Oil Phase:	
POLAWAX	15.00
CRODACOL C-95	1.00
SUPER REFINED Sesame Oil	7.50
SUPER REFINED Apricot Kernel Oil	7.00
CRILL 6	3.00
Water Phase:	
AMINOFOAM C	.50
Germaben II	1.00
Silicone F754	2.00
Water, deionized	63.00

Procedure:

Heat the oil phase to 75C, heat the water phase to 75C. Add the water phase to the oils. Continue stirring to room temperature. pH 6.80

An effective cleansing cream that exhibits good oil solubilizing without stripping the skin. CRILL 6 is the auxiliary emulsifier and solubilizer. SUPER REFINED vegetable oils act as oil solubilizers. AMINOFOAM C provides exceptionally good rinse-off.

Formula SC-139

ALL-PURPOSE DRY SKIN CREAM

FORMULA	% By Weight
Water Phase:	
GLUCQUAT 100	1.0
Deionized water	83.0
Oil Phase:	
GLUCAM P-20 Distearate	2.0
GLUCATE DO	0.5
PROMULGEN D	4.5
ACETULAN	2.0
CETAL	1.0
Mineral oil, 70 vis.	5.0
Cetyl Palmitate	1.0
Perfume and preservative	q.s.

Procedure:

Dissolve GLUCQUAT 100 into deionized water, and heat to 80C with adequate agitation. Combine oil phase ingredients, and heat to 80C with propeller mixing. Slowly add water phase to oil phase, and mix until uniform. When material starts to thicken during cooling, change to slow sweep agitation.

Description:

GLUCQUAT 100 provides skin conditioning while acting together with the GLUCAM P-20 Distearate to maintain moisture in the skin. GLUCATE DO (w/o) and PROMULGEN D (o/w) act as a nonionic emulsifier pair. ACETULAN imparts a smooth, velvety afterfeel while improving rub-in.

BARRIER CREAM
COLD MIX FORMULA

RAW MATERIALS	% By Weight
Phase A:	
ABIL WE-09	5.0
Decyl Oleate	5.0
Caprylic/Capric Triglyceride	5.0
Isopropyl Myristate	5.0
Silica	0.5
Phase B:	
Sodium Citrate (solution)*	20.0
Water	58.7
Hydroxyethylcellulose	0.8
Phase C:	
Fragrance	Q.S.
Preservatives	Q.S.
* 100 G Sodium Citrate/1 liter water. pH adjusted to 5.0 with Citric Acid.	

Procedure:

1. In a vessel, blend together the ingredients of Phase A until uniform.
2. In a separate vessel, disperse the Hydroxyethylcellulose into the water.
3. Add Phase B slowly to Phase A with agitation.
4. Add Phase C, mix until dispersed.

MOISTURIZING CREAM
COLD PROCESS W/O

RAW MATERIALS	% By Weight
Phase A:	
ABIL WE-09	5.0
Mineral Oil	5.0
Caprylic/Capric Triglycerides	5.0
Isopropyl Myristate	5.0
Silica (Aerosil R812)	0.5
Phase B:	
Water	77.9
Sodium Chloride	0.8
Tylose H20	0.8
Preservatives	Q.S.
Perfume	Q.S.
Color	Q.S.

Procedure:

1. Mix the oils of Phase A together. Slowly add the silica. Mix well.
2. Dissolve the sodium chloride in the water. With fast agitation, add the hydroxyethyl cellulose. Mix until uniform.
3. Add Phase B slowly into Phase A with agitation.
4. Homogenize.
5. Preservatives, perfume and color can be added at anytime.

CHAMOMILE CREAM W/O

SUBSTANCE	% By Weight
A. Neo-PCL self-emulsifying W/O 2/066255	23.0
Miglyol 812	7.2
Nipasteril 30 K	0.3
Extrapone VC Special 2/032431	1.0
B. Water	62.5
Magnesium sulfate	0.5
Karion F	5.0
Neo-Extrapone Chamomile 2/060350	0.2
C. Perfume oil	0.3

Suggestions on preparation:

During manufacture the phases should be emulsified with a stirrer at about 400 to 500 rpm. Stirring speed must be maintained throughout the process. The cream must be homogenized.

Suggested Formulation No. VKC 424/54

HAND CREAM

SUBSTANCE	% By Weight
A. Tegin M	8.0
PCL-solid 2/066210	5.0
Isopropyl myristate 2/044111	5.5
Beeswax DAB 7	2.0
Nipasteril 30 K	0.3
Cetyl alcohol	1.0
Calendula oil 2/383530	0.5
Silicone oil AK 100	0.5
B. Dragophos 2/918500	2.0
Water	69.8
Propylene glycol	3.0
Glycerin	2.0
C. Perfume oil	0.4

Suggested method of preparation:

Heat phases A and B separately to about 80C and emulsify phase B into phase A with a stirrer. For optimal emulsification the emulsifier Dragophos 2/918500 should be suspended in the water phase.

Suggested Formulation No. VKH 488/50

SOURCE: Dragoco, Inc.: Formulas

CLEANSING CREAM

RAW MATERIALS	% By Weight
Phase I:	
Myvaplex 600P concentrated glyceryl monostearate	6.00
Emersol 132 USP/NF Lily stearic acid	4.00
Petroleum jelly, USP	10.00
Drakeoil #9	10.00
Isopropyl myristate	10.00
SF18 (350 cP) silicone fluid	2.00
Phase II:	
Demineralized water	49.60
Propylene glycol USP	5.50
Triethanolamine 98%	0.70
Germaben II E preservative	1.50
Methyl paraben USP	0.20
Phase III:	
EASTMAN Vitamin E 6-81	0.30
Phase IV:	
Perfume	0.20

Procedure:

1. Heat Phase I and Phase II separately to 80C with propeller mixing until all chemicals are dissolved and uniform.
2. At 80C while propeller mixing, add Phase II to Phase I, w/o.
3. Continue mixing while cooling slowly to 50C. Adjust mixing to 50C due to viscosity change (thickening occurs).
4. At 50C add Phase III while mixing. Once uniform, add Phase IV with mixing.
5. Continue to adjust mixing as needed. Force cool, if needed, until emulsion reaches 32C. The product will look somewhat unstable at this stage. Inversion will occur at 32C and the cream will become very smooth and white. Continue to force cool to room temperature.

Typical Properties:

pH: 7.71

Oven Stability: Four months at 45C--No separation

Freezer Stability: No separation after three thaws

Room Temperature Stability: Six months at 25 to 27C--No separation

Cycle Stability: No separation

Centrifugation: 7 hours at 3000 rpm--No separation

SOURCE: Eastman Chemical Products, Inc.: Formulation

Water	28.6
BioCare Polymer HA-24	3.8
Germaben IIE	1.0

Description:

Glossy, w/o cleansing cream with the properties of a night cream. BioCare Polymer HA-24 is designed to deliver Hyaluronic Acid as a substantive molecular complex to the skin. Enhanced softening and lubricating properties without greasiness or tackiness. This formulation is very effective on dry areas, such as heels and elbows. Water-retaining function holds moisture yet allows skin to breathe. OHLAN contributes to the stability of the w/o cream. AMERLATE P is an excellent emollient.

PROTEODERMIN Formula

DAY CREAM

INGREDIENTS	% By Weight
A Arlatone 983 S	1,200
Brij 76	1,200
Cutina MD	4,000
Neo Heliopan, Type E 1000 656083	2,500
Neo Heliopan, Type BB 116210	0,700
Isopropyl myristate	2,000
Baysilone Fluid M 10	0,800
Finsolv TN	6,000
Solbrol P	0,050
B Demineralized Water	48,400
Solbrol M	0,150
Glycerin 86%	4,000
Germall 115	0,200
C Demineralized Water	25,000
Carbopol 954	0,400
Sodium hydroxide (10% aq. solution)	1,200
Perfume Oil	0,200
Creragen Camomile forte 728 790	2,000

Manufacturing Process:

Part A: Heat up to 75C.

Part B: Heat up to 85C.

Add part B to part A slowly while stirring. Cool while stirring to 55C.

Part C: Disperse the Carbopol in the water using high speed agitation. Mix to form a uniform dispersion free from lumps. Add sodium hydroxide solution while stirring to form a high viscid gel. Add part C to part A/B while stirring. At 35C add the fragrance, the creragen and cool down while stirring to room temperature.

The pH value of the finished cream should be at 6.5-7.0.

Remark: Without any colour dye:

the yellow-brownish colouring of the cream depends on the native colouring of the plant extract.

Instruction:

In EEC countries the use of more than 0.5% Benzophenone-3 in sunscreen products is liable to declare: contains Oxybenzone.

URBAN PROTECTION DAY CREAM

INGREDIENT	% By Weight
Demineralized Water	65.000
Carbopol 1342, 2%	15.000
Glycerine	2.000
Brookswax D	1.000
Finsolv TN	2.000
DC 200 Fluid, 350 cs	0.500
Germaben II-E	1.000
Biomin Se/P/C	0.300
Dermasome SOD	10.000
Dermasome E	3.000
AMP	0.200

Procedure:

1. Disperse the Carbopol in Water while heating to 75C.
2. Add the Glycerin and mix well.
3. Blend the Finsolv TN, Brookswax D, and Silicone Fluid at 70C until uniform and add to Water Phase. Mix until uniform.
4. Add the AMP and mix until uniform with fast propellor agitation.
5. Cool to 50C and add the Biomin Se/P/C and Germaben with sweep agitation.
6. Cool to 35C and add the Dermasomes.
7. Fragrance as desired and mix well.
8. Adjust pH to 5.0 with Citric Acid if required.

This light textured day cream contains an effective level of natural antioxidants to provide protection from urban environmental influences. The antioxidants are in the form of Liposomes as Dermasome SOD and Dermasome E to provide enhanced penetration and efficacy and the Protein-bound Biomin Se/P/C.

DEPILATORY CREAM

COMPOSITION	% By Weight
Phase A:	
Lanette O	10.0
Emulgin B 1	2.0
Cetiol V	3.0
Phase B:	
Urea	4.0
Water	ad 100.0
Phase C:	
Calcium thioglycolate	7.5
Calcium hydroxide	1.5
Phase D:	
Pearl pigment (silver or interference types)	+5.0

Manufacturing process:

The ingredients of phase A and B are separately heated to 75C. Under stirring phase B is added to phase A. The mixture is homogenized. At appr. 40C. the ingredients of C are added under stirring and if necessary the mixture is homogenized once more. Finally the pearl pigment is added and stirring is continued until a homogeneous cream is obtained.

PEELING CREAM WITH PEARL PIGMENTS

RAW MATERIALS	% By Weight
Lanette N	8.0
Eutanol G	5.0
Cetyl alcohol	2.0
Sorbitol	5.0
Preservatives	0.2
Allatoin	0.1
Texapon N 25	5.0
Polymist B6	1.0
Timiron MP-115	5.0

Manufacturing Process:

Oily phase and water phase are heated separately to 70-74C. Then water phase will be stirred into the oil phase, slowly cooled and homogenized at about 60C. Finally, fragrance, pearl pigment and polyethylene powder are to be stirred into carefully at 40C.

DRY SKIN CREAM

FORMULA	% By Weight
Phase A:	
QUATRISOFT POLYMER LM-200	0.2
Water	36.1
Phase B:	
Carbomer 940	0.2
Water	39.8
Triethanolamine (99%)	0.2
Phase C:	
Propylene Glycol	3.0
GLUCAMATE SSE-20	3.5
Phase D:	
AMERCHOL L-101	8.0
MODULAN	1.0
Glyceryl Monostearate, Neutral	2.0
GLUCATE SS	1.5
Mineral Oil	4.5
Perfume and Preservative	q.s.

Procedure:

Disperse QUATRISOFT POLYMER LM-200 in water at room temperature with good agitation. When thoroughly dispersed, heat to 75C until uniform. Mix phase B separately until uniform at room temperature. Add phase A to phase B, minus triethanolamine with mixing. When thoroughly mixed, add the triethanolamine with mixing until gel-like. Heat AB and phase C to 75C. Add phase C to AB. Heat phase D to 75C and add to ABC. Cool to room temperature with mixing.

Description:

Soft, white, glossy cream for use on dry skin. QUATRISOFT POLYMER LM-200 (cationic cellulosic polymer) is substantive to the skin, imparting a smooth, silky afterfeel. The nonionic emulsifying pair of GLUCATE SS (w/o) and GLUCAMATE SSE-20 (o/w) produces a stable emulsion over a wide temperature range. AMERCHOL L-101 acts as a w/o stabilizer in this o/w cream, and along with MODULAN, also provides emolliency.

DRY SKIN CREAM(O/W)

FORMULA	% By Weight
Oil Phase:	
PROMULGEN D	0.7
GLUCAM P-20 DISTEARATE	2.0
GLUCATE DO	0.5
ACETULAN	2.0
Cetyl Alcohol (CETAL)	1.0
Stearic Acid, xxx	4.0
Mineral Oil, 70 vis.	5.0
Cetyl Palmitate	1.0
Water Phase:	
Carbomer 934	0.3
Triethanolamine (10% aqueous)	17.0
Water	66.5
Perfume and Preservative	q.s.

Procedure:

Disperse the carbomer 934 in water with vigorous agitation. Heat the oil and water phases, minus the triethanolamine, to 85C. Add water phase to oil phase with moderate agitation. Immediately add the triethanolamine. Mix while cooling to room temperature. Add perfume at 40C.

Soft, glossy cream for dry skin. Good temperature stability and auxiliary emulsification are provided by Promulgen D and Glucate DO. Glucam P-20 Distearate functions as the moisturizer. The combination of Acetulan and Glucam P-20 Distearate impart the velvety emollient afterfeel and excellent rub-in.

EMOLLIENT CREAM

INGREDIENT	% By Weight
Demineralized Water	79.8850
Cirami No. 1	3.0000
Jojoba	2.0000
Arlacel 165	5.0000
Brookswax D	1.5000
Cetyl Alcohol	2.0000
Vitamin E Acetate	0.0150
Tri-Sept P	0.1000
Tri-Sept M	0.2000
Tensami 4/07	0.4000
Horsetail Extract AMI	3.0000
Wheat Milk Extract AMI	1.0000
Organic Silicone AMI	1.0000
Tri Col SP-1	0.5000
Tristat IU	0.2000
Perfume	0.2000

Procedure:

1. Combine oil phase materials in main tank and heat to 75C. to dissolve.
2. Heat water to 75C. and add with prop agitation to main tank.
3. Add Methylparaben, Tensami and mix until uniform. Switch to sweep agitation.
4. Begin cooling to 50C. and add Tristat IU.
5. Add Horsetail, Wheat Milk Extracts and Organic Silicone and mix until uniform.
6. Cool to RT and add the Collagen. Mix until uniform.
7. Add fragrance and mix until uniform.

EXTRA BODY CONDITIONING CREAM

INGREDIENTS	% By Weight
Water	90.05
TEGAMINE 18	1.50
Citric Acid - monohydrate	0.60
TEGIN	3.00
Ceteth-2	1.50
Cetyl Alcohol	0.50
Sodium Chloride	0.60
ABIL Wax 2440	0.35
Propylene Glycol	1.00
ABIL Quat 3272	0.50
ABIL B8851	0.40
Color, Preservatives, Fragrance	QS

Procedure:

1. Heat the water to 70-75C. Add the TEGAMINE 18. Disperse well. Add the Citric Acid. Mix well. NOTE: To facilitate mixing, some water can be held from the batch to dissolve the Citric Acid prior to adding to the batch.
2. Add the Ceteth - 2 Cetyl Alcohol, Sodium Chloride and ABIL Wax 2440. Mix.
3. Begin cooling. Cool to 45-50C while mixing. Mix the Propylene Glycol and the ABIL Quat 3272 together and add to the batch. Mix.
4. Switch to sweep mixer. Cool to 35-40C. Add the ABIL B 8851, Color, Preservatives, and Fragrance. Mix.
5. Continue cooling. Fill.

EYE CREAM

INGREDIENTS	% By Weight
Part A:	
Water	68.00
Carbopol 934	10.00
Propylene Glycol	3.00
EMULGADE 1000 NI	5.00
CETIOL LC	5.00
Mineral Oil	3.00
Part B:	
COLLAGEN CLR	5.00
Germaben II-E	1.00
Dyes	q.s.

Procedure:

Prepare 2.0% solution of Carbopol 934. Add remaining ingredients of Part A in the order listed above, under agitation while heating to 70-75C. Take heat off and continue stirring. At 30-35C, add individual ingredients of Part B. Continue stirring until product reaches room temperature. Fill off.

Comments:

This elegant eye cream utilizes a combination of emollient ester and paraffin to form a highly effective cream. EMULGADE 1000 NI provides an excellent base for skin care "treatment" products.

EYE CREAM WITH SILK

INGREDIENT	% By Weight
Tri-Tein Silk AA	2.0000
Demineralized Water	40.8000
Sorbitol 70%	5.0000
Epsom Salts	0.2500
Tri-Sept M	0.2000
Tri-Sept P	0.0500
Dehymuls K	20.0000
White Beeswax	3.5000
White Petrolatum	15.0000
Pot Marigold LS	2.0000
Arnica LS	2.0000
Squalane	4.0000
Tristat IU	0.2000
Colts Foot HS	2.0000
Horsetail HS	1.0000
Tri-Lastin 10 F	2.0000

Procedure:

Heat water to 75C. and add the Sorbitol, Epsom Salt & Parabens. Heat oil phase materials to 70C. and mix until uniform and clear. Add water phase to oil phase and mix w/prop agit. 1/2 hour or until uniform.

Cool to 50C. w/prop and switch to sweep agitation.

Continue cooling. Add the Tristat IU, Coltsfoot, Horsetail, Silk & Elastin

Mix until uniform and free of lumps.

Perform necessary QC and pack in aseptic manner.

Note: No fragrance has been included in the formula as this is an eye area cosmetic. If one is to be included, use an irritation/allergy tested type such as the Allerderm line of fragrances from Shaw Mudge.

PLACENTA SKIN TREATMENT CREAM

INGREDIENTS	% By Weight
Part A:	
LANETTE N	7.00
EUTANOL G	5.00
CETIOL S	2.00
Part B:	
Water	78.00
Glycerine	3.00
Part C:	
PLACENTALIQUID Water-Soluble	4.00
Germaben II-E	1.00

Procedure:

Heat Part A to 60C. Heat Part B to 60C. Add Part B to Part A under agitation. Continue stirring while cooling. At 35C, add individual components of Part C. Continue stirring until product reaches room temperature.

Comments:

Lanette N produces a creamy white emulsion. PLACENTALIQUID water-soluble is recommended for revitalizing and regenerating aging skin.

SOURCE: Henkel: Cream Bases: Formula H-4888

FACIAL CLEANSING CREAM

INGREDIENTS	% By Weight
Part A:	
LANETTE SX	10.00
EUTANOL G	10.00
Mineral Oil	15.00
White Petrolatum	2.00
Part B:	
Water	62.00
Part C:	
Germaben II-E	1.00
Fragrance & Dyes	q.s.

Procedure:

Mix and heat Part A to 70C. Heat Part B to 70C and add to Part A under agitation. Continue mixing until product reaches 40C. At this temperature, add individual ingredients of Part C. Continue mixing until product reaches room temperature. Fill off.

Comments:

This cream spreads easily and is an efficient cleanser. This branched chain alcohol leaves the skin feeling non-greasy and non-tacky.

MINERAL OIL CREAM-W/O

RAW MATERIALS	% By Weight
1. A-C 617	3.0
2. A-C 540	1.0
3. Beeswax	2.0
4. Mineral Oil, 70 vis.	25.0
5. Isopropyl Stearate	3.0
6. 2-Ethyl Hexyl Stearate	9.4
7. Triglycerol Diisostearate	3.5
8. Propyl-P-Hydroxybenzoate	0.2
9. Sorbitol (70%)	7.0
10. Sodium Borate, Anhydrous	0.3
11. Methyl-P-Hydroxybenzoate	0.3
12. Magnesium Sulfate	0.3
13. Water	45.0

Procedure:

Weigh 1-8 and heat to 85C with slow agitation. The blend has a cloud point of approximately 80C. Above the cloud point all waxes will eventually dissolve in the blend. If a higher solvating temperature is used, solvation can be much faster. Hold the wax blend at 85C. Heat 9-13 to 85-90C and stir gently until all has dissolved. Hold at 85C.

Place wax blend in mixing container, add aqueous phase to it and shear with homomixer or colloid mill. At 77C the crude dispersion inverts and a thick creamy emulsion forms. Continue shearing while scraping the sides of the container to make sure the whole content is properly sheared. Add perfume, de-aerate and package.

2. A-C 540	1.0
3. Mineral Oil 70 s.s.	5.0
4. Dow Fluid 556	1.0
5. Propylene Glycol Dipelargonate	10.5
6. Hydroxyol	2.0
7. Ethoxyol 24	1.0
8. Arlacel 60	1.3
9. Tween 60	1.8
10. Propyl-P-Hydroxybenzoate	0.1
11. Sorbitol (70%)	5.0
12. Carbopol 940	0.75
13. Germall 115	0.4
14. Methyl-P-Hydroxybenzoate	0.2
15. Triethanolamine	0.75
16. Water	68.3

Procedure:

Disperse Carbopol in water. Weigh 1-10 and heat to 80-90C with slow agitation. Add remaining ingredients, except Triethanolamine, to the Carbopol/water dispersion and heat to 80-90C. Add the wax phase to the aqueous phase and shear in homomixer. Continue to shear while cooling to 40C, then add Triethanolamine, mixing well. Cool to 30C, add perfume, de-aerate and package.

GENERAL PURPOSE W/O CREAM

RAW MATERIALS	% By Weight
1. A-C 617	3.0
2. Beeswax	2.0
3. Amerchol L-101	5.0
4. Mineral Oil, 70 vis.	8.2
5. Dow Fluid 200, 350 cs.	1.0
6. 2-Ethyl Hexyl Stearate	10.0
7. Triglycerol Diisostearate	5.5
8. Propyl-P-Hydroxybenzoate	0.1
9. Sorbitol (70%)	5.0
10. Sodium Borate, Anhydrous	0.3
11. Methyl-P-Hydroxybenzoate	0.2
12. Germall 115	0.3
13. Water	59.4

Procedure:

Weigh 1-8 and heat to 85C with slow agitation. The blend has a cloud point of approximately 80C. Above the cloud point all waxes will eventually dissolve in the blend. If a higher solvating temperature is used, solvation can be much faster. Hold the wax blend at 85C. Heat 9-13 to 85-90C and stir gently until all has dissolved. Hold at 85C.

Place wax blend in mixing container, add aqueous phase to it and shear with homomixer or colloid mill. At 67C the crude dispersion inverts and a thick creamy emulsion forms. Continue shearing while scraping the sides of the container to make sure the whole content is properly sheared. Add perfume, de-aerate and package.

Procedure:

1. Heat Sequence 1 materials to 80C under Lightnin' mixing in side kettle.
2. Heat Sequence 2 materials to 78C in main kettle (equipped with variable speed Lightnin' mixing and planetary side wiping mixing) under Lightnin' mixing. Be sure Carbopol solution is thoroughly dispersed.
3. At 78C add Sequence 3 materials and disperse thoroughly. Add premixed Sequence 4 and thoroughly disperse (approx. 10 min.)
4. Add Sequence 1 to combined Sequence 2, 3 and 4 at 78C under Lightnin' mixing. Maintain temperature at 75C for 15 minutes or emulsification is complete.
5. Remove Lightnin' mixer, insert planetary side wiping mixer and slowly cool to 45C. Add Sequence 5. Disperse thoroughly and cool to 25C.

MOISTURE REPLENISHING CREME

RAW MATERIALS % By Weight

Part I:

Water	81.6
MONAQUAT P-TS	3.0

Part II:

Cetyl Alcohol (95%)	5.0
Myristyl Myristate	5.0
Isopropyl Myristate	4.0
Lanolin Alcohol	0.4
Dimethicone (350 C.S.)	1.0

Procedure:

Heat Part I to 65C. Mix until uniform. Heat Part II to 65C. Mix until uniform. Add Part II to Part I with stirring. Cool slowly to 40C and add fragrance, coloring, or preservative as required. Cool with stirring to 35C, fill.

This formulation is recommended as a moisturizing replenishing creme. Its skin penetrating performance coupled with its high moisturizing effect and low pH (6) are ideally suited for everyday skin care.

THERAPEUTIC HUMECTANT CREME

RAW MATERIALS % By Weight

Part I:

Deionized Water	66.8
MONAQUAT P-TS	3.0
Glycerin (99%)	15.0

Part II:

Cetyl Alcohol (95%)	5.0
Myristyl Myristate	5.0
C12-C15 Alcohols Benzoate	3.0
Propylene Glycol Monostearate (Pure)	2.2

Procedure:

Heat Part I to 65C, with mixing, until clear. Heat Part II to 65C, with mixing. Slowly add Part II to Part I with efficient mixing. Remove heat after 5 minutes. Cool slowly. Product will start to thicken at about 50C. If propeller slows down, increase speed to ensure efficient mixing. Add fragrance, coloring or preservative as required. Cool to 40C, fill.

This high-powered moisturizer is designed to help heal chapped or cracked skin rapidly. It contains a high concentration of glycerin and it is easily prepared at the skin compatible pH of 6. Monaquat P-TS helps create the smoothing properties which are readily perceived when this creme is applied and also eliminates the tackiness normally associated with high levels of glycerin.

MOISTURIZING CREAM

INGREDIENT	% By Weight
Part A:	
GENEROL 122	1.00
CUTINA GMS	1.75
EUTANOL G-16	7.00
MYRITOL 318	4.00
LANETTE 18	1.00
White Protopet	6.00
Stearic Acid	4.00
D.C. Silicon Fluid 200 (350 CS)	0.50
Propylparaben	0.10
Butylparaben	0.05
Part B:	
Propylene Glycol	4.00
Triethanolamine	1.80
Methylparaben	0.25
Deionized Water	q.s. to 100
Part C:	
SEDAPLANT RICHTER	3.00
Fragrance	0.10

Procedure:

- 1) Melt Part A, stir until uniform, while heating to 75-80C.
- 2) Mix and stir Part B to 75-80C.
- 3) Add Part A to Part B at 75-80C, using moderate agitation.
- 4) Stir down to 40-45C and add Part C.
- 5) Cool with stirring to 25-30C and package.

Comments:

This moisturizing cream contains Sedaplant Richter, a combination of herb extracts which are soothing to the skin. In addition, the presence of Urea and a Urea derivative in the Sedaplant provide an anti-inflammatory property to this cream.

MOISTURIZING CREAM

RAW MATERIALS	% By Weight
A. Schercemol DID	6.00
Schercemol 318	3.00
Mineral Oil	5.00
Stearic Acid	6.00
Schercemol PGMS	8.00
Cetyl Alcohol	1.00
Propyl Paraben	0.20
B. Water, Deionized	64.35
Methyl Paraben	0.20
Triethanolamine	1.00
Propylene Glycol	5.00
C. Fragrance	0.25

Procedure:

1. Heat Part A to 70-75C.
2. Heat Part B to 70-75C.
3. With slow agitation, add Part B to Part A.
4. Allow batch to cool to 40C with constant agitation.
5. Add fragrance.

MOISTURIZING CREAM

RAW MATERIALS	% By Weight
A. Schercemol PGMS	2.00
Schercemol TIST	2.00
Cetyl Alcohol	3.00
Arlacel 165	2.50
Schercemol DID	8.00
B. Water, Deionized	75.75
Carbopol 934	0.50
C. Propylene Glycol	0.70
Methyl Paraben	0.20
Propyl Paraben	0.10
D. Water, Deionized	4.50
Potassium Hydroxide	0.50
E. Fragrance	0.25

Procedure:

1. Prepare Part A by beating the ingredients to 75C to dissolve the solids.
2. Part B. Prepare Carbopol solution by dispersing Carbopol into water using high speed agitation until a smooth slurry is obtained. Then heat the dispersion to about 80C until a smooth, viscous solution is formed.
3. Combine Part C at 55C and add to Part B.
4. Add Part B & C to Part A with continual mixing. Allow the batch to cool.
5. At 55C, add Part D. Then add fragrance at room temperature.

PIGMENTED COVER CREME

RAW MATERIALS	% By Weight
Oil Phase:	
CRODAMOL PMP	3.00
CRILL 6	2.00
COSMOWAX J	3.50
SUPER REFINED Babassu Oil	3.00
CRODAMOL PTIS	1.00
SUPER HARTOLAN	1.50
SYNCROWAX BB4	2.00
PROVOL 50	1.00
Silicone Fluid SF96-50	.50
Water Phase:	
CRODALAN AWS	2.00
Veegum HV	0.75
Ganex V216	3.00
Methyl Paraben	.20
Propyl Paraben	.10
Germall 115	.30
Water deionized	62.45
Protein Phase:	
COLLASOL	.50
CROMOIST HYA	.50
Pigment Phase:	
Talc	5.00
Titanium Dioxide	4.00
Lo Micron Pink Extender	1.20
Lo Micron Brown	2.50

Procedure:

Charge a vessel with water and disperse the Veegum. Continue mixing until smooth. Heat to 75C while adding in the rest of the water phase. Combine and heat oil phase to 75C. Blend the pigment phase together until no pigment streaks appear on drawdown. Add the pigments to the water until well blended. Then add the water to the oil phase under good agitation. At 40C add in the protein phase. Continue mixing to room temperature. pH 6.7. (Pigment level can be adjusted for desired coverage).

MU-53 is a light nonionic cover cream designed to even out skin tone. A combination of SUPER REFINED Babassu Oil, CRODAMOL PMP and CRODAMOL PTIS moisturizes without a greasy afterfeel, and allows the skin to breathe. PROVOL 50 is an excellent pigment dispersant. COLLASOL and CROMOIST HYA put a moisture film on the skin to help maintain a smooth surface.

SF-1202 Silicone Fluid	1.0
Propylparaben	0.1
Part B:	
Deionized Water	76.2
Propylene Glycol	5.0
Sodium Hydroxide	0.5
Methylparaben	0.2

Procedure:

- 1) Blend Part A and heat to 70-75C.
- 2) Blend Part B and heat to 70-75C.
- 3) Add Part B to Part A and agitate.
4. Cool to 30C and package.

Comments:

This protective hand cream is a light cream which provides a high degree of emolliency and imparts a greaseless moisture barrier.

SOURCE: Henkel: High Purity Lanolins: Formula H-4988

HAND CREAM

RAW MATERIALS	% By Weight
A Hostacerin CG	15,00
Mineral oil	15,00
Belsil DM 350	1,00
B Glycerine	3,00
Water	66,00
Preservatives, perfume	q.s.

Melt A at approx. 70C, heat B to 75C. Add B to A whilst stirring (do not allow a foam to form). Stir cold slowly.

Temperature stability: at 45C over 10 weeks.

White, creamy. Easily spread, quickly absorbed.

SOURCE: Wacker Silicone: Formulation 148 AH

PROTECTIVE HAND CREAM

FORMULA	% By Weight
Oil Phase:	
AMERCHOL CAB	5.0
AMERLATE LFA	3.5
PROMULGEN D	2.0
Glyceryl Stearate	5.0
Dimethicone	20.0
Water Phase:	
Water	64.0
Triethanolamine	0.5
Perfume and Preservative	q.s.

Procedure:

Heat both phases to 75C. Add water phase to oil phase at 75C and mix while cooling. Pour at 35C.

Description:

Protective hand cream containing AMERCHOL CAB, a multisterol extract of lanolin alcohols in petrolatum. AMERCHOL CAB is effective in moisturizing dry skin and works very well in conjunction with the dimethicone in protecting the skin from environmental insult. AMERCHOL CAB and PROMULGEN D help stabilize the emulsion formed by the triethanolamine lanolate soap system.

SOURCE: Amerchol Corp.: AMERCHOL Series: Formula T50-40-1

DAILY SKIN CARE CREAM

RAW MATERIALS	% By Weight
Oil Phase:	
GLUCAM E-20 Distearate	2.5
GLUCATE DO	2.0
GLUCATE SS	2.5
Isopropyl Palmitate (PROPAL)	3.0
Water Phase:	
Deionized Water	77.0
Carbomer 934 (3% aqueous sol'n)	10.0
Triethanolamine (10% aqueous sol'n)	3.0
Prefume and Preservative	q.s.

Description:

Mineral oil-free, soft, white, glossy cream for daily use. Glucam E-20 Distearate provides a smooth, silky afterfeel while also contributing o/w emulsification. Glucate DO and Glucate SS combine to serve as w/o emulsifiers giving excellent temperature stability.

SOURCE: Amerchol Corp.: GLUCAM E-20 Distearate: Formula T51-93-1

PROTECTIVE SKIN CREAM

SKIN CARE CREAM

INGREDIENTS	% By Weight
Part A:	
EMULGADE 1000NI	7.00
MYRITOL 318	5.00
CETIOL LC	5.00
Part B:	
Water	79.70
COSMEDIA POLYMER HSP-1180	3.00
Part C:	
Triethanolamine (99%)	0.30
Part D:	
Dyes, preservatives & fragrance	q.s.

Procedure:

Heat Part A to 70-75C. Heat Part B to 70-75C. Add Part B to Part A under agitation. Add Part C. Continue stirring until product reaches 40-45C. At this temperature add individual components of Part D. Continue stirring until product reaches room temperature. Fill off.

This is a good example of the "extra" good feeling the COSMEDIA POLYMER HSP-1180 provides on the skin.

Suggested Formula H-4815

SKIN CONDITIONING CREAM

FORMULA	% By Weight
Water Phase:	
KYTAMER PC	0.5
GLUCAM E-10	5.0
GLUCAMATE SSE-20	1.0
Deionized Water	65.5
Oil Phase:	
PROMULGEN G	5.0
AMERCHOL L-101	4.0
AMERLATE P	3.0
GLUCATE SS	1.0
Mineral Oil	15.0
Perfume and Preservative	q.s.
Procedure:	

Disperse KYTAMER PC in water with high speed agitation. When completely dispersed heat to 75C with continuous mixing until clear and uniform. Add GLUTAMATE SSE-20 while maintaining temperature of water phase at 75C. Heat oil phase to 75C. Add water phase at 75C to oil phase at 75C with good agitation. Continue mixing while slowly cooling to room temperature. Add perfume below 50C.

Description:

White, glossy, heavy viscosity cream. Humectancy and smooth, silky, afterfeel attributed to KYTAMER PC and GLUCAM E-10. AMERLATE P helps rub-in of cream onto skin by providing lubricity properties. Primary emulsification of system due to highly efficient, mild, nonionic emulsifier pair of GLUCAMATE SSE-20 (o/w) and GLUCATE SS (w/o). Auxiliary emulsification achieved with use of PROMULGEN G and AMERCHOL L-101.

SOURCE: Amerchol Corp.: KYTAMER PC: Formula T60-28-1

FACIAL CLEANSING CREAM

INGREDIENTS	% By Weight
Part A:	
LANETTE SX	10.0
EUTANOL G	12.0
Mineral Oil, NF	15.0
Part B:	
Water	62.0
Part C:	
Germaben II	1.0
Fragrance	q.s.
Procedure:	

Mix and heat Part A to 70C. Heat Part B to 70C and add to Part A. Mix until cooled to 40C and add Part C.

Comments:

This cream spreads easily and is an efficient cleanser. The branched chain alcohol leaves the skin feeling non-greasy and non-tacky.

SOURCE: Henkel: Formula H-4876

SKIN CREAM

FORMULA	% By Weight
Oil Phase:	
AMERSIL ME-358	10.0
Cyclomethicone Pentamer	3.0
AMERCHOL CAB	3.5
AMERLATE P	1.0
Water Phase:	
Glycerin	5.0
Carbomer 934	0.3
NaCl	0.8
Deionized water	76.1
Triethanolamine (99%)	0.3
Preservative and perfume	q.s.

Description:

In this glossy, white cream, AMERSIL ME-358 provides a rich, elegant, nongreasy feel while also contributing to the emulsification of the cyclomethicone pentamer. AMERCHOL CAB and AMERLATE P provide additional emollience, especially for very dry skin. In addition, AMERCHOL CAB serves as an auxiliary emulsifier, contributing to overall product stability.

SOURCE: Amerchol Corp.: AMERSIL ME-358: Formula T59-196-1

NONIONIC O/W SKIN CREAM

FORMULA	% By Weight
Oil Phase:	
AMERSIL DMC-287	2.0

WASH CREAM

RAW MATERIALS	% By Weight
A Teginacid	10,00
Adol 66	5,00
Isopropyl Myristate	6,00
Eutanol G	4,00
Texapon N 40	5,00
Mineral Oil, High Viscosity	5,00
B Belsil DMC 6031	1,00
Propylene Glycol	11,00
Water	53,00
Preservatives, fragrances, pigments	q.s.

Heat A and B each to 65C. Mix B well into A.

Temperature stability: at 45C 8 weeks.

White thick lotion. Pleasant, soft feeling on the skin.

Formulation 362 AH

WASHING CREAM

RAW MATERIALS	% By Weight
A Lamecreme KSM	10,00
Lanette O	5,00
Isopropyl Myristate	6,00
Belsil DM 350	2,00
Eutanol G	4,00
Texapon N 40	5,00
Mineral oil, low viscosity	5,00
B Propylene Glycol	12,00
Water	46,50
Belsil DMC 6032	4,50
Preservatives, fragrances, pigments	q.s.

Heat A and B each to 65C, mix B into A, stir cold.

Temperature stability: at 45C over 10 weeks.

White firm cream. Good cleansing effect and soft feeling on the skin.

Formulation 397 AH

SOURCE: Wacker Silicone: Standard Formulations

W/O CLEANSING CREAM

RAW MATERIALS	% By Weight
A ABIL B 8839	4.0
ABIL 350	1.0
Synthetic Beeswax	2.0
Ozokerite	2.0
Glyceryl Oleate (and) Propylene Glycol	2.0
Light Mineral Oil	15.0
B Water	55.8
Glycerine	18.0
Methylparaben	0.2
Perfume	QS

Procedure:

Mix together the ingredients for Phase A and Phase B in separate containers. Heat each phase to approximately 70C, and be certain all the solids have melted and dispersed in the oil phase. Slowly add B to A while mixing on a high-shear mixer. Continue mixing for 5-10 min. Cool, with occasional stirring, to approximately 40C and mix in the perfume.

Comments:

This formulation is designed to remove makeup as well as to soften and moisturize the skin. For a less oily formulation, the proportions of Mineral Oil and Cyclomethicone can be reversed. If Paraffin is substituted for Ozokerite, a much stiffer cream will result.

W/O COLD MIX CREAM

INGREDIENTS	% By Weight
A. ABIL WE-09	5.0
Isopropyl Stearate	5.0
Decyl Oleate	5.0
ABIL Wax 2434	3.0
Aerosil R 812	0.5
B. Water	80.0
Tylose H2O	0.8
Sodium Chloride	0.5
C. Fragrance	0.2

Procedure:

1. Blend the liquids of phase A at ambient temperature. Disperse the Aerosil into the vortex. Mix until dispersed.
2. In a separate vessel, add the Tylose to the water. When dispersed, add the sodium chloride.
3. Stream phase B into phase A using a speed mixer with sweep agitation.
4. When the emulsion is complete, add the fragrance using slow sweep agitation.
5. Dispense.

W/O EMULSION EMOLLIENT CREAM

RAW MATERIALS	% By Weight
Oil Phase:	
ABIL WE-09	5.0
Castorwax	0.5
FT-200 Wax	0.5
Mineral Oil (70 SUS)	8.0
ABIL Wax 9801	2.0
Isopropyl Myristate	4.0
Water Phase:	
Water	79.2
NaCl	0.8
Preservatives, Color, Fragrance	Q.S.

Procedure:

1. Add the components of the oil phase together. Heat to melt and disperse the waxes. When dispersed, maintain temperature of 50-60C.
2. Mix the water and sodium chloride. Heat to 50-60C.
3. With lightning mixing, stream the water phase into the oil phase.
4. With sweep agitation, cool to 35C.
5. Add color, fragrance and preservatives.
6. Homogenize with a rotor-stator homogenizer.

Hair Care Products

ACID PERMANENT WAVE

INGREDIENTS	% By Weight
Part A:	
Glyceryl Thioglycolate	80.00
Part B:	
Hamp-ex 80	0.25
Emulsifier K-700	2.00
Brij-35	0.60
Fragrance	0.20
Aqueous Ammonia, 28%	*
Water	q.s.

* The pH of Part B should be adjusted so that the mixture of Part A with Part B has a final pH in the range of 6.8-7.2

Since glycerol monothioglycolate is not hydrolytically stable, it must be packed separately. Part A and Part B are mixed just prior to application. The ratio of Part A to Part B is as follows:

Part A:	20-25 grams
Part B:	60-80 ml
Resultant pH:	6.8-7.2

To increase the strength of the formula, use a larger amount of Part A and/or a smaller amount of Part B.

ACID-WAVE-SOLUTION

RAW MATERIALS	% By Weight
A Glycerolmonothioglycollate (75%)	24,75
Glycerine	7,25
B Urea	4,10
Potassium sorbate	0,35
Olamin K	1,35
Antara 430	0,20
Ammonium carbonate	0,20
Triethanolamine	0,80
Water, demineralized	61,00

Procedure:

Blend phase A (waving-solution) and phase B (pH-balancing-solution) separately. Mix phases A and B shortly before application.

Formula 34-1/90

COLD-WAVE-EMULSION
(7% Thioglycollic Acid)

RAW MATERIALS	% By Weight
A Thioglycollic acid (99%)	7,00
Ammonia solution (25%)	7,80
Water, demineralized	55,20
B Emulgade 1000 Ni	5,00
Turpinal SL	0,20
Water, demineralized	24,80

Procedure:

Dilute Thioglycollic acid with the water of phase A. Add alkalizing agent while cooling (the temperature of the solution should not exceed 30C) and stirring. Adjust pH to 8,8. Heat phase B to 70C, stir to cool. At 25C add phase A to phase B while stirring, homogenize. Add perfume as required.

pH 22C = 8,8

ANIONIC CREME RINSE

RAW MATERIALS	% By Weight
Part A:	
Cetyl Alcohol	3.00
Lanolin	0.50
Glycerin	1.00
Petrolatum	0.50
MACKESTER IDO	0.50
Sorbitan Palmitate	0.15
Polysorbate 80	0.15
Part B:	
Sodium Sulfate	0.50
Sodium Lauryl Ether Sulfate	1.00
Animal Hydrolyzed Protein 55%	1.00
MACKAMIDE AME-75	
Hydroxy Ethyl Cellulose Solution--0.25% in water	qs
Butyl Cellosolve	1.00
MACKANATE DC-30	1.50
Part C:	
MACKSTAT DM	qs
Fragrance & Color	qs

Procedure:

1. Melt Part A in a separate container to 75 degrees C.
2. Into the mixing tank, add the water and add the Part B ingredients, while starting the heating and mixing. Heat the contents to 75 degrees C.
3. Then start adding the contents of container Part A slowly to the solution of Part B and using strong agitation, keep mixing for 10-20 minutes at 75 degrees C, then start cooling with agitation to 45 degrees C. Slow down agitation and add ingredients of Part C, mix very slowly, and cool to room temperature.
4. The product will develop the viscosity of standing overnight without agitation.

pH: 4.8-5.4

Viscosity overnight: 2500-3200

CLEAR CLEAN CONDITIONER

RAW MATERIALS	% By Weight
MACKALENE 426	6.0
MACKPRO KLP	0.5
Natrosol 250 HHR	1.2
MACKSTAT DM	q.s.
Water, Fragrance q.s. to	100.0

Procedure:

1. Completely disperse Natrosol in cold water.
2. Heat to 40 degrees C. and add remaining components.
3. Blend until clear.
4. Cool and fill.

SPRAY-ON CONDITIONER FOR EXTRA CURLY HAIR

RAW MATERIALS	% By Weight
MACKINE 301	1.00
MACKESTER EGMS	1.50
Cetearyl Alcohol	1.50
C12-16 Alcohols (Alfol 1216)	1.50
Lactic Acid Natural	QS to pH approx 0.40
Fragrance, Color	Q.S.
MACKSTAT DM	Q.S.
MACKERNIUM 007 <u>Optional</u>	0.50
Deionized Water	Q.S. to 100.0

pH: 3.6-4.00

Procedure:

Into the manufacturing stainless steel tank meter water, #9 and start heating.

Add #2, #3, #4 and heat to 160F (71C) add #1, and start mixing well to dissolve all ingredients completely.

Once the emulsion forms add #5 at about 140F (60C) and mix strongly and take a sample. Cool it and check pH and add #5 in small amounts till proper pH level is obtained.

Then add Item #6, #7 and if desired #8, dissolved in a small amount of #9. Mix to room temperature.

A sprayable lotion will form upon overnight standing.

CLEAR CONDITIONING RINSE

RAW MATERIALS	% By Weight
Part A:	
Deionized Water	90.5
Germaben II	1.0
Methocel F4M	1.5
Part B:	
CRODAFOS SG	1.0
INCROMECTANT LAMEA	3.0
INCROQUAT BA-85	1.0
Part C:	
CROSILKQUAT	2.0

Procedure:

Add Germaben II to 1/3 of the water and heat to 85C. Disperse Methocel F4M in the hot water. Add the remaining cold water. Mix until hydrated. Add ingredients from Part B, mixing each addition until clear. Cool batch to 40C and add Crosilkquat. Mix until clear.

This conditioning rinse takes advantage of CROSILKQUAT's moisturizing and substantivity for hair. Due to its small size, it can penetrate the hair cuticle far more effectively than high molecular weight proteins.

CLEAR CONDITIONING RINSE

RAW MATERIALS	% By Weight
KYTAMER PC	1.00
Olealkonium Chloride (55% Aqueous)	3.64
Water	95.36
Perfume and Preservative	q.s.

Procedure:

Disperse KYTAMER PC in water with high speed agitation. When completely dispersed, heat to 75C with continued mixing until solution is clear and uniform. Add Olealkonium Chloride and mix until uniform. Dissolve preservative into batch. Cool to room temperature.

Description:

Clear, conditioning hair rinse which can be used after shampooing. KYTAMER PC is a substantive humectant which helps retain moisture in hair leaving it soft and full in appearance. KYTAMER PC's film forming properties give the hair shine.

SOURCE: Amerchol Corp.: KYTAMER PC: Formula T54-272-1

HAIR CONDITIONER

RAW MATERIALS	% By Weight
Water Phase:	
QUATRISOFT POLYMER LM-200	1.0
Water	94.0
Oil Phase:	
PROMULGEN D	4.5
Glyceryl Monostearate, Neutral	0.5
Perfume and Preservative	q.s.

Procedure:

Add QUATRISOFT POLYMER LM-200 to water at room temperature with good mixing. When thoroughly dispersed, heat to 75C. Add oil phase at 75C to water phase at 75C with mixing. Cool while mixing to room temperature.

Description:

White, glossy, medium viscosity cream rinse hair conditioner. QUATRISOFT POLYMER LM-200 uniformly adheres to each hair shaft by virtue of its cationic nature, thus imparting superb wet and dry combing, shine and conditioning properties. PROMULGEN D functions as the primary o/w emulsifier in this stable system.

CLEAR HAIR RINSE

INGREDIENTS	% By Weight
Natrosol 250HHR	1.0
Water	73.5
Ninol CA	5.1
Ninol L	10.2
Variquat E228	10.2
Perfume, preservative	q.s.

Procedure:

1. Disperse Natrosol in water. Mix until fully dissolved.
2. Add the remaining ingredients in the order listed, mixing well between additions.

Brookfield viscosity, cps: 3,360

Natrosol viscosifies this crystal-clear hair rinse, which promotes manageability. Control formulas made without a water-soluble polymer have viscosities less than 100 cps.

PEARLESCENT CREAM RINSE

INGREDIENTS	% By Weight
A. Natrosol 250HHR	1.3
Water	82.3
B. Varisoft SDC	10.1
Propylene glycol	1.5
Glycol stearate	1.5
Emulphor ON-870	1.5
Mirapol AD-1	1.8
Perfume, preservative	q.s.

Procedure:

1. Disperse Natrosol in water. Mix until fully dissolved.
2. In a separate vessel, mix the Varisoft SDC and propylene glycol. Heat to 80C.
3. Add the other ingredients listed in Section B, in the order listed, to the mixture of Varisoft and propylene glycol. Mix well between each addition.
4. Add the surfactant mixture to the water-soluble polymer solution. Mix well, Cool to 35C.
5. Add perfume and preservative.

Brookfield viscosity, cps = 8,600

Natrosol viscosifies this product and prevents phase separation.

COLD WAVE EMULSION

RAW MATERIALS	% By Weight
Luviquat Mono CP	1.50
Thioglycolic Acid 80%	12.50
Ammonia 25%	18.80
Water	67.20

Preparation:

Weigh out and mix.

Properties:

Clear solution. In combination with oxidizing solution No. 09/12, it causes a permanent wave in the hair.

Application:

Apply to curled, wet hair, rinse out. Then treat with oxidizing solution No. 09/12.

OXIDIZING SOLUTION

RAW MATERIALS	% By Weight
Luviquat Mono CP	3.00
Hydrogen Peroxide 30%	10.00
Water	87.00
Perfume	q.s.

Preparation:

Weigh out and mix.

Properties:

Clear solution. When used in combination with cold wave emulsion No. 09/011, causes permanent wave in hair.

Application:

After cold wave emulsion No. 09/011 has been rinsed off, apply and leave for 10 minutes. Wash out thoroughly. Continue treatment as normal.

COLOR SPRAYS

1. Composition of the Basic Solution:

RAW MATERIALS	% By Weight
Ethanol/isopropanol mixture	40.0
Pentane	31.6
Paraffin liquid	10.0
Pearl pigments from Rona/Merck (see below)	12.0
Luviskol VA 37	6.0
Dow Corning 200 fluid/350 cs.	0.2
Eutanol G	0.2

2. Proportion basic solution to propellant gas about 20:80. As propellant EM Pigments recommends a Propane/Butane 25/75 or such one of Dimethylether or Butane.
3. Using pigments of small or medium particle size standard valves are recommendable (about 0.5 mm). In case of sparkle pigments EM Pigments recommends the same valves as used for dry shampoo aerosols (about 0.7 mm).
4. Basically all Rona pigments are suitable. Particularly attractive lustre effects can be obtained by the following pigments:
Soloron Silver, Colorona Red Gold, - Sienna, - Bronze, - Light Blue, - Majestic Green and - Imperial Red and the Timiron Super interference types.

CONDITIONING CREME HAIRDRESS

INGREDIENTS	% By Weight
Phase A:	
Water	30.0
Cartaretin F-23	4.0
Velsan P8-3	3.0
Phase B:	
Carnation	41.4
Polyethylene 617A	4.6
Phase C:	
Petrolatum, White USP	10.0
Arlacel 186	3.0
Tween 80	1.0
Promulgen D	3.0

Procedure:

Mix Part B together and heat to 70C with stirring until clear. Place in cooling bath (10-15C) and apply agitation. Scrape off thick gel as it forms on beaker wall, cool to approximately 45C. Separately mix and heat Part C to 65C. Add Part B. When homogenous, add pre-mixed Part A and stir in completely. Package.

Properties:

Appearance: Soft glossy white cream
 pH: 7.2
 Viscosity: <20,000 cps

Applied as a hairdressing, this w/o cream conditioner provides sheen, manageability and conditioning simultaneously. Cartaretin F-23, a cationic copolymer gives conditioning and light hold. Velsan P8-3 adds to the gloss, lessens the oily heavy feel of the petroleum base, and also improves the stability of the system.

RAW MATERIALS	% By Weight
Water	94.2
MONATERIC 1202	2.8
Stearalkonium Chloride (85%)	1.0
Cetyl Alcohol	2.0

Procedure:

Mix water and MONATERIC 1202 until homogeneous. Add remaining ingredients with agitation and heat to approximately 60C. until homogeneous. Continue stirring while cooling to 25C. Adjust pH to 4.5-5.5.

Formulation Properties:

Appearance: Opaque Lotion
Nominal Activity: 4.0%

This creme rinse removes tangles for excellent wet combing and additionally provides a substantive, non-oily, non-greasy conditioning effect which leaves hair soft, shiny and vibrant,

SOURCE: Mona Industries, Inc.: MONATERIC 1202: Formula

NATURAL CONDITIONING CREME RINSE
(For Extra Conditioning and Wet Combability)

INGREDIENTS	% By Weight
Water	95.0
Glyceryl Stearate	1.5
Stearalkonium Chloride	1.0
AVAMID 150	1.5
Hydroxyethylcellulose	1.0

This Conditioning Creme Rinse imparts the detangling and wet combability that longer hair usually requires and at the same time provides the natural avocado oil "instant" conditioning to the hair.

Procedure:

Mix all ingredients. Heat to melt while mixing until uniform. (60C). Cool with stirring. Adjust pH to 5.5-6.0. Add preservative, color and perfume as required.

Formulation Properties:

Physical Appearance: Creamy lotion
Activity: 4.5%
Viscosity: Thixotropic pourable liquid

CONDITIONING AND STYLING MOUSSE

RAW MATERIALS	% By Weight
Phase A:	
PROMULGEN D	0.5
Water	77.0
AMEROXOL OE-20	0.5
GLUCAM P-10	1.0
SOLULAN 98	2.0
Phase B:	
Alcohol-SDA 40	15.0
AMERSETTE	4.0
Perfume and Preservative	q.s.

Procedure:

Combine phase A and heat to 75C until uniform. Cool to 45C and add premixed phase B. Phase B can be premixed at room temperature to avoid solvent loss. Add perfume below 40C. Cool to room temperature and fill.

Fill: 95% Concentrate; 5% Propellant A-46

A quick-breaking conditioning and styling mousse. A balance of PROMULGEN D and AMEROXOL OE-20 insures a good dispersion of propellant in the concentrate with good foam formation and stability with valve actuation while still allowing for a "quick-break" upon massaging into the hair. SOLULAN 98 and GLUCAM P-10 contribute to wet and dry comb, lustre, feel, and also reduce flyaway. GLUCAM P-10 enhances foam stability, moisture retention and foam wetting. AMERSETTE provides anti-static, conditioning and styling properties.

SOURCE: Amerchol Corp.: PROMULGEN D: Formula T51-51-6A

CONDITIONING HAIR SPRAY

RAW MATERIALS	% By Weight
GLUCQUAT 100	0.25
AMERSETTE	5.00
SD Alcohol 40	74.75
A-46 Hydrocarbon Propellant	20.00

Procedure:

Dissolve AMERSETTE and GLUCQUAT 100 in SD Alcohol 40. Fill into aerosol hair spray cans and charge with propellant.

Description:

Besides the styling properties of this product, the hair is also left conditioned by the addition of GLUCQUAT 100. The cationic functionality makes GLUCQUAT 100 substantive to hair, where it adds shine and moisturization. It also helps plasticize the fixative resin, AMERSETTE.

SOURCE: Amerchol Corp.: GLUCQUAT 100: Formula T62-69-2M

CONVENTIONAL PACKAGE HAIR GROOM

COMPONENT	% By Weight
Polymer JR-400	1.00
TERGITOL Nonionic Surfactant 15-S-12	0.05
Triethylene Glycol	0.05
Methyl p-Hydroxybenzoate	0.05
SD-40 Alcohol, anhydrous	25.00
Deionized water, perfume	73.85

Preparation:

Dissolve the TERGITOL Surfactant 15-S-12 and preservative in the water. Add the Polymer JR while stirring, and continue mixing until the resin is dissolved. Introduce the alcohol into the formula. Finally, add perfume as desired. The use of hot water (60C) will increase the rate of solution for Polymer JR.

Polymer JR makes a "different" type of hair groom, being non-oily and non-sticky. It can be applied to wet or dry hair, it provides good combing and holds the hair in place, and has the advantage of renewed grooming action simply by combing with a wet comb. It is excellent as an after shampoo-hair groom.

AEROSOL HAIR GROOM

COMPONENT	% By Weight
Polymer JR	0.4
Water	22.2
UCON Propellant 12	22.5
SDA-40	54.9

Valve Orifices = 0.062" x 0.013"

Container = Organosol-lined

Preparation:

Dissolve Polymer JR in the usual manner, and add the SDA-40. Package with UCON Propellant 12.

Since Polymer JR is insoluble in ethanol, hydroalcoholic systems have to be used to package it in aerosol form. Based on solubility studies, basic formulation around which to develop Polymer JR aerosol products.

CREME HAIR TREATMENT

RAW MATERIALS	% By Weight
1. Paraffin Wax (MP 128F.) 53C.	3.00
2. MACKADET CBC	6.00
3. MACKESTER EGMS	2.00
4. MACKAMIDE PKM	0.75
5. PEG-150 Distearate	1.00
6. MACKPRO WWP	1.00
7. MACKERNIUM 007	1.00
8. MACKSTAT DM	q.s.
9. Fragrance	q.s.
10. Deionized Water q.s. to	100.00
pH: 4.00-6.00	

Procedure:

1. Into a stainless creme kettle put in #1, #2, #3, #4, #5 and start heating to 75 degrees C. (167 degrees C.).
 2. Separately heat #10 to the same temperature, add it slowly with good mixing to the hot waxes in the creme kettle and increase mixing speed.
 3. Keep mixing for 15 minutes at the same temperature and speed.
 4. Then start cooling process slowly and reduce mixing speed.
 5. At 50 degrees C. (120 degrees F.) add #6, #7, #9 and finally #8.
 6. Take a sample, cool and check pH value and adjust batch if necessary, upward with a few drops of diluted Sodium Hydroxide solution or downward with Citric Acid solution.
 7. Cool batch slowly with very low speed mixing until product turns to cream.
- Formula AY-184-3

CBC CREME HAIR TREATMENT

RAW MATERIALS	% By Weight
1. MACKADET CBC	7.00
2. Paraffin Wax	2.00
3. MACKERNIUM 007	1.00
4. MACKSTAT DM	Q.S.
5. Fragrance	Q.S.
6. Color	Q.S.
7. Deionized Water Q.S. to	100.00

Procedure:

1. Fill the stainless steel mixing tank with the proper quantity of #7 and start heating to 160F. Start addition of #1 and then #2 and start slow mixing. Cover the tank to avoid excess evaporation.
 2. When everything is completely uniform and well dissolved so that there are no particles left stop heating.
 3. With good agitation add #3 and start cooling.
 4. Mix firmly but avoid aeration.
 5. At 120F. start addition of #4 and when mass starts to harden add #6, if required, and finally #5 mix slowly until creme can be filled. Check pH.
- pH: 3.5-5.4

CREME RINSE

RAW MATERIALS	% By Weight
Stearalkonium Chloride	1.5
CETAL	3.0
Glyceryl Monostearate	0.5
Polysorbate 80	0.5
CELLOSIZ E QP-52,000H	1.0
Preservative, Perfume	q.s.
Water	q.s.

Procedure:

Add the CELLOSIZ E QP-5200H to the available water at room temperature while stirring. When hydration is complete, heat to 70-75C. Add the Stearalkonium Chloride and the Polysorbate 80. Heat the Glycerol Monostearate and the CETAL to 70-75C. Add this mixture to the solution while stirring vigorously. Remove the heat, and continue stirring until temperature reaches 35-40C. Add Preservative and Perfume.

Description:

A basic formula with excellent body and conditioning properties. Easy to pour because of the pseudoplastic property of CELLOSIZ E HEC, yet thick and concentrated in appearance. Opalescent.

Formula T55-45-1

CURLING GEL WITH CONDITIONER

RAW MATERIALS	% By Weight
Ammonium Thioglycolate (60%)	15.0
Ammonium Hydroxide (28%)	2.0
Triethanolamine (99%)	12.0
Pentasodium Pentetate	0.1
CELLOSIZ E Polymer PCG-10	1.0
UCARE Polymer JR-30M	0.5
Propylene Glycol	4.0
Preservative, Fragrance, Color	q.s.
Water	q.s.

Procedure:

Add Ammonium Thioglycolate, Ammonium Hydroxide, Triethanolamine, Pentasodium Pentetate and Preservative to rapidly stirring water in sequence so that the preceding ingredient is dissolved before adding the next. In a separate container, add CELLOSIZ E Polymer PCG-10 and UCARE Polymer to Propylene Glycol and mix to form a slurry. Add slurry to batch and mix until a uniform clear gel forms.

This formula provides conditioning to the hair during the permanent wave process. Clear and stable gel in the chemically active system. Substantive to hair providing conditioning properties.

CREAMY HYDROGEN PEROXIDE PERM NEUTRALIZER

Each 1000 ml of finished product contains:

INGREDIENTS	Grams/Liters
Deionized Water	800.00
Methylparaben	1.00
Disodium Phosphate	1.00
Sodium Lauryl Sulfate	28.00
Mineral Oil	10.00
Cetyl Alcohol	5.00
Ceteth-2	5.00
Hydrogen Peroxide, 35%	68.00
Phosphoric Acid, 85% (to pH 4.0)	0.80
Deionized Water	9.5 to 1 liter

Heat first part of water to 75C, add methylparaben, phosphoric acid and sodium lauryl sulfate with moderate mixing after each addition. Hold at 75C for five minutes.

Heat mineral oil, cetyl alcohol and ceteth-2 in separate kettle to 70C with stirring. Add this mixture in small increments to the aqueous phase with moderate stirring. Hold temperature at 70C for 15 minutes during agitation.

Carefully cool to 25C or room temperature. This cooling step is crucial and the optimum rate of temperature drop is 1C per 90 seconds.

When mixture is cool, add the hydrogen peroxide and stir for 5 minutes. Adjust pH to 4.0 with phosphoric acid and make up to final volume with deionized water.

Finished Formula Properties:

Appearance: White creamy emulsion

pH at 25C: 3.9-4.1

Specific Gravity at 25/25C: 0.995-1.05

Hydrogen Peroxide: 2.38+-0.2%

Max. loss after 20 hr. boil: 7%

HYDROGEN PEROXIDE PERM NEUTRALIZER

INGREDIENTS	% By Weight

SCALP TREATMENT

INGREDIENTS	% By Weight
Deionized Water	92.98
Propylene Glycol	2.0
HEXAPLANT RICHTER	3.0
COSMEDIA GUAR C-261	1.0
Kathon CG	.02
NUTRILAN I	1.0

Procedure:

- 1) After dissolving propylene glycol and HEXAPLANT in the water, use vigorous agitation to disperse and dissolve the Guar in system.
- 2) Using vigorous agitation, slowly sprinkle in NUTRILAN I and stir until dispersed uniformly.

Comments:

In herbal medicine, HEXAPLANT RICHTER has application of sensitive and easily irritated scalps and the maintenance for healthy hair.

SOURCE: Henkel: CLR Herbal Extracts: Formula H-4962

EXOTHERMIC PERMANENT WAVE LOTION
NORMAL HAIR FORMULA

INGREDIENTS	% By Weight
Water	60.00
Ammonium Thioglycolate, 60%	27.60
Hamp-ol 120	0.28
Aqueous Ammonia, 28%	3.43
Brij 35	0.78
Fragrance	0.18
Water	10.00
Emulsifier K-700	1.10
Sulfuric Acid	*
Aqueous Ammonia	*
Water	q.s.
* As needed to adjust pH	

Finished Formula Properties:

pH: 8.8-9.2
 Free Ammonia: 0.86-1.06 gms NH₃ per 100 ml
 Fill Weight: 95.0-98.1 gms
 Thioglycolic Acid Content: 16.56+/-0.1%

HEAT ACTIVATOR

INGREDIENT	% By Weight
Deionized Water	87.19
Hydrogen Peroxide, 35%	12.63
Disodium Phosphate	0.10
Phosphoric Acid	0.80

Finished Formula Properties:

pH: 3.9-4.1
 Hydrogen Peroxide Content: 4.42+/-0.10%
 Maximum Peroxide Loss: 7% loss after 20 hour boil
 Fill Weight: 19.8-20.8 gms

After mixing 91.0 ml of the Exothermic Wave Lotion with 20.0 ml of the Heat Activator, the following should be observed:

Regular Formula:

pH: 8.8-9.2
 Free Ammonia: 0.70-0.90 gms NH₃ per 100 ml
 Thioglycolic Acid Content: 9.2%
 Temperature Rise: 18-20C

Unlike normal permanent waves, the fill weights and the strengths of the lotions and the peroxide heat activator require very close tolerances. Too little or too much, either as fill weight or concentration of active, for either component, will cause variations in final activity or temperature.

FIRM HOLDING/HIGH HUMIDITY HAIR SPRAY

INGREDIENTS	% By Weight
STEPANHOLD EXTRA	15.00
Aminomethyl Propanol	0.38
Dimethicone Copolyol Surfactant	0.20
SDA-40A Alcohol	84.42
Fragrance	q.s.

Mixing Procedure:

Charge alcohol to mixing vessel. With moderate agitation, add AMP and mix well. Add STEPANHOLD EXTRA and mix until completely dissolved. Add Dimethicone copolyol and mix thoroughly. Add desired fragrance and mix well.

Formula PF-0158 suggested by Stepan Co.

FIRM HOLDING LUSTER SPRITZ

INGREDIENTS	% By Weight
STAPANHOLD EXTRA	15.00
Aminomethyl Propanol	0.38
Cyclomethicone	0.30
Panthenol	0.45
SDA-40A Alcohol	83.84
Fragrance	q.s.

Mixing Procedure:

Charge alcohol to mixing vessel. With moderate agitation, add AMP and mix well. Add STEPANHOLD EXTRA and mix until thoroughly dissolved. Add Cyclomethicone mixing thoroughly. Add panthenol and mix until dissolved. Add desired fragrance and mix well.

Formula PF-0159 suggested by Stepan Co.

CONDITIONING FIRM HOLD HAIR SPRAY

INGREDIENTS	% By Weight
STEPANHOLD EXTRA	13.75
Aminomethyl Propanol	0.35
AMMONYX KP A	0.50
Methyl Gluceth-20	0.25
SDA-40A Alcohol	85.15
Fragrance	q.s.

Mixing Procedure:

Charge alcohol to mixing vessel. With moderate agitation, add AMP and mix well. Add STEPANHOLD EXTRA and mix until completely dissolved. Add AMMONYX KP and mix thoroughly. Add methyl gluceth-20 and mix until completely dissolved. Add desired fragrance and mix well.

Formula PF-0160 suggested by Stepan Co.

GLOSSING HAIR CONDITIONER

RAW MATERIALS	% By Weight
A. Water	91.25
Citric Acid	0.50
B. TEGAMINE 18	1.25
TEGIN	3.00
Ceteth-2	1.50
ABIL Wax 2440	0.35
C. Propylene Glycol	0.90
ABIL Quat 3272	0.40
D. ABIL B 8851	0.25
Sodium Chloride - 25% aqueous solution	0.60
E. Color, Fragrance, Preservatives	QS

Procedure:

1. Heat the water to 70C. Add and disperse the Citric Acid.
2. Add the ingredients of phase B to phase A. One at a time, mixing between additions. After all additions are made mix until homogeneous.
3. Cool batch to 40C. Mix phase C and add to A/B. Use sweep mixer.
4. Add remaining ingredients. Mix until uniform using sweep mixer.

This conditioner provides exceptional hair control, wet and dry combability, and gives a soft gloss to the hair.

PUMP SPRAY CONDITIONER

RAW MATERIALS	% By Weight
TEGAMINE 18	1.00
Glycerin	10.00
Propylene Glycol	10.00
Preservatives	
Phosphoric Acid	to pH 5.0
Water	77.60
ABIL B 88183	1.00
Sodium Chloride	0.50

Heat the water to 65C. Add the Glycerin, Propylene Glycol, Dimethicone Copolyol, Sodium Chloride and preservatives. Mix until clear. Add the Stearamidopropyl Dimethylamine and adjust the pH. Cool and fill into pump spray units.

A combable pump spray conditioner that provides gloss and sheen to the hair.

HAIR CONDITIONER-WAVE SET

COMPONENT	% By Weight
Polymer JR-400	1.0
TERGITOL Nonionic Surfactant 15-S-12	0.1
"Hyamine" 1622	0.006
Deionized water, perfume	98.894

Preparation:

Dissolve the TERGITOL Nonionic Surfactant 15-S-12 and "Hyamine" 1622 in the water. Add the Polymer JR while stirring, and continue mixing until the resin is dissolved (approximately 40 minutes to 1 hour). The rate of hydration of the resin can be increased by heating (60C). Finally, add the perfume as desired.

HAIR CONDITIONER-WAVE SET WITH ALCOHOL

COMPONENT	% By Weight
Polymer JR-400	1.0
TERGITOL Nonionic Surfactant 15-S-12	0.05
Triethylene Glycol	0.05
Methyl p-Hydroxybenzoate	0.05
SDA-40	25.0
Deionized water, perfume	73.85

Preparation:

Dissolve the TERGITOL Surfactant 15-S-12 and preservative in the water. Add the Polymer JR while stirring, and continue mixing until the resin is dissolved. Introduce the alcohol into the formula. Finally, add perfume as desired. The use of hot water (60C) will increase the rate of solution for Polymer JR.

HAIR SETTING LOTION

COMPONENT	% By Weight
Polymer JR-30M	2.0
TERGITOL Nonionic Surfactant 15-S-12	0.1
Wilson's Protein WSP X-250	0.1
"Hyamine" 1622	0.006
Water	97.694

Preparation:

Dissolve TERGITOL Surfactant 15-S-12 and "Hyamine" 1622 in the available water. Add the Polymer JR-30M while stirring, and continue mixing until the polymer is dissolved. Stir in the protein WSP X-250, and continue agitation until solution is complete.

HAIR CONDITIONING CREME RINSE

RAW MATERIALS	% By Weight
GLUCQUAT 100	3.0
CELLOSIZÉ Polymer PCG-10	0.6
PROMULGEN D	4.5
CETAL	1.2
Hydolyzed Animal Protein	0.3
Deionized Water	90.4
Perfume and preservative	q.s.

Procedure:

Add CELLOSIZÉ Polymer PCG-10 to room temperature water with propeller agitation. Heat to 75C. When polymer is fully hydrated, dissolve GLUCQUAT 100, hydrolyzed animal protein and preservative, in that order, waiting for each ingredient to dissolve before adding the next. In a separate container, heat PROMULGEN D and CETAL to 75C, mix, and add to batch. Mix until uniform, and cool to room temperature with adequate mixing.

Description:

GLUCQUAT 100, the cationic substantive conditioning agent in this formula, provides good wet combing, manageability, shine and feel properties. PROMULGEN D acts as an o/w emulsifier. CELLOSIZÉ Polymer PCG-10 helps build viscosity.

SOURCE: Amerchol Corp.: GLUCQUAT 100: Formula T60-150-1M

STYLING AND CONDITIONING MOUSSE

CONCENTRATE FORMULA	% By Weight
AMERSIL DMC-357	2.0
AMERSETTE	2.0
SD Alcohol 40	15.0
Deionized Water	81.0
Preservative	qs

Concentrate Procedure:

Dissolve AMERSETTE in SD Alcohol 40. Once clear and uniform, add AMERSIL DMC-357, deionized water, and preservative in the order listed while waiting for each ingredient to dissolve before adding the next.

Aerosol Fill Procedure:

Fill aluminum mousse can and charge with A-46 propellant using a 90% concentrate to 10% propellant ratio.

Description:

AMERSIL DMC-357 is the sole ingredient in the formation of the mousse "foam" in the aerosol system. In addition, it contributes to the plasticization of the AMERSETTE styling resin while conditioning and adding shine to the hair.

HAIR GLOSS SPRAY
(A Spray On Hair Laminator)

INGREDIENT	% By Weight
A) Siltech HGC-5000	18.0
B) Siltech PF	4.0
SDA 40 Anhydrous*	19.0
Siltech FVC	58.8
Natural Citrus Bouquet #901219	0.1
Spectrasorb UV-9	0.1
Formula #MS-2S-45-10	

HAIR GLOSS SPRAY
(A Spray On Hair Laminator)

INGREDIENT	% By Weight
A) Tri Sil HGC-5000	18.0
B) Tri Sil PF	4.0
SDA 40 Anhydrous*	19.0
Tri Sil FVC	58.8
Natural Citrus Bouquet #901219	0.1
Spectrasorb UV-9	0.1
Formula #MS-2S-45-10	

* Note: If an alcohol-free product is desired, the alcohol can be replaced by Siltech FVC.

HAIR GLOSS SPRAY
(A Spray On Hair Laminator)

INGREDIENT	% By Weight
A) Siltech PF	4.0
B) Siltech HGC-5000	18.0
Siltech FVC	78.0
Formula #MS-2S-45-11	

Procedure:

Weigh A into a beaker. Prepare Phase B and mix with a propeller until clear and uniform. Add A to B while mixing. Mix until clear and uniform. Product can be dispensed through a Calmar Mark II High Viscosity spray dispenser.

Directions for Use:

Spray a small amount onto freshly shampooed hair. Massage or comb through hair for even distribution of product. Blow dry or allow hair to dry naturally. Seals and smooths the hair cuticle to provide increased shine to the hair.

HAIR GROOM TO GRADUALLY DARKEN GREY

RAW MATERIALS	Sequence	% By Weight
Liposorb S	1	2.8
Liposorb O	1	1.0
Liposorb S-20	1	2.8
Mineral Oil (80/90 vis)	1	19.0
Butylparaben	1	0.2
Water	2	67.8
Lead Acetate	2	4.1
Precipitated Sulfur	3	1.9
Fragrance	4	0.4

Manufacturing Procedure:

1. In main kettle heat Sequence 1 to 75C with Lightnin' mixing.
2. In a separate kettle, heat Sequence 2 to 78C. Mix until lead acetate is dissolved.
3. With good Lightnin' mixing, add Sequence 2 to Sequence 1. Mix for 15 minutes.
4. Cool to 40C and add Sequence 3 slowly. Mix until sulfur is completely wetted out.
5. Add Sequence 4. Cool to 25C. Package.

Formula No. 265

IMPROVED ETHNIC HAIR SPRAY

RAW MATERIALS	Sequence	% By Weight
Deionized Water	1	59.20
Silicone 193 Surfactant	1	3.40
Glycerine 96%	1	12.00
Lipo Polyol NC	1	12.00
Liponic EG-1	1	10.40
Methylparaben	1	0.25
Unicide U-13	1	0.20
Sequestrene Na3T	1	0.05
PVP K-30	2	2.50

Procedure:

1. Combine Sequence 1 ingredients using Lightnin' mixer agitation. Heat to 60C. Be sure that methylparaben, Unicide U-13 and Sequestrene Na3T are completely dissolved.
2. At 60C, slowly sprinkle in the PVP K-30. Continue Lightnin' mixer agitation until PVP K-30 is dissolved.
3. Cool batch to 25C and package.

Formula No. 243

HAIR LAMINATOR LIQUID

INGREDIENT	% By Weight
A) Siltech FVC	25.0
SDA 40 (Anhydrous)	5.0
B) Siltech F-10,000	6.0
Siltech F-60,000	52.5
Siltech F-1000	4.5
Siltech F-5	7.0

Procedure:

Weigh Phase A and mix. Add Phase B ingredients to Phase A while mixing. Mix until clear and uniform.

Formula #MS-2-91-1

LEAVE-ON HAIR CONDITIONER

INGREDIENT	% By Weight
A) Deionized Water	40.00
Siltech E-2145CG	2.00
B) Deionized Water	53.30
Pecogel GC-310	1.50
Tri-K "HMF" Complex	1.50
C) Propylene Glycol	1.25
Trisept M	0.15
D) Tristat IU	0.30

Procedure:

Predisperse the Siltech E-2145CG emulsion in water in side tank. Dissolve the Phase "B" ingredients one a time into remainder of water and mix until clear. Mix Phase "C" ingredients until clear and uniform. Add Phase "A" to Phase "B" while agitating. Then add Phases "C" and "D" and mix batch until uniform. Product has an off-white, translucent appearance. Product can be sprayed using a Calmar Mark II High Viscosity Head Yellow Orifice spray dispenser.

HAIR MOISTURIZER

INGREDIENTS	% By Weight
A. Deionized Water	78.8
Hydroxyethylcellulose	0.5
Sorbitol	1.0
B. Stearic Acid	3.0
Glyceryl Stearate and PEG 100 Stearate	2.0
Acetamide MEA	2.0
C12-15 Alcohols Benzoate	1.0
Dimethicone	0.5
C. LIPITEIN P	1.0
D. PEPTTEIN CAA	3.0
SOLLAGEN	5.0
E. Dimethicone	1.0
Propylene Glycol and Diazolidinyl Urea and Methylparaben and Propylparaben	1.0
Fragrance	0.2

Procedure:

Begin heating water to 80C; sift Hydroxyethylcellulose into water with constant agitation. Add rest of Part A. Mix until clear. Add Part B ingredients in order. Mix until homogeneous. Cool to room temperature. Slowly add LIPTEIN P, mix well. Add PEPTTEIN CAA and SOLLAGEN; mix until smooth. Add Part D ingredients. Mix until uniform.

Description:

This product is designed to moisturize and soften the hair, to increase manageability, and to reduce static fly-away. Apply to wet hair after shampooing; comb through hair and style as normal.

Formula: 614-09

HOT OIL TREATMENT

INGREDIENTS	% By Weight
A. Cottonseed Oil	86.9
Jojoba Oil	1.0
C12-15 Alcohols Benzoate	2.0
B. LIPITEIN P	10.0
C. Fragrance	0.1

Procedure:

In a suitable vessel, combine Part A ingredients. Mix until clear. Add Part B slowly. Add fragrance; mix until uniform.

Description:

This golden, liquid hair treatment should be warmed under hot, running water before using to activate the lipid. After shampooing, apply to wet hair; massage or comb through; let stand for 5 minutes; rinse. Hair will have more shine, softness, better combability and manageability as a result of LIPITEIN P.

Formula: 614-07

HAIR MOISTURIZING SPRAY

RAW MATERIALS	% By Weight
Deionized Water	94.5
INCROMECTANT LAMAE	3.0
CROSILKQUAT	1.0
INCROQUAT MINK-85	0.5
Germaben II	1.0

Procedure:

Warm water to 45C. Add the ingredients, mixing after each addition until clear.

CROSILKQUAT and INCROQUAT MINK-85 are an elegant way to moisturize the hair and give good static control. This spray is recommended for permed hair and relaxed hair where extra moisture may be needed.

Formula HP-151

HAIR SPRITZING SPRAY

RAW MATERIALS	% By Weight
CROVOL A-70	0.50
Aminomethyl propanol	0.45
Gantrez ES-225	9.00
Deionized Water	11.36
Ethanol SDA-40	78.19
CROSILKQUAT	0.50

Procedure:

Dissolve the neutralizer (AMP) in the alcohol. Add the Gantrez ES resin with mixing. Mix in Crovol A-70, followed by the water. When clear, add CROSILKQUAT and mix well.

The combination of CROVOL A-70 and CROSILKQUAT give good curl retention even under humid conditions. CROSILKQUAT helps prevent flaking of the resin.

Preservative	q.s.
Fragrance	q.s.
Herbasol Extracte (Burdock, Marigold, Birch, Wheat Germ)	q.s.

Procedure:

1. Weigh the ingredients of Phase A (Oil Phase) into a beaker. Heat to 60C to melt.
 2. In a separate beaker weigh the water portion & heat to 60C.
 3. Add the Shercoquat IIS & mix until all is dissolved.
 4. Add Phase B to Phase A & mix until uniform & smooth. Cool to 25C.
 5. Adjust pH to 5.0-7.0 with TEA sol'n. Add preservative & fragrance.
- Formula SO-017

STYLING MOUSSE

RAW MATERIALS	% By Weight
Part I:	
Celquat L-200 (2% in Water)	50.00
Schercoquat IEP	2.50
Glycerine	7.00
Deionized Water	q.s. to 100
Part II:	
Alcohol SDA 40 Reg.	20.00
PVP/VA E-735	2.00
Lanexol AWS	0.50
Perfume Oil	q.s.

Procedure:

Mix all ingredients in Part I in the order listed. Mix all ingredients in Part II in the order listed. Add Part I to Part II and mix thoroughly. Check pH. It should be between 6.5 and 7.0.

HIGH VISCOSITY SELECTIVE CREME RINSE CONDITIONER

INGREDIENTS	% By Weight
A Carsquat SDQ-85	1.900
Ethospense CA-2	2.500
Barlene 18S	1.500
Aldo MSA	0.500
Stearyl Alcohol	0.100
Phenoxyethanol	0.300
B Citric Acid	1.750
Sodium Chloride	0.200
Water, deionized	91.215
Sodium Hydroxide (10% solution)	.035
pH: 3.2+-0.1	
Viscosity: approx. 10,500 cps	

Procedure:

Heat all components in Phase A to approximately 60-65C with mixing. With continuous agitation, heat Phase B to approximately 65-70C. Add Phase A slowly to Phase B. When blend is uniform, discontinue heating and add sodium hydroxide. Continue mixing the batch until temperature has cooled below approximately 35C.

Make up any water, dye and fragrance lost in processing; note the choice and amount of fragrance may alter the viscosity.

Formulation U-15-8

CREME RINSE CONDITIONER

INGREDIENTS	% By Weight
Carsquat SDQ-85	1.3
HYSTAR CG	3.0
Glycomul O	1.9
Aldo USA	2.4
Cetyl Alcohol	1.8
Water, deionized	89.6
pH: 3.5-4.0	
Viscosity: approximately 2500-4000 cps	

Procedure:

Add the HYSTAR CG to the water and heat to 80C. In a separate container, combine the Carsquat SDQ-85, Lonzest SMO, Aldo USA and cetyl alcohol and heat to 75C. With stirring, pour the oil phase into the polyol/water solution. Stir at slow to moderate for about 30 minutes. Then cool to approximately 45C and package.

Formula E-127-1

HKP CHEMICAL SCAVENGER & CONDITIONER FOR STRAIGHTENED & RELAXED HAIR

INGREDIENT	% By Weight
Deionized Water	91.00(+)
Acrysint 400 *	0.10
Acetamide MEA	5.00
Finsolv TN	0.20
dl-Panthenol	1.00
Tri-K HKP	1.00
Citric Acid	0.25
Methyl Paraben	0.20
Tri-Stat I.U.	0.20
Sorbic Acid	0.20
D.C. 193 Surfactant	0.50
New Sulfur W	0.20
Fragrance	0.25

Rationale:

1. Acid conditioning pH-Neutralizes alkalinity & conditions.
2. Panthenol oxidizes in presence of Bromate.
3. Newsulfur counteracts irritation.
4. Finsolv adds shine & comb-ability.
5. DC 193 adds shine & comb-ability.

* Vary gel/viscosity here

HAIR CREAM

RAW MATERIALS	% By Weight
A. Cetyl Alcohol	6.0
Luvitol EHO	10.0
Mineral Oil	5.0
B. Luviquat Mono CP	10.0
1,2-Propylene glycol	2.0
Water	67.0
Preservative	q.s.
C. Perfume	q.s.

Preparation:

Heat phases A and B separately to ca. 75C. Stir phase B into phase A and continue stirring until cold. At ca. 35 add phase C.

Properties:

White, softish cream that can be worked well into the hair. Improves wet-combability, imparts sheen to hair and prevents dry hair from charging electrostatically.

Application:

Work uniformly into the damp hair, leave and then wash out with water.

3. Cool to 120 degrees F.
4. Add MACKSTAT DM and fragrance.
5. Cool and fill.

NATURAL LIPID STYLING MOUSSE

RAW MATERIALS	% By Weight
PVP/VA E335	4.5
SDA 40 Alcohol	21.5
MACKPRO NLP	4.0
Deionized Water, Fragrance, Dye qs to	100.0

Procedure:

1. Combine components and blend until clear.
2. Pressurize with suitable propellant.

LIGHT MOISTURIZING HAIR CREME

RAW MATERIALS	% By Weight
MACKESTER TDO	15.0
Anhydrous Lanolin	3.5
White Petroleum	3.5
Castor Oil	3.0
MACKOL 1618	2.0
Polysorbate 20	2.0
Triethanolamine	0.6
Carbopol 940	0.6
Disodium EDTA	0.1
MACKSTAT DM	qs
Deionized Water, Fragrance qs to	100.0

Procedure:

1. Melt first seven components and heat to 170 degrees F.
2. Add Disodium EDTA to water and completely disperse Carbopol 940.
3. Slowly add oil to water phase and blend until homogenous.
4. Add fragrance, preservative, and cool.

NO BASE HAIR RELAXER

INGREDIENTS	% By Weight
A) T-Wax	10.00
Brox OL10	1.50
Carnation	15.00
ProtoPET	10.00
B) Ivarlan 3401	2.00
Propylene Glycol USP	7.00
Foam-Coll C	0.30
Water	36.20
C) Sodium Hydroxide (100%)	2.00
Water	6.00

Procedure:

Heat Phase A (Emulsifying Wax, Oleth 10, Mineral Oil and Petrolatum) to 70 Deg. C. A clear solution should result. Heat Phase B (Water, Ivarlan, Propylene Glycol and Foam-Coll 4C) to 50 deg. C. Carefully prepare Phase C. Mix Phase C until clear and uniform and set aside. Add Phase B to Phase A - a thin milky emulsion forms. Cool to around 45 deg. C - the emulsion will now start to thicken - it is important not to add the sodium hydroxide solution until this happens. After the thickening starts add Phase C (the Sodium Hydroxide solution) slowly. The emulsion will thicken drastically. Improved agitation is necessary. After all the sodium hydroxide solution has been added, agitation should be stopped as soon as the cream is homogeneous. Overstirring at this stage will result in a cream with poor stability.

SOURCE: TRI-K Industries, Inc.: Formula #MS-2-109-1

NON-AEROSOL FINISHING SPRAY

RAW MATERIALS	% By Weight
PHOSPHOLIPID EFA	0.60
SD Alcohol 40	94.10
Resyn 28-1310	3.75
Water	1.20
Aminomethyl Propanol	0.35

Add Resyn 28-1310 to alcohol slowly with adequate agitation, mix until well dispersed. Add aminomethyl propanol to neutralize, and mix until dissolved. Add remaining ingredients, color, fragrance and package.

A light, holding spray that provides a conditioning sheen through the use of PHOSPHOLIPID EFA.

PROTEIN PAK FOR HAIR

INGREDIENTS	% By Weight
A. Deionized Water	80.8
Hydroxyethylcellulose	1.0
Propylene Glycol	1.0
B. Stearic Acid	3.0
Glyceryl Stearate and PEG 100 Stearate	2.0
C. PROTECTEIN	10.0
D. Propylene Glycol and Diazolidinyl Urea and Methylparaben and Propylparaben	1.0
Dimethicone	1.0
Fragrance	0.1
F, D & C Yellow No. 5 (0.01%)	0.1

Procedure:

Begin heating water to 80C; sift Hydroxyethylcellulose into water with constant agitation. Add rest of Part A. Mix until clear. Add Part B ingredients in order. Mix until homogeneous. Add PROTECTEIN slowly. Cool to room temperature. Add Part D ingredients. Mix until uniform.

Description:

This lotion, after-shampoo treatment is designed to provide highly substantive, durable protein treatment to the hair. It will improve the tensile strength and integrity of the hair for high fashion styling. After shampooing, smooth through wet hair; let stand 1-2 minutes; rinse with warm water as this will enhance the protein substantivity.

Formula: 614-11

ROOT STIMULATOR

INGREDIENTS	% By Weight
A. Deionized Water	78.8
Hydroxyethylcellulose	1.0
Propylene Glycol	3.0
B. Sulfated Castor Oil	10.0
C. PEPTEIN AH	5.0
ELASTEIN 5000	1.0
D. Propylene Glycol and Diazolidinyl Urea and Methylparaben and Propylparaben	1.0
Fragrance	0.1
F, D & C Yellow No. 5 (0.01%)	0.1

Procedure:

Begin heating water to 80C; sift Hydroxyethylcellulose into water with constant agitation. Add rest of Part A. Mix until clear. Add Part B. Mix until homogeneous. Add PEPTEIN AH and ELASTEIN 5000 slowly. Cool to room temperature. Add Part D ingredients. Mix until uniform.

This lotion is designed to deep cleanse the hair follicle and strengthen the hair shaft.

Formula: 614-12

PROTOTYPE AEROSOL HAIR SPRAY (FIRM HOLD)

RAW MATERIALS	% By Weight
---------------	-------------

Phase I:

Demineralized water	84.59
Eastman AQ 38S polymer	15.00

Phase II:

Fragrance (Novarome KE-99)	0.40
Dow Corning 190 silicon	0.01

Procedure:

1. Heat Phase I to 80-85C and hold until the polymer is well dispersed.
2. Cool to 50C after dispersion is complete; add Phase II and mix until well dispersed.
3. Continue mixing to 25C; weigh and compensate for water loss.
4. Filter product to remove any solids before weighing material into aerosol container.
5. At 25C charge Dymel A (dimethyl ether) at 30 weight percent.
6. Agitate aerosol container to insure solution of propellant. Concentration of Eastman AQ 38S polymer = 10.5%.

PROTOTYPE PUMP HAIR SPRAY (REGULAR HOLD)

RAW MATERIALS	% By Weight
---------------	-------------

Phase I:

Demineralized water	92.99
Eastman AQ 55S polymer	6.00

Phase II:

Germall II preservative	0.30
Methyl paraben USP	0.30

Phase III:

Fragrance (Novarome KE-99)	0.40
Dow Corning 190 silicon	0.01

Procedure:

1. Heat Phase I to 80-85C and hold at that temperature for 15 minutes or until the polymer is well dispersed.
2. Remove the heat and continue mixing after the Eastman AQ polymer is dispersed until the product temperature reaches 60C.
3. Add Phase II and continue mixing until dissolved.
4. Cool to 40C and add Phase III.
5. Cool to room temperature, weigh, and compensate for any water loss.
6. Filter and package.

LIP BALM

INGREDIENTS	% By Weight
A. Cocoa Butter	45.0
Glyceryl Monostearate	10.0
Petrolatum	40.0
B. DERMATEIN GSL	4.0
C. Dimethicone	0.9
Menthol	0.1

Procedure:

Combine Part A ingredients in a suitable vessel and heat to 70C; mix until clear. Slowly add DERMATEIN GSL; mix until smooth. Add Part C ingredients in order; mix until uniform. Cool to 50C; pour into appropriate container; cool to room temperature.

Description:

This soothing, rich pomade demonstrates how DERMATEIN GSL helps restore chapped and weather-beaten lips. DERMATEIN GSL works to replace the lipid lost from dry skin. DERMATEIN GSL rejuvenates and protects lips by increasing the skin's ability to bind moisture.

LIPSTICKS WITH VOLATILE SILICONES

RAW MATERIALS	% By Weight
1. Castor-oil	11.5-23.5
2. Color grind (D&C colors in castor oil)	3.0-15.0
3. Dow Corning 345 fluid	15.0
4. Miglyol 812	17.5
5. Isopropyl myristate	8.0
6. Mineral Oil Light	3.0
7. Aerosil 200	1.0
8. Bees wax	14.0
9. Carnauba wax	8.0
10. Ozokerite 145	2.0
11. Lanolin	5.0
12. Pearl pigments	10.0-15.0

Manufacturing Process:

The ingredients of the color grind are mixed with castor oil, the mixture is heated to 60C and passed twice over a three-roll mill.

Components 1-7 are mixed and homogenized (e.g. with an Ultra Turrax). After items 8-11 are added and the mass is heated to about 80C until melting.

Finally 10-15% pearl pigments (item 12) are added to the melted mixture and stirred until the mass is homogeneous.

When pouring the sticks, the casting machine and the mixture should have a temperature of about 70C and the mold should be preheated to 60C.

Lotions

ACNE TREATMENT LOTION

INGREDIENT	% By Weight
A VEEGUM	0.90
RHODIGEL	0.40
Deionized Water	80.70
B Propylene Glycol	6.00
C LIPACIDE CCO	2.00
Laureth-4	5.00
Acetylated Lanolin Alcohol	5.00
D Preservative	q.s.
Citric Acid to pH 5.0	q.s.

Preparation:

Dry blend VEEGUM and RHODIGEL and add to water, mixing with maximum available shear until smooth and uniform. Add B to A and mix until uniform. Blend C ingredients and heat to 50C with mixing. Add C to (A+B) with high speed mixing until a uniform emulsion is formed. Cool to 30C and add D.

Consistency: Low Viscosity Lotion (Viscosity 700-900 cps)

Suggested Packaging: Plastic or Glass Bottles.

Features:

This lotion contains LIPACIDE CCO, Capryloyl Collagenic Acid, which has been shown to be an effective bactericide against propionibacterium acnes, staphylococcus aureus and staphylococcus epidermis, strains normally associated with the skin disease acne. This emulsion has been stabilized and thickened by the synergistic combination of VEEGUM and RHODIGEL and contains no occlusive oils or benzoyl peroxide.

ALL-PURPOSE SKIN CONDITIONING LOTION

RAW MATERIALS	% By Weight
Oil Phase:	
PROMULGEN G	5.0
GLUCATE SS	2.0
GLUCAMATE SSE-20	2.0
SOLULAN 5	0.5
Mineral Oil, 70 vis.	
Water Phase:	
BIOCARE Polymer HA-24	3.8
GLUCAM E-10	3.5
Water	80.2
Germaben IIE	1.0

Procedure:

Add the water phase (minus the BIOCARE Polymer HA-24 and Germaben IIE) at 85C to the oil phase at 85C with mixing. Add the Germaben IIE at 75C. Continue to mix to 40C. Add the BIOCARE Polymer HA-24 with mixing while cooling to 30C.

Description:

White, glossy, medium viscosity, nonionic o/w lotion. BIOCARE Polymer HA-24 is substantive to the skin and forms a uniform viscoelastic matrix which moisturizes the skin. The combination of o/w GLUCAMATE SSE-20 and w/o GLUCATE SS nonionic emulsifiers gives a stable and mild system. PROMULGEN G and SOLULAN 5 give body to the system while also acting as auxiliary emulsifiers. GLUCAM E-10 serves as a humectant and emollient contributing to the positive afterfeel.

BODY LOTION

RAW MATERIALS	% By Weight
Oil Phase:	
AMERSIL ME-358	6.0
Cyclomethicone Pentamer	3.0
AMERCHOL L-101	3.0
Polyglycerol Methacrylate	10.0
Water Phase:	
Glycerin	5.0
Deionized water	73.0
Preservative and perfume	q.s.

Description:

Fluffy, white, glossy cream. AMERSIL ME-358 allows emulsification of the cyclomethicone pentamer, and together they provide an elegant, velvety feel on the skin. AMERCHOL L-101 adds to the emolliency and smooth appearance while providing good stability to the overall product, especially in freeze-thaw evaluations.

BANANA HAND LOTION

RAW MATERIALS	Parts By Weight
Water	568.0
Carbomer 934	2.0
GMS-SE	4.0
Avocado Oil	16.0
Lipovol A	
Rosswax 573	4.0
Coconut Oil #76	16.0
Ross Jojoba Oil	4.0
TEA	4.0
Germaben II	4.0
Fragrance GK-17	q.s.

Procedure:

Heat the water to 60C under agitation and slowly add the Carbomer 934. When the water is fully mixed add the 573, GMS, Avocado Oil, Coconut Oil and Jojoba Oil that have been heated to 65C in separate kettle. As soon as the Oil Phase has been mixed well, add the Germaben II and then the TEA under high agitation, then the fragrance. Cool to 55C for filling.

PEACH HAND LOTION

RAW MATERIALS	Parts by Weight
Water	568.0
Carbomer 934	2.0
Rosswax 573	4.0
GMS-SE	4.0
Almond Oil	16.0
Lipoval ALM	
Coconut Oil #76	16.0
Ross Jojoba Oil	4.0
TEA	4.0
Germaben II	6.0
Fragrance GK-16	q.s.

Procedure:

Heat the water to 60C under agitation and slowly add the Carbomer 934. When the water is fully mixed add the 573, GMS, Almond Oil, Coconut Oil, and Jojoba Oil that have been heated to 65C in a separate kettle. As soon as the Oil Phase has been mixed well, add the Germaben II, the Fragrance, and then the TEA under high agitation. Cool to 55C for filling.

BASIC BODY LOTION WITH COCOA BUTTER

INGREDIENT	% By Weight
Demineralized Water	74.7000
1,3 Butylene Glycol	2.0000
Amigel	0.1000
Tri-Sept M	0.2000
Tri-Sept P	0.0500
Cocoa Butter	5.0000
Isopropyl Myristate	2.0000
Lexemul EGDS	3.5000
Emulgin B-1	3.0000
Stearalkonium CL 25%	3.0000
White Petrolatum	2.0000
Carnation 70	2.5000
Stearic Acid XXX	1.0000
TEA 99%	0.8000
Floral Fragrance T8201	0.1500
Abiol	0.2000

Procedure:

Pre-blend the Parabens with the Butylene Glycol heat if necessary to dissolve.

Cool to near room temp, disperse the Amigel completely and set aside.

Heat water to 75C., and add the glycol blend w/prop agitation.

Mix until fully dissolved and lump-free.

Combine the oils and waxes and heat to 75C. to dissolve.

Add the oil phase to the water phase with prop agitation and mix thoroughly.

Add the TEA and mix until creamy. Switch to sweep agitation and begin cooling.

Add the Abiol at 50C. Continue cooling to room temp.

Add fragrance at 45C. Continue mixing until uniform and R.T.

Adjust pH to 7.5 approx. with TEA.

BENZOYL PEROXIDE LOTION

INGREDIENTS	% By Weight
Part A:	
Water, deionized	79.30
KELTROL T xanthan gum	0.50
Methyl Parasept methylparaben	0.20
Part B:	
SOLULAN 98 laneth-10 acetate	7.00
Benzoyl peroxide 70%, wet	6.50
Promulgen G stearyl alcohol and ceteareth 20	3.00
Dehydag Wax 16 cetyl alcohol	2.00
Emerest 2314 isopropyl myristate	1.50

Part A:

1. With good agitation, hydrate the KELTROL T in the deionized water (10-15 minutes using a high-shear mixer).
2. When fully hydrated, add the methyl paraben.
3. Heat to 77C (170F).

Part B:

1. Melt the Promulgen G and Dehydag Wax 16 by heating to about 77C (170F).
2. Add to Part A at 77C (170F) and mix until homogeneous.
3. Remove from heat and start cooling.
4. Blend the rest of the ingredients.
5. Add to the liquid mix cooled to about 38C (100F) and mix again.
6. Homogenize or pass through a colloid mill.

BODY AND HAND LOTION

INGREDIENTS	% By Weight
Oil Phase:	
Di(2-Ethylhexyl) Adipate	4.80
Stearic Acid	2.90
"Nimcolan T"	0.50
Cetyl Alcohol	0.40
Glycerol Monostearate	1.00
Propyl p-Hydroxybenzoate	0.05
Water Phase:	
Triethanolamine, 99%	0.95
Propylene Glycol	4.80
Polymer JR-400	0.20
Methyl p-Hydroxybenzoate	0.10
Water	83.90
Fragrance--Alpine Aromatics No. 8-911	0.40

Preparation Procedures:

1. Heat the oil phase to 70C.
2. In a separate container, add the Polymer JR-400 to 10 per cent of the water and stir until hydrated.
3. In a third container, heat the remaining water, triethanolamine, propylene glycol, and methyl p-hydroxybenzoate to 70C.
4. Add the water phase and then the Polymer JR-400 solution to the oil phase while stirring vigorously.
5. Continue the stirring at a moderate rate until the temperature reaches 40C., when the perfume is added.
6. Stirring is ceased when the temperature reaches 35C or lower. Viscosity--1,800 to 2,200 cps. at 25C.

Features:

- * Positive after-feel
- * Smoothness
- * Improvement in ease of rub-in
- * Assistance in retention of emollients
- * Viscosity building effects

CATIONIC HAND LOTION

RAW MATERIALS	% By Weight
Oil Phase:	
AMERCHOL L-101	5.0
SOLULAN 98	2.0
CETAL	1.0
Glyceryl Stearate (and) PEG-100 Stearate	4.0
Water Phase:	
Part A:	
QUATRISOFT POLYMER LM-200	0.5
Water	19.5
Part B:	
Steapyrium Chloride	0.1
Glycerin	2.0
Water	65.9
Preservative and Perfume	q.s.

Description:

A medium viscosity, white, glossy lotion. QUATRISOFT POLYMER LM-200 contributes to the overall emollient afterfeel by virtue of its substantive cationic nature. AMERCHOL L-101 (w/o) and SOLULAN 98 (o/w) act as a nonionic emulsifier pair to ensure emulsion stability.

Procedure:

Add QUATRISOFT POLYMER LM-200 to the water (water phase, part A). Mix until thoroughly dispersed, then heat to 45-50C. Mix until clear and uniform. Add water phase, part A to water phase, part B while mixing while heating to 70C. Heat oil phase to 70C. Add water phase at 70C to oil phase at 70C while mixing. Cool to 35C.

SOURCE: Amerchol Corp.: QUATRISOFT POLYMER LM-200: Formula T53-190-1

CATIONIC LOTION

INGREDIENTS	% By Weight
Part A:	
EMULGADE F Special	8.0
MYRITOL 318	5.0
Silicon 200 Fluid (350 cs)	0.5
Part B:	
Deionized Water	81.4
Glycerin	3.0
Dehyquart SP	1.0
Part C:	
Fragrance	0.1
Germaben II-E	1.0

Procedure:

- 1) Heat Part A and Part B to 70-75C.
- 2) Add Part A to Part B at 70-75C, with moderate agitation and stir at temperature for 15 minutes.
- 3) Let cool, while stirring, to 40-45C and add Part C.
- 4) Stir down to 25-30C and package.

Comments:

Emulgade F Special is a self-emulsifying base used for the preparation of oil-in-water emulsions. Because it is nonionic, cationic substances can be easily formulated into creams and lotions.

This formulation is a light cream and is characterized by a non greasy rubout, quick penetration and a soft, non-drying after-feel.

Preservative	q.s.
Water	100.0
C. Extrapone Chamomile Special	1.0
Perfume Oil	q.s.

Preparation of Carbopol Gel:

Carbopol 940	1.0
Triethanolamine	0.6
Water	up to 100.0

The water is added in small amounts to the weighed Carbopol 940 and stirring is maintained until all lumps have dissolved. The triethanolamine is added and stirring continued until a clear gel is formed.

Preparation of the lotion:

(A) and (B) are heated separately to 75-80C. and (B) is emulsified into (A). (C) is stirred in below 40C.

Formula 1.3.8

CLEANSING LOTION #2

RAW MATERIALS	% By Weight
A. Schercemol 318	6.00
Schercemol DID	8.00
Propylene Glycol	5.00
Schercemol PGMS	2.00
Arlacel 165	2.50
Cetyl Alcohol	0.30
B. Water, Deionized	68.75
Carbopol 941	0.75
C. Propylene Glycol	0.70
Methyl Paraben	0.20
Propyl Paraben	0.10
Germall 115	0.20
D. Water, Deionized	4.50
Potassium Hydroxide (40%)	0.75
E. Fragrance	0.25

Procedure:

1. Prepare Part A. Heat ingredients to 75C with slow agitation.
2. Prepare Part B by dispersing Carbopol 941 in water using high speed agitation until a smooth slurry is obtained. Then heat the dispersion to about 80C until a smooth, viscous solution is formed.
3. Dissolve preservatives in propylene glycol by warming solution to 50C. Add Part C to Part B.
4. Add Part B & C to Part A with good mixing.
5. When batch is cooled to 55C, add Part D. Q.S. with fragrance at room temperature.

SOURCE: Scher Chemicals, Inc.: Formula

ASTRINGENT LOTION

INGREDIENTS	% By Weight
Part A:	
Water	54.50
COSMEDIA POLYMER HSP-1180	5.00
Part B:	
3A Ethyl Alcohol	40.00
Allantoin	0.50
Part C:	
Dyes and Fragrance	q.s.

Procedure:

Pre-mix Part A. Pre-mix Part B. Add Part B to Part A, under agitation. Add individual components of Part C. Continue stirring until product is homogeneous. Fill off.

Comments:

This relatively simple astringent formula provides a nice feeling to the skin due to the presence of COSMEDIA POLYMER HSP-1180. As such, it can even function as an after-bath splash.

CLEAR BODY LOTION

RAW MATERIALS	% By Weight
ABIL B 8863	1.00
Carbomer 940	0.33
SD Alcohol 40	33.00
Water	64.95
Triethanolamine (99%)	0.22
Polysorbate 80	0.50
Perfume	QS

Procedure:

Disperse the carbomer in the alcohol, and mix until it goes into solution. Load the Polysorbate 80 and approximately 3/4 of the water; mix until uniform. Stir the Dimethicone Copolyol and the Triethanolamine into the remaining 1/4 water. Slowly stir the Triethanolamine solution into the carbomer solution. The lotion will gel and turn clear as the triethanolamine is added. The perfume either can be added with the alcohol or stirred into the finished formulation.

Comments:

This product is designed for use after a shower or bath to deliver fragrance and a light emollient effect to the skin. As given, the formulation is a thick gel. Lower viscosity can be achieved if the amount of Carbopol/TEA is cut back or if the final lotion is diluted with water.

COLD MIX - W/O EMULSION: DIHYDROXYACETONE LOTION

RAW MATERIALS	% By Weight
A. ABIL WE-09	5.0

CONDITIONING FACIAL LOTION

INGREDIENTS	% By Weight
Part A:	
LANTROL HP-2073	2.5
ACETOL 1706	5.0
CUTINA GMS	2.0
PEG-100 Stearate	2.0
LANETTE 16	1.0
EUMULGIN B-1	0.5
Propylparaben	0.1
Part B:	
Deionized Water	81.0
Propylene Glycol	5.0
Methylparaben	0.2
Part C:	
Emeressence 1160	0.7

Procedure:

- 1) Heat Part A to 75-80C.
- 2) Heat Part B to 75-80C.
- 3) Add Part A to Part B at 75-80C and stir 15 minutes at temperature.
- 4) While stirring, cool to 40C and add Part C.
- 5) Cool to 30C and package.

Comments:

This facial lotion has very good gloss, is non-greasy on application and leaves the face with an elegant after-feel.

SOURCE: Henkel: High Purity Lanolins: Formula H-4986

BODY LOTION

B2 Glycerin	3.00
B3 Triethanolamine	0.20
C- Germaben II	1.00
D- Rose Extract	0.50

Phase B:

In the main beaker, disperse B1 together at 75-85C.

Add Glycerin.

Add Triethanolamine to neutralize the Carbopol gel.

Mix until a smooth gel is obtained.

Phase A:

Blend Phase A1 to at least 85C.

Once completely clear add A2.

Blend Phase A together until a homogeneous oil phase is obtained.

Add Phase A to Phase B with continuous mixing at 80-85C for 15 minutes.

Cool batch to 60C then add C.

Continue to cool batch to 30C then add D.

DEEP MOISTURIZING LOTION

INGREDIENTS	% By Weight
Part A:	
ULTRA LANTROL HP-2074	10.0
CETIOL S	13.0
LANETTE 16	4.0
EMERSOL 132	3.0
CUTINA GMS	3.0
GENEROL 122 E-10	1.0
Part B:	
Deionized Water	55.0
Propylene Glycol	5.0
Carbopol 940* (3% solution)	5.0
Part C:	
Germaben II	1.0
Procedure:	
1) Heat Part A to 75-80C.	
2) Heat Part B to 75-80C.	
3) Add Part A to Part B at 75-80C and stir 15 minutes at temperature.	
4) At 60C, homogenize for 15 minutes.	
5) While stirring, cool to 40C and add Part C.	
6) Cool to 30C and package.	

Note: *Carbopol 940 is being used here as a slip agent, not as a viscosity agent so no TEA is used.

Comments:

This formulation is a high gloss lotion with good lubricity and rub-in properties. Even with 10% Lanolin Oil, this is a non-greasy product that leaves the skin with a soft protective feeling.

SOURCE: Henkel: High Purity Lanolins: Formula H-4985

BODY LOTION

Heat A and B each to 65-70C, stir B into A, stir C into AB.
Temperature stability: 8 weeks at 45C.

SOURCE: Wacker Silicone: Formulation 914 AH

DEEP MOISTURIZING LOTION

RAW MATERIALS	% By Weight
Part A:	
PHOSPHOLIPID EFA	4.00
Steareth-21	0.40
Water	82.00
Part B:	
Steareth-2	1.60
Anhydrous Lanolin	1.50
Petrolatum	3.00
Octyldodecyl Myristate	2.00
Cetearyl Alcohol	4.00
Dimethicone (100 cS)	1.50

Combine ingredients in both phases separately and heat to 65C. Homogenize (B) into (A) with continued heating until sufficiently mixed. Stir-cool to 40C, then add fragrance, color and preservative as needed before filling.

This after-bath lotion gives the benefits of potent skin conditioners while eliminating the tackiness associated with lanolin and petrolatum through the unique emolliency provided by PHOSPHOLIPID EFA.

HAND AND BODY LOTION

RAW MATERIALS	% By Weight
Part A:	
PHOSPHOLIPID EFA	4.00
Water	83.00
Part B:	
Steareth-2	2.00
Light Mineral Oil	4.00
Cetearyl Alcohol	3.00
Octyldodecyl Myristate	2.50
Dimethicone (100 cS)	1.50

Combine ingredients in both phases separately and heat to 65C. Homogenize (B) into (A) with continued heating until sufficiently mixed. Stir-cool to 40C. Add fragrance, color, and preservative as needed and fill.

A superior product designed for after-bath use on traditionally dry areas such as hands, elbows and heels. PHOSPHOLIPID EFA is strongly substantive towards skin providing non-greasy moisturizing and a pleasant after feel.

SOURCE: Mona Industries, Inc.: PHOSPHOLIPID EFA: Formulas

DRY SKIN LOTION

INGREDIENTS	% By Weight
Part A:	
Water, deionized	72.70
Glycerine	4.00
KELTROL T xanthan gum	0.55
Magnesium aluminum silicate, high viscosity	0.45
Methyl Parasept methylparaben	0.20
SORBISTAT-K potassium sorbate	0.05
Sodium benzoate	0.05
Part B:	
White Protopet #1S petrolatum, USP	6.00
Arlacel 165 glyceryl stearate and PEG 100 stearate	5.00
Finsolv TN C12-C15 alcohol benzoate	4.50
Acetulan acetylated lanolin alcohol	4.00
POLYSYNLANE squalane substitute	2.50
Perfume	to suit
Color	to suit

Procedure:

1. Dry blend KELTROL T and magnesium aluminum silicate together, and add to 82C (180F) water with medium agitation. Mix for 20 minutes using a Lightnin'-type mixer.
2. Add the remainder of Part A ingredients and mix for 5 minutes.
3. Blend Part B ingredients together and heat to 71C (160F) until dissolved.
4. Add Part B to Part A and mix for 5 minutes. Mix slowly to avoid bubble formation.

KELTROL T xanthan gum modifies the rheological properties of this lotion. The shear thinning property conferred by KELTROL T provides ease of application and results in a smooth skin feel when the highly emollient lotion is applied. KELTROL T also provides excellent stability to the lotion.

EMOLLIENT LOTION

RAW MATERIALS	% By Weight
A VEEGUM PRO	1.5
Water	83.8
B Triethanolamine	0.1
Glycerin	3.5
C Marcol 130	3.6
Petrolatum	0.4
Stearic acid XXX	1.6
Cetyl alcohol	1.5
Kessco Glycerol Monostearate SE	1.4
Acetulan	2.0
Dow Corning 200 Fluid	0.6
Preservative	q.s.

Procedure:

Heat the water to 70-75C, then slowly add the VEEGUM PRO while agitating at maximum available shear. Mix until smooth. Add B to A with slow agitation until smooth. Maintain A/B at 70 to 75C, heat C to 75 to 80C. Add C to A/B and mix until cool. Consistency: Medium viscosity lotion.

Suggested Packaging: Squeeze or pump bottle.

Comments:

VEEGUM PRO effectively thickens and stabilizes the lotion, even at elevated temperatures. This lotion is absorbed rapidly, leaving the skin smooth and greaseless.

SOURCE: R.T. Vanderbilt Co., Inc.: Formula No. 417

ALL PURPOSE LOTION (NON-OILY)

INGREDIENTS	% By Weight
Part A:	
CUTINA E-24	4.00
CUTINA GMS	6.00
LANETTE O	1.50
CETIOL LC	8.00
Part B:	
Glycerine	5.00
Deionized Water	74.00
Part C:	
Germaben II	1.00
Fragrance	0.10
Comments:	

The use of CUTINA E-24 allows the formation of nonionic emulsions that are non-whitening when compared to anionic systems, in addition to being very mild to the skin. As a nonionic, it allows the incorporation of a myriad of additives regardless of ionic species. Furthermore, this can be accomplished at virtually all feasible (cosmetically) pHs.

SOURCE: Henkel: Formula H-4880

ENRICHED MOISTURIZING LOTION (BEFORE & AFTER TANNING)

RAW MATERIALS	% By Weight
Sesame Oil U.S.P.	15.0
POLYSYNLANE	20.0
Glyceryl Monostearate	3.0
Isopropyl Myristate	10.0
Carbopol 934	0.2

A VEEGUM	1.3
Water	55.7
Magnesium Sulphate	0.5
B Mineral Oil, Light	9.0
POLYSYNLANE	10.0
Nimlesterol D	7.5
Amerchol L101	9.0
70% Sorbitol Solution	5.0
Witcamide 511	2.0
Preservative	q.s.

Procedure:

Add the Veegum to the water slowly, agitating continually until smooth. Add the magnesium sulphate and mix until smooth. Blend B well and add A to B; mix until smooth and uniform.

Packaging:

This formula is a rich, pourable or pumpable lotion and may be dispensed from a suitable glass or plastic bottle.

Comments:

This formula is an elegant, economical, and easily prepared water-in-oil lotion for softening and moisturizing dry skin.

The use of Veegum as an emulsion stabilizer allows a relatively large internal phase without sacrificing product stability. The amount of Veegum used controls the viscosity. In addition, Veegum contributes to the rich, nongreasy feel imparted by the highly emollient oil phase. The high water increased economy over typical water-in-oil products.

This formula would make an elegant addition to a treatment line as a super moisturizer for dry skin.

FACIAL BEAUTY LOTION

RAW MATERIALS	% By Weight
Oil Phase:	
PROMULGEN D	4.5
AMERCHOL L-101	5.0
OHLAN	0.5
ACETULAN	2.0
Cetyl Palmitate	1.0
Water Phase:	
Water	87.0
Perfume and Preservative	q.s.

Procedure:

Heat both phases to 80C. Add water phase to oil phase at 80C and continue to mix until 40C. Add perfume at 40C. Continue to mix until room temperature.

Description:

A heavy viscosity, flowing lotion for daily facial use. The w/o emulsifies AMERCHOL L-101 and OHLAN, in combination with the nonionic o/w emulsifier PROMULGEN D, gives this lotion excellent stability. An elegant, nongreasy, velvety feel is attributable to ACETULAN.

SOURCE: Amerchol Corp.: AMERCHOL: Formula T53-192-1

PROTECTIVE BARRIER LOTION

RAW MATERIALS	% By Weight
Oil Phase:	
GLUCAM E-20 Distearate	1.0
GLUCATE SS	0.5
AMERLATE P	1.5
Stearic Acid, xxx	10.0
Dimethicone	5.0
Water Phase:	
Deionized Water	76.0
Glycerin	5.0
Triethanolamine (99%)	1.0
Perfume and Preservative	q.s.

Procedure:

Heat both phases to 80C. Add water to oil at 80C. Add perfume at 40C. Continue to mix with moderate agitation while cooling to room temperature.

Description:

Light, fluffy, pearlescent lotion. The combination of GLUCAM E-20 Distearate and AMERLATE P provides emolliency and lubricity. GLUCATE SS enhances high temperature stability. This quick-vanishing lotion leaves a nontacky, nongreasy, highly protective barrier. Recommended for use during work, sports and hobby activities.

SOURCE: Amerchol Corp.: GLUCAM E-20: Formula T49-198-2

FACIAL LOTION

INGREDIENTS	% By Weight
Part A:	
Water, deionized	85.20
Mineral oil	6.00
GLUCAM E-20 methyl gluceth 20	1.00
KELTROL T xanthan gum	0.20
Part B:	
EMEREST 2400 glyceryl stearate	2.80
NEO-FAT 18-55 stearic acid	2.00
CETAL cetyl alcohol	1.80
Triethanolamine (TEA)	1.00
Fragrance	to suit

Procedure:

Part A:

1. Slurry KELTROL T in mineral oil.
2. Add slurry to other Part A ingredients using a Lightnin'-type mixer with good agitation. Heat to 82C (180F).

Part B:

1. In another container, combine Part B ingredients (except triethanolamine and fragrance) and heat to 82C (180F).
2. Add Part A to Part B.
3. Allow to cool to 49C (120F), then add triethanolamine.
4. Continue mixing until cooled to 27C (80F).
5. Add fragrance.
6. Package.

The addition of KELTROL T xanthan gum ensures emulsion stability and also provides a rich, smooth skinfeel.

FACE LOTION

RAW MATERIALS	% By Weight
Allantoin	0.3
Water	88.0
SOFTIGEN 767	3.0
Hydroviton	2.0
Extrapone Hamamelis Extract Colorless Special	2.0
Ethanol 96%	5.0
Perfume	q.s.

Preparation:

Allantoin is dissolved in water, and the other ingredients are added.

SOURCE: Huls America Inc.: Formula 1.5.8

HAIR CONDITIONER LOTION

RAW MATERIALS	% By Weight
Oil Phase:	
PROMULGEN D	3.5
Cyclomethicone	1.0
Stearamidopropyl Dimethylamine	0.8
Dicetyldimonium Chloride (68% active)	2.0
Water Phase:	
Water	91.7
GLUCAM E-10	1.0
Citric Acid	q.s.
Perfume and Preservative	q.s.

Procedure:

Heat both phases to 75C. Add water phase to oil phase at 75C with agitation. Cool while mixing to 45C. Adjust pH to 4-5, add perfume and continue to mix while cooling to 35C.

This opaque conditioner derives its smooth appearance, good consistency and opacity from PROMULGEN D. It also imparts a creamy texture and contributes to the characteristic feel of properly conditioned hair. The GLUCAM E-10 imparts gloss, improves wet and dry combing and enhances conditioning by ensuring a smooth, even spread of the quaternaries.

HAND LOTION

RAW MATERIALS	% By Weight
Oil Phase:	
Mineral Oil	2.40
Isopropyl Myristate	2.40
Stearic Acid	2.90
"Nimcolan" T	0.50
Cetyl Alcohol	0.40
Glycerol Monostearate	1.00
Water Phase:	
Triethanolamine, 99%	0.94
Propylene Glycol	4.80
POLYOX WSR-205	0.75
Water, preservatives, fragrance	q.s.

Preparation Procedure:

1. Dissolve the POLYOX WSR-205 using the available water.
2. Then add the triethanolamine and propylene glycol.
3. Heat the water phase to 70C.
4. Heat the oil phase to 70C.
5. Add the water phase to the oil phase while stirring vigorously.
6. Add the preservatives and fragrance when the mix reaches the appropriate temperature.
7. Continue stirring until the temperature reaches 30-35C.

The smooth, silky feel that the POLYOX Resins impart to the skin is evident when the resins are incorporated into creams and lotions. These aesthetic properties provide a formulation with a perceptible difference that improves the appeal of the product.

HAND AND BODY LOTION

RAW MATERIALS	% By Weight
Part 1:	
Water	78.6
Carbomer 934	.2
Part 2:	
Modulan	1.6
IPP	3.8
Amerchol L-101	.8
GMS SE	2.1
Rosswax 63-0412	4.0
IPM	4.0
Jojoba Oil	1.6
Part 3:	
Germaben IIE	1.0
Part 4:	
Fragrance	q.s.
Part 5:	
Triethanolamine	2.3

Procedure:

Part A:

Disperse the Carbomer 934 in the water phase in a stainless steel kettle.

Part B:

In a separate heated kettle, heat the oil phase until all ingredients are melted. When everything is melted add the oil phase to the water phase. When everything is blended add the preservative, the fragrance and the Triethanolamine with increased agitation. Cool to room temperature and package.

SOFT & SILKY LOTION

RAW MATERIALS	% By Weight
Part (A):	
Rosswax 63-0412	1.6
Rosswax 1641	1.2
Rosswax 63-0212	1.0
GMS-SE	2.1

CONDITIONING/STYLING LOTION

RAW MATERIALS	% By Weight
Water	Q.S.
PVP K-90 (20% aqueous solution)	5.0
MONATERIC 1202	4.5
Hydrolyzed Animal Protein (50%)	0.5
SD-3A Alcohol	25.0
Propellant (optional)	5.0-25.0

Appearance: Clear Liquid

Nominal Activity: 3.0%

This formulation imparts both conditioning and controlled setting properties. As an aerosol mousse or a pump-on soft setting lotion the formulation can be spot applied, used as an after shampoo conditioner, or as a between shampoo revitalizing conditioner.

SOURCE: Mona Industries Inc.: MONATERIC 1202: Formulation

HYDROCORTISONE LOTION

INGREDIENTS % By Weight

Part A:

Arlacel 165 glyceryl stearate and PEG 100 stearate	4.0
Promulgen G stearyl alcohol and ceteareth-20	3.0
Amerchol CAB petroleum and lanolin alcohol	2.0
Myrj 52 PEG-40 stearate	1.5
Hydrocortisone acetate	0.5

Part B:

Water, deionized	82.4
Neo-Fat 18-55 stearic acid	4.0
Glucam E-20 methyl gluceth-20	2.0
KELTROL T xanthan gum	0.4
Preservative	0.2

Procedure:

1. Hydrate Keltrol T in the deionized water for at least 15 minutes using a Lightnin' type mixer.
2. Add the rest of Part B ingredients and heat to 71C (160F) while mixing.
3. In another container, blend and melt at 71C (160F) the Part A ingredients except the hydrocortisone acetate.
4. Add Part A to Part B while continuing to mix.
5. When fully mixed, add the hydrocortisone acetate and mix until cool.

The addition of KELTROL T xanthan gum stabilizes this anti-itch lotion and suspends the active ingredient, hydrocortisone acetate. KELTROL T also provides improved skin feel on application.

LIGHT CONDITIONING HAND LOTION

RAW MATERIALS	% By Weight
Water Phase:	
Glucquat 100	1.0
Deionized water	84.0
Oil Phase:	
GLUCATE SS	0.8
GLUCAMATE SSE-20	1.2
ACETULAN	2.0
PROMULGEN D	3.0
Glyceryl Monostearate (neutral)	0.5
Mineral oil, 70 vis.	7.5
Perfume and preservative	q.s.

Procedure:

Dissolve GLUCQUAT 100 in deionized water, and heat to 70C. Combine oil phase ingredients, and heat to 70C with propeller agitation. Slowly add water phase to oil phase, and mix until uniform. Cool to room temperature with mixing.

Description:

Flowable lotion with a light, emollient feel. GLUCQUAT 100 provides moisturizing and conditioning properties to the skin. ACETULAN reduces greasiness associated with the mineral oil. Excellent stability is due to the primary nonionic emulsifier package of GLUCATE SS (w/o) and GLUCAMATE SSE-20 (o/w) and the auxiliary emulsifier, PROMULGEN D (o/w).

SOURCE: Amerchol Corp.: GLUCQUAT 100: Formula T62-101-2

MOISTURIZING LOTION

RAW MATERIALS	% By Weight
Water Phase:	
KYTAMER PC	1.0
GLUCAMATE SSE-20	1.5
Deionized Water	82.0
Oil Phase:	
GLUCATE SS	1.5
PROMULGEN G	4.0
Mineral Oil	10.0
Perfume and Preservative	q.s.

Description:

Soft, white, glossy lotion. Contains KYTAMER PC, a substantive humectant which contributes to the lasting moisturization of the skin. The mild, nonionic emulsifying pair of GLUCAMATE SSE-20 (o/w) and GLUCATE SS (w/o) gives the lotion long-term stability. PROMULGEN G serves as an auxiliary emulsifier to this o/w lotion.

Procedure:

Disperse KYTAMER PC in water at room temperature with high speed agitation. When completely dispersed heat to 75C with continuous mixing until clear and uniform. Maintain temperature at 75C and add GLUCAMATE SSE-20. Heat oil phase to 75C. Add the water phase to 75C to oil phase at 75C with good agitation. Continue mixing while slowly cooling to room temperature. Add perfume below 50C.

SOURCE: Amerchol Corp.: KYTAMER PC: Formula T57-130-1

LIGHT MOISTURIZING LOTION

RAW MATERIALS	Sequence	% By Weight
Water	1	69.80
Triethanolamine 99%	1	0.20

Triethanolamine (99%)	0.35
E) Fragrance, #891118--Modern Floral Bouquet	0.15
F) GlycoCer HA	5.00

Procedure:

1. Combine Phase A ingredients. Mix well using propeller agitation to disperse powders.
2. Combine Phase B and mix to disperse.
3. Add Phase B to Phase C and mix well until paraben dissolves. (Note *)
4. Add A to BC and mix for 30 minutes or until smooth dispersion is formed. Then add Phase D and mix well until lotion is smooth and opaque.
5. Add Phase E and then Phase F and mix until homogeneous.

* Note: This is a cold process emulsion. However, it may be necessary to heat Phase BC slightly to hasten dissolution of Methylparaben. If so, either heat Phase A to the same temperature as Phase BC or cool Phase BC to room temperature before combining the two phases.

MOISTURIZING CLEANSING LOTION

INGREDIENT	% By Weight
A. Triple Pressed Stearic Acid	4.5
Mineral Oil	2.5
Cetylstearyl Alcohol	1.0
Squalane	1.0
B. Polysorbate	1.0
Triethanolamine (85%)	0.85
Ethoxylated Lanolin	1.5
Sodium Hydroxide (50%)	0.1
Methylparaben	0.0375
Imidazolidinyl Urea	0.0375
Glycerol	1.0
Distilled Water	81.375
C. GlycoCer.HA or GlycoCer.HALA	5.0
D. Perfume, qs	0.1

Procedure:

1. Gentle heat in separate vessels to 80 degrees C.
2. Add A to B under agitation avoiding incorporation of air.
3. Cool to 40 degrees C. under agitation and ambient conditions.
4. Add C and D and continue agitation to about 35 degrees C.
5. Homogenize and fill into containers.

A lotion capable in cleansing the skin of make-up while moisturizing.

MOISTURIZING LOTION

RAW MATERIALS	% By Weight
Oil Phase:	
PROMULGEN D	5.0
Mineral oil	4.0
CETAL	2.0
AMEROXOL OE-2	1.0
GLUCAMATE SSE-20	2.0
Dimethicone	1.0
GLUCAM E-20 Distearate	1.0
Water Phase:	
GLUCATE SS	2.0
Deionized water	81.0
BIOCARE SA	1.0
Perfume and preservative	q.s.
Procedure:	

Heat the oil phase to 80C; heat water phase minus the BIOCARE SA to 80C. Add water to oil at 80C; add perfume and BIOCARE SA below 35C. Continue mixing with moderate agitation while cooling to room temperature.

Description:

A glossy nonionic lotion of medium consistency with wrinkle masking properties. BIOCARE SA, a "skin-activated" complex, lifts facial lines restoring a smoother surface and enhancing afterfeel. GLUCATE SS and GLUCAMATE SSE-20 act together to emulsify and stabilize the viscosity of this elegant lotion. AMEROXOL OE-2 and GLUCAM E-20 Distearate offer auxiliary emulsification and lubricity. PROMULGEN D imparts a good consistency and texture to the lotion.

SOURCE: Amerchol Corp.: BIOCARE SA: Formula T61-104-1

MOISTURIZING LOTION

RAW MATERIALS	% By Weight
Oil Phase:	
AMERLATE P	0.5
Stearic Acid	3.0
Glyceryl Stearate	2.0
Water Phase:	
GLUCAM E-20	5.0
Triethanolamine	1.0
Water	83.7
BIOCARE Polymer HA-24	3.8
Germaben IIE	1.0
Description:	

Medium viscosity, slightly translucent, moisturizing lotion with good lubricity and rich feel. BIOCARE Polymer HA-24 is a substantive molecular complex which greatly enhances the softening and lubricating properties of Hyaluronic Acid. AMERLATE P and GLUCAM E-20 function as oil soluble and water soluble emollients, respectively.

SOURCE: Amerchol Corp.: BIOCARE Polymer HA-24: Formula T56-26-3

MOISTURIZING LOTION: NORMAL TO OILY SKIN

INGREDIENTS	% By Weight
Part A:	
EUMULGIN B-1	0.75
LANETTE 16	0.2
CUTINA GMS	0.5
CETIOL LC	2.0
ARNICA OIL CLR	3.0
Stearic Acid XXX	0.75
Silicon SF 18 (350 CS)	0.50
Propylparaben	0.1
Part B:	
Glycerin	2.0
Triethanolamine	0.1
Methylparaben	0.2
Tetrasodium EDTA	0.05
Deionized Water	q.s. to 100
Part C:	
Carbopol 941 (2% Aq.)	4.0
Deionized Water	4.0
Part D:	
Fragrance	0.15

Procedure:

- 1) Heat Part A to 75-80C.
- 2) Heat Part B to 75-80C.
- 3) Stir Part A into Part B, using a homomixer. Homomix for five (5) minutes at temperature.
- 3a) Remove and use "lightning" type stirrer.
- 4) At 60C, stir in pre-mixed Part C.
- 5) Cool to 40-45C and stir in fragrance.
- 6) Cool to 25C and package.

Comments:

This moisturizing lotion contains Arnica Oil, a popular and well proven herbal remedy with properties generally beneficial to the skin.

"NON-OILY" HAND AND BODY LOTION

INGREDIENTS % By Weight

Part A:

Deionized water	84.0
Magnesium aluminum silicate, high viscosity	0.4
KELTROL T xanthan gum	0.3

Part B:

Mineral oil, light purified	3.0
NEO-FAT 18-55 stearic acid	2.5
CETAL cetyl alcohol	2.0
ACETULAN acetylated lanolin alcohol	1.2
SOLULAN PB-2, PPG-2 lanolin ether	1.0
TEGIN 515 glyceryl stearate	0.7
Silicone 200 fluid, dimethicone	0.4

Part C:

Glucam E-20 methyl gluceth 20	3.5
Triethanolamine (TEA)	1.0

Procedure:

1. Hydrate premixed KELTROL T and magnesium aluminum silicate in deionized water at 77C (170F) (10-15 minutes using a high shear mixer).
2. In another container, mix Part B ingredients and heat to 77C (170F) until melted.
3. Combine ingredients in Part C and heat to 77C (170F).
4. Combine A, B and C while maintaining temperature at 77C (170F).
5. Mix slowly while cooling until temperature reaches 38C (100F).
6. Add fragrance.
7. Package.

The addition of KELTROL T xanthan gum stabilizes this oil-in-water emulsion and improves skin feel of the lotion. Also, the pseudoplastic property conferred by KELTROL T allows ease of application.

Phase B:

In the main beaker, disperse B1 at 75C.

Add Glycerin.

Add Triethanolamine to neutralize the Carbopol gel.

Mix until a smooth gel is obtained.

Phase A:

Blend A1 and A2 together at 75-80C until homogeneous.

Add Phase A to Phase B with continuous mixing at 75-80C for fifteen minutes.

Cool batch to 60C and add Phase C.

Continue to cool with mixing to 37C then add Phase D, E, F, G in sequence.

Continue mixing while cooling batch to 25-28C.

Manufacturing Procedure:

1. In a separate kettle, mix the Sequence 1 ingredients and heat to 78C under Lightnin' mixer agitation.
2. In the main kettle, combine Sequence 2 ingredients. Heat to 75C under Lightnin' mixer agitation.
3. Combine Sequence 3 ingredients in an auxiliary vessel and mix until homogeneous. Add combined Sequence 3 to Sequence 2.
4. When Sequence 1 and combined Sequence 2 and 3 reach proper temperature, slowly add Sequence 1 (oil phase) at 78C into combined Sequence 2 and 3 (aqueous phase) at 75C under Lightnin' mixer agitation.
5. Mix for 15 minutes or until emulsion is complete. Begin cooling to 65C. At 65C, switch to side-wiping agitation.
6. Continue cooling with side-wiping agitation to 42C.
7. Add Sequence 4. When completely mixed, cool to 25-30C.
8. At 25-30C, add Sequence 5. Mix. Add Sequence 6 when product is homogeneous, package.

PHOSPHOLIPID EFA REMEDIAL SKINCARE LOTION

RAW MATERIALS	% By Weight
Part A.	
PHOSPHOLIPID EFA	3.20
Water	3.20
MONATERIC 1188M	1.60
Part B.	
0.5% Carbopol 941	67.80
Glycerin	5.00
Methyl Paraben	0.10
Part C.	
Isopropyl Myristate	6.00
Cetyl Palmitate	3.00
Myristyl Myristate	4.00
Isocetyl Stearate	3.00
Stearyl Stearate	2.00
Dow Fluid 200/100 cs.	1.00
Propyl Paraben	0.10

Procedure:

Preblend phases A and B, then combine and heat with stirring to 55C. Blend phase C with heat to 55C and combine the first two phases using sufficient homogenization to ensure good emulsification. Stir cool to 45C, add fragrance, and package.

Comments:

The synergistic emulsifying properties of Phospholipid EFA and Carbopol resins allows for a very mild product free of any additional nonionic surfactants, thereby reducing the need for excess preservatives. The high emollient phase provides a coherent barrier for water retention in the skin while the PHOSPHOLIPID EFA delivers a substantive, luxurious afterfeel.

POURABLE MOISTURIZING LOTION

RAW MATERIALS % By Weight

Part A.

Monaquat P-TS (as is)	2.0
Germaben II	0.2
Glycerol (99%)	3.0
PEG 12	2.0
Deionized Water	84.1

Part B.

Carnation Mineral Oil	3.0
Isopropyl Isostearate	2.0
Cetyl Alcohol	2.0
Dow Corning 200 Silicone (100 C.S.)	0.2
Propylene Glycol Monostearate (Pure)	1.5

Procedure:

1. Melt Monaquat P-TS at 45C in closed container (to avoid loss of alcohol). Charge Part A ingredients and heat to 60C in a stainless steel or glass lined vessel fitted with a suitable stirrer and a stainless steel propeller and mix until clear and uniform.
2. Heat part B to 62-65C with mixing to ensure uniformity. Add slowly to part A with good mixing.
3. After 5 minutes remove heat and cool slowly (0.5 to 1.0C per minute).
4. When the temperature drops to the 45-40C range the product will thicken somewhat and the propeller rotational speed will slow down. Increase the speed to ensure thorough mixing.
5. Cool to 27C or below.

Formula F-255, when made according to the above procedures will withstand at least 5 freeze/thaw cycles and will exhibit no oil or bottom water separation at 50C for at least 3 months.

POURABLE MOISTURIZING LOTION

RAW MATERIALS	% By Weight
Part I:	
Deionized Water	84.3
MONAQUAT P-TS	2.0
Glycerin (99%)	3.0
PEG 12	2.0
Part II:	
Light Mineral Oil	3.0
Isopropyl Isostearate	2.0
Cetyl Alcohol (95%)	2.0
Dimethicone (100 C.S.)	0.2
Propylene Glycol Monostearate (Pure)	1.5

Procedure:

Heat Part I to 65C, with mixing, until clear. Heat Part II to 65C, with mixing. Slowly add Part II to Part I with efficient mixing. Remove heat after 5 minutes. Cool slowly. When the temperature drops to the 45-40C range the product will thicken somewhat and the propeller rotational speed will slow down. Increase the speed to ensure thorough mixing. Add fragrance, coloring or preservative as required. Cool to 27C or below and fill.

This formula, when made according to above procedures, will withstand multiple freeze/thaw cycles, remains stable at 50C for at least 3 months and maintains at least 1-year stability at room temperature.

This light-bodied pourable moisturizing lotion provides excellent lubricity when applied and worked into skin. The after-feel is smooth and silky. Skin is left moisturized without feeling oily. MONAQUAT P-TS provides primary emulsification and skin conditioning.

SERUM CONTOUR LOTION

RAW MATERIALS	Sequence	% By Weight
Gingko Biloba Phytosome	1	0.50
Unicide U-13	1	0.25
Deionized Water	1	59.40
Carbopol 934 (2% Disp'n)	1	12.50
Propylene Glycol	1	3.50
Methylparaben	1	0.10
Allantoin	1	0.10
Panthenol	1	0.10
Britol 7	2	10.00
Lipomulse 165	2	6.00
Lipopeg 39-S	2	2.50
Lipopeg 2-DL	2	1.00
Lipocol L-23	2	1.00
Lipolan R	2	1.00
Propylparaben	2	0.05
Lipocol C	2	0.40
Triethanolamine 99%	3	0.40
Deionized Water	3	0.40
Monawet MO-70R	4	0.50
Butchers Broom 5:1 PG	5	0.50
Ground Ivy Glycolic 5:1 PG	5	0.10
Horse Chestnut 5:1 PG	5	0.10

Procedure:

1. In main kettle, combine Sequence 1 ingredients and heat to 75C under homomixing until all powders are dissolved.
2. In side kettle, combine Sequence 2 ingredients and heat to 80C.
3. At proper temperatures, add Sequence 2 to Sequence 1 under homomixing and continue to homogenize for a minimum of five minutes at temperature.
4. Switch to sweep mixing and begin cooling.
5. At 70C, add premixed Sequence 3 to batch. Continue cooling.
6. Slowly add Sequence 4 to batch. Continue cooling.
7. At 30C, add premixed Sequence 5 to batch and continue cooling to 25C.

SUPER MOISTURIZING LOTION

INGREDIENT	% By Weight
A VEEGUM	1.0
RHODIGEL	0.5
Deionized Water	74.5
B Sodium PCA (Ajidew N-50)	3.0
Glycerine	5.0
C Hydrogenated Polyisobutene (Polysynlane)	4.0
Mineral Oil (and) Lanolin Alcohol (Amerchol L-101)	3.0
Cetyl Alcohol	2.0
Isopropyl Myristate	2.0
Sorbitan Palmitate	1.2
Polysorbate 40	3.8
D Citric Acid to pH 5.5	q.s.
Preservative, Dye, Fragrance	q.s.

Preparation:

Dry blend VEEGUM and RHODIGEL and add to the water, mixing with maximum available shear until smooth and uniform. Add B ingredients and mix until dissolved. Add C ingredients and heat to 50C until a uniform clear mixture is obtained. Add C to (A + B) with high speed mixing. Avoid incorporating air. Cool with continuous stirring to 30C and add D.
 Consistency: Medium Viscosity Lotion (Viscosity - 1900-2400 cps)
 Suggested Packaging: Plastic squeeze bottle or pump.

Features:

This silky-feeling emulsion is stabilized and thickened using a synergistic combination of VEEGUM Magnesium Aluminum Silicate and RHODIGEL Xanthan Gum. It also contains the sodium salt of pyrrolidone carboxylic acid as a natural moisturizing factor along with the well known humectant, glycerine. This lotion spreads easily and is quickly absorbed leaving the skin moist and supple.

TONIC LOTION

RAW MATERIALS	Parts
A. Deionized water	852
Glycerin	20
Tensami 10/06 (A.M.I.)	40
Saponaria extract	30
Passion flower extract	30
2 Bromo-Nitropropane 1,3-Diol	10
Methylparaben	10
B. Tween 20	6
Perfume Passion Flower HR 38643	1.5
C. Red dye E124 in water solution at 1%	0.5

Operating Method:

Weigh the ingredients of the A phase and mix slowly.

Then add the B phase and the C phase under gently shaking.

SOURCE: TRI-K Industries, Inc.: Formula

HAND AND BODY LOTION

RAW MATERIALS	% By Weight
A VEEGUM PRO	2.00
Water	70.75
Glycerin	6.00
B Marcol 130	10.00
Petrolatum	4.00
Arlacel 165	5.00
Synchrowax AW1-C	1.25
C Allantoin	1.00
Preservative	q.s.

Procedure:

Heat the water to 70 to 75C, then slowly add the VEEGUM PRO while agitating at maximum available shear. Mix until smooth. Add glycerine and mix until uniform. Heat B to 75 to 80C. Add B to A and mix until cool. Add C and mix until uniform.

Consistency: Medium viscosity lotion.

Suggested Packaging: Squeeze or pump bottle.

Comments: VEEGUM PRO effectively thickens and stabilizes the emulsion even at elevated temperatures. Glycerin helps to rapidly hydrate dry skin and the selection of oils and waxes produces a smooth and non-greasy feel. The allantoin provides soothing relief for wounds, burns, and skin problems.

SOURCE: R.T. Vanderbilt Co., Inc.: Formula No. 420

ULTRA MOISTURIZING LOTION

INGREDIENT	% By Weight
A VEEGUM Ultra	0.15
Carbomer 980	0.15
Deionized Water	73.70
B Glycerin	5.00
C Mineral Oil (and) Lanolin Alcohol (Amerchol L-101)	4.00
Cetyl Alcohol	2.00
Isopropyl Palmitate	2.00
Hydrogenated Polyisobutene (Polysynlane)	5.00
Isopropyl Myristate	3.00
Sorbitan Palmitate	1.20
Polysorbate 40	3.80
D Preservative, Fragrance	q.s.
Triethanolamine to pH 6.0	q.s.

Procedure:

Dry blend VEEGUM Ultra and Carbomer and add them slowly to the water while stirring with a propeller mixer at 700 rpm. Increase the mixer speed to 1500-1700 rpm and continue mixing for 30 minutes. Add B and mix 5 minutes. Mix C ingredients and heat to 50C. Heat A and B mixture to 50C. Add C to A and B and mix at 50C and 1500-1700 rpm for 10 minutes. Slow the mixer to 1000 rpm while cooling to 30C. Add D and mix until uniform.

Product Characteristics: Viscosity: 2200-2800 cps
 pH: 6.0+-0.2
 Color: White, Bright

Features:

This creamy oil-in-water emulsion is thickened and stabilized with a combination of VEEGUM Ultra and Carbomer. The well known humectant glycerin provides the moisturizing function. VEEGUM Ultra also enhances the whiteness and brightness of the emulsion and helps adjust the pH to approximate that of the skin. The lotion spreads easily and is rapidly absorbed leaving the skin moist and supple.

ANTI-DANDRUFF SHAMPOO

INGREDIENTS	% By Weight
Part A:	
Water, deionized	61.3
KELTROL T xanthan gum	0.5
Color	to suit
Part B:	
Stepanol WAT TEA lauryl sulfate	25.0
Maprosyl 30 sodium lauryl sarcosinate	10.0
Zinc Omadine zinc pyrithione, 48% dispersion	3.0
Methyl Parasept methylparaben	0.2
Perfume	to suit

Procedure:

Part A:

1. Hydrate KELTROL T in the water thoroughly. Mix for at least 10 minutes at moderate to high shear using a Lightnin'-type mixer.
2. Add the color and continue mixing.

Part B:

3. In a separate container, mix ingredients slowly to avoid bubble formation.
4. Add Part B to Part A while mixing slowly.

In this anti-dandruff shampoo, KELTROL T xanthan gum provides suspension stability to the active ingredient, zinc pyrithione.

ANTI-DANDRUFF SHAMPOO

RAW MATERIALS	% By Weight
Water	41.0
TEA-Lauryl Sulfate (40%)	30.0
MONATERIC CAB	17.0
MONAMID 716	3.0
MONAMID 150-ADY	3.0
Zinc Pyrithione (48% Aqueous Dispersion)	4.0
Glycol Distearate	2.0

Procedure:

Add ingredients in order listed. Mix and heat to 60C. Cool, adjust pH to 6.0. Add coloring, fragrance and preservative as required.

Appearance: Off white, opaque liquid

Viscosity: Approximately 2000 cps.

SOURCE: Mona Industries, Inc.: MONAMID 716: Formulation

ANTI-DANDRUFF SHAMPOO

RAW MATERIALS	% By Weight
EMPICOL LZV	20.0
EMPILAN EGMS	5.0
EMPILAN LDE	5.0
EMPICRYL APD/B	1.0
Selenium disulphide	5.5
Citric acid	to pH 4.0-5.5
Perfume, dye, preservative	qs
Water	Balance
Formula MAS1	

ANTI-DANDRUFF SHAMPOO

RAW MATERIALS	% By Weight
EMPICOL LZV	18.0
EMPILAN EGMS	5.0
EMPILAN LDE	5.0
LAPONITE XLS (8% soln)	6.0
Selenium disulphide	5.5
Citric acid	to pH 4.0-4.5
Perfume, dye, preservative	qs
Water	Balance
Formula MAS2	

The water should be heated to approximately 80C and the EMPICOL LZV, EMPILAN LDE, EMPILAN EGMS and EMPICRYL APD/B or LAPONITE 8% aqueous solution added and stirred to give a uniform mixture. The selenium disulphide (45% suspension) should then be added and the product cooled to below 35C before adjustment of pH and addition of perfume, dye, etc.

Formulations MAS1 and MAS2 give high-viscosity lotions.

ANTI-DANDRUFF SHAMPOO

RAW MATERIALS	% By Weight
EMPICOL TL40/T	40.0
EMPILAN LDE	4.0
EMPICOL SEE	5.0
Citric acid	to pH 6.0-6.5
Ammonium chloride	qs (viscosity)
Perfume, dye, preservative	qs
Water	Balance
Formula MAS3	
Formulation MAS3 gives a clear liquid product.	

SOURCE: Albright & Wilson Americas: Formulas

ANTI-DANDRUFF SHAMPOO

RAW MATERIALS	% By Weight
EMPICOL ESB3	36.0
EMPILAN CDE	2.5
Zinc pyrithione (48% dispersion)	2.0
Carbopol 1342	1.0
Sodium chloride	qs (viscosity)
Citric acid	to pH 6.5-7.0
Perfume, dye, preservative	qs
Water	Balance

The Carbopol 1342 is thoroughly dispersed in water before addition of EMPICOL ESB3 and EMPILAN CDE. The zinc pyrithione is added followed by the perfume, dye, preservative, citric acid and finally the viscosity adjusted with sodium chloride.

Because of light sensitivity this product should be packed in an opaque bottle and because of zinc pyrithione, it is advisable that the label should carry instructions to shake before use.

Formula MAS4

MEDICATED SHAMPOO

RAW MATERIALS	% By Weight
EMPICOL ESB3	45.0
EMPILAN CDE	3.0
Irgasan DP300	0.5
Citric acid	to pH 6.5-7.0
Sodium chloride	qs
Perfume, dye, preservative	qs
Water	Balance

Formula MAS5

MAS5 is a general purpose medicated shampoo. The Irgasan should be pre-dissolved in the EMPILAN CDE before addition to the solution of EMPICOL ESB3 in water.

ANTI-DANDRUFF LOTION SHAMPOO

RAW MATERIALS	% By Weight
Part A:	
Veegum	1.0
Methocel FYM	0.8
Water qs to	100.0
Part B:	
Sodium Olefin Sulfonate (40%)	35.0
MACKAMIDE LLM	4.0
MACKAMIDE S	1.0
MACKPRO NLP	2.0
Part C:	
Zinc Omadine (48%)	4.0

Procedure:

1. Thoroughly disperse Veegum in water at 70 degrees C.
2. Then slowly add Methocel FYM and blend until homogenous.
3. Add Part B to Part A and adjust pH to 6.5 with citric acid.
4. Add Zinc Omadine and blend until homogenous.

ANTI-DANDRUFF SHAMPOO CREAM TYPE

RAW MATERIALS	% By Weight
Sodium Lauryl Sulfate (30%)	61.8
MACKAM 35HP	10.0
Sodium Chloride	7.0
Triple Pressed Stearic Acid	5.0
MACKAMIDE LLM	4.0
Propylene Glycol	4.0
Zinc Pyrithione (48%)	4.0
MACKAMIDE PK	2.0
Caustic Soda (50%)	1.6
MACKSTAT DM	qs
Water, Dye, Fragrance qs to	100.0

Procedure:

1. Heat stearic acid, MACKAMIDE LLM, MACKAMIDE PKM and propylene glycol to 70 degrees C.
2. Heat SLS, MACKAM 35HP, Sodium Chloride, Caustic Soda and water to 70 degrees C.
3. Add oil to water and cool to 55 degrees C.
4. Slowly add Zinc Pyrithione.
5. Cool to 45 degrees C. and add remaining components.
6. Fill at 40 degrees C.

SOURCE: McIntyre Group Ltd.: Personal Care Formulary: Formulas

2 IN 1 ANTIDANDRUFF SHAMPOO WITH Z.P.

RAW MATERIALS	% By Weight
1. Ammonium Lauryl Sulfate	64.00
2. Mackalene 426	10.00
3. Mackanate DC30	4.00
4. Ethylene Glycol Distearate	2.00
5. Mackamide C	1.00
6. Zinc Pyrithione 50% Suspension	2.00
7. 2% water solution of Hydroxyethyl Cellulose	9.00
8. 5% Dispersion of Magnesium Aluminum Silicate	9.00
9. Mackernium 007	0.50
10. Mackstat DM	QS
11. Fragrance	QS
12. Color	QS
13. Deionized Water qs to	100.00

pH: 5.5-6.0

Viscosity: 4000-5500 cps

Procedure:

1. Into a stainless steel tank place #1, #2, #3, #4 and start heating and slow mixing and heat to 80C (176F).
2. In a separate small stainless vessel, blend #6, and #5 and mix until a smooth uniform paste is formed. Do not add.
3. In a separate container prepare the 2% solution of #7 and mix till solution is completely clear.
4. In another container prepare a 5% suspension of #8 and blend well until the material has formed a completely smooth dispersion free of any particles.
5. Finally blend both, suspension #8 and solution #7, together and then add this blend to the hot batch with good mixing and continue agitation and keep temperature at 70C (160F).
6. Once this addition is completed, start addition of blend of #6 in #5 slowly. Keep mixing for 10 minutes then start slow cooling while mixing at 50C (120F) then adding #10.
7. Cool further to 35C (95F) while mixing and add #11, #12 and enough of #13 to compensate for evaporation.
8. Check pH and adjust with small amounts of diluted sodium hydroxide solution.

DO NOT ADD SALT to this preparation to increase viscosity. Try only small amounts of additional #5. Adding one half % of Lauryl Alcohol will help.

As color you could use very small amounts of FDC Blue #1 solution or FDC Green #3.

To prepare #8, McIntyre used Magnabrite HV made by American Colloid Co.

APRICOT SHOWER SHAMPOO GEL

INGREDIENTS	% By Weight
Sodium Lauryl Sulfate (30%)	25.10
Schercotaine APAB (40%)	12.6
Schercamox CAAG (35%)	3.8
Schercoquat APAS (90%)	0.6
Herbasol Extract Apricot	1.0
Preservative	0.2
Color, Fragrance	q.s.
Water (deionized)	56.7

Procedure:

1. Heat water to 50C. With stirring add Schercoquat APAS to dissolve.
2. Add Schercotaine APAB, mix.
3. Add Schercamox CAAG, mix.
4. Add preservative, mix.
5. Add Apricot Extract, mix.
6. Increase stirring and add Sodium Lauryl Sulfate. Mix thoroughly at high rpm until uniform.
7. To clear up bubble formation, warm finished product at 45-50C.

Formula 221-89

NATURAL MILD (APRICOT) CONDITIONING SHAMPOO

INGREDIENTS	% By Weight
Schercoquat APAS	0.5
Schercotaine APAB (40%)	6.0
Schercotaine CAB-G (45%)	14.0
Sipon ES-2 (27%)	18.0
Herbasol Extract Apricot	1.0
Schercomid SAP	1.0
Preservative	0.2
Water (deionized)	59.3
Color, Fragrance	q.s.

Procedure:

1. Heat water to 50C. With stirring add Schercoquat APAS to dissolve.
2. Add preservative, mix.
3. Add Schercotaine APAB & Schercotaine CAB-G. Heat & mix to 50C until uniform.
4. Add Schercomid SAP, mix.
5. Add Apricot Extract, mix.
6. Add Sipon ES-2. Mix thoroughly until uniform.

BASIC SHAMPOO

RAW MATERIALS	% By Weight
Triethanolamine Lauryl Sulfate (40%)	50.0
Lauramide DEA	2.0
CELLOSIZ HEC QP-4400H	1.5
Preservative, Color, Perfume	q.s.
Water	q.s.
Citric Acid	to pH 7.0-7.4

Procedure:

Add CELLOSIZ HEC QP-4400H to water at room temperature with rapid stirring. When well dispersed heat to 70C until a clear solution is obtained. When hydration is complete, add TEA Lauryl Sulfate and Lauramide DEA and mix until batch is clear and uniform. Adjust to pH 7.0 to 7.4 with Citric Acid. Cool to room temperature.

Description:

Simple system based on TEALS showing the compatibility and functionality of CELLOSIZ HEC.

SOURCE: Amerchol Corp.: CELLOSIZ HEC: Formula T55-117-1

CLEANSING SHAMPOO

RAW MATERIALS	% By Weight
AMERSIL DMC-357	2.5
GLUCAMATE DOE-120	2.0
Ammonium Lauryl Sulfate (28%)	35.7
Cocamidopropyl Betaine (35%)	10.0
Citric Acid (anhydrous)	0.4
Lauramide DEA	3.0
Deionized water	46.4
Preservative	q.s.

Procedure:

With propeller agitation mix deionized water and ammonium lauryl sulfate. Heat to 45C and add cocamidopropyl betaine, citric acid, lauramide DEA, AMERSIL DMC-357, GLUCAMATE DOE-120 and preservative, in that order, waiting for each ingredient to dissolve before adding the next. Cool to room temperature.

Description:

Basic cleansing shampoo for daily use. The AMERSIL DMC-357 improves foam quality and aids in combing. GLUCAMATE DOE-120 enhances viscosity.

CLEAR CONDITIONING SHAMPOO

INGREDIENTS	% By Weight
Standapol AEI	45.0
Standamox CAW	6.0
Nutrilan I	6.0
Dehyquart E	3.0
Fragrance	0.25
Kathon CG	0.05
Deionized Water	q.s. to 100
Citric Acid to pH 6-6.5	

Procedure:

Using moderate stirring at room temperature, add the Standapol AEI to the water. Then add, in order, remaining ingredients making sure the blend is clear after each addition. Adjust blend to pH 5.8-6.4 with citric acid and package.

Comments:

Dehyquart E is a special quaternary that improves the wet and dry combability without causing any loss in effectiveness of anionic surfactant systems. In addition, the Dehyquart E, unlike other conditioning polymers, does not lead to build-up with continued use.

GEL SHAMPOO

RAW MATERIALS	% By Weight
Sodium Lauryl Ether Sulfate 60%	24.00
MACKAM OB-30	14.50
MACKAMIDE LLM	4.00
Fragrance, Color, Deionized Water	Q.S.
Polysorbate 20	Q.S.
Propylene Glycol	Q.S.
MACKSTAT DM	Q.S.
Citric Acid (1% solution to desired pH level)	Q.S.

Procedure:

Blend together at 45 degrees C. with slow mixing to avoid aeration.

Properties:

pH: 6.1

Solids: 25.5

Viscosity: 15.000 cps

SOURCE: McIntyre Group Ltd.: Personal Care Formulary: Formulas

CONCENTRATED CONDITIONING CREME SHAMPOO

RAW MATERIALS	% By Weight
1. MACKADET CA	60.0
2. Stearic Acid Triple Pressed	7.5
3. MACKERNIUM 007	7.0
4. Sodium Hydroxide 20% Solution	5.0-5.5
5. MACKSTAT DM	q.s.
6. Deionized Water	q.s.
7. Fragrance	q.s.

pH: 7.2-7.8

Procedure:

1. Add #1 into stainless steel creme kettle and start mixing.
2. In separate container separately add #4 to 2/3 of #6 and mix together carefully avoid splashing-PROTECT EYES.
3. Add this solution to creme kettle and start heating to 180 degrees F. (82 degrees C.) with mixing, keep tank well covered.
4. After mixing for 20 min. start cooling, continuing mixing, and at 130 degrees F. (55 degrees C.) add #3 and remainder of #6, keep slowly mixing and cooling.
5. Take sample of warm mixture from tank and take pH reading of cooled sample.
6. Adjust batch if necessary by adding small quantities of solution of #4 to tank if pH is too low or a little diluted citric acid solution if pH is too high.
7. Finally add #5 to tank and then #7 mix for 15 min. and recheck pH and fill at 86 degrees F. (30 degrees C) into jars.

CONDITIONER SHAMPOO

RAW MATERIALS	% By Weight
Water and Preservative	32.95
MONATERIC 951A	50.00
MONATERIC LMAB	13.30
MONAQUAT P-TC	2.50
MONAMID 1007	1.25

Procedure:

Add ingredients in order above and blend. Adjust pH to level desired.

In this amphoteric/nonionic formula, MONATERIC 951A produces very high foaming without the need for an amphoteric surfactant. (SLS or AOS). Thus, the cationic conditioner, MONAQUAT P-TC, can deposit substantively on the hair without anionic interference. MONATERIC LMAB contributes additional conditioning and boosts viscosity.

SOURCE: Mona Industries, Inc.: MONATERIC 951A: Formula

NATURAL CONDITIONING SHAMPOO

RAW MATERIALS	% By Weight
Water	41.6
Sodium Chloride	0.4
Sodium Lauryl Sulfate (28%)	35.7
Phosphoric Acid (85%)	0.1
MONAMATE LNT-40	12.5
MONATERIC CAB	6.7
AVAMID 150	3.0

Procedure:

Add ingredients in the order listed with good agitation. Adjust pH to 6.0-7.0. Add preservative, color and perfume as required.

Formulation Properties:

Physical Appearance: Crystal clear liquid

Activity: 20%

Viscosity: 2800 cps

This formula provides deep cleansing but at the same time prevents excessive stripping of oil from the hair and scalp. It is thus designed to prevent dry hair and scalp conditions.

CONDITIONING SHAMPOO

RAW MATERIALS	% By Weight
Phase A:	
QUATRISOFT Polymer LM-200	0.5
Water	54.0
Phase B:	
GLUCAM E-20	3.0
SOLULAN 16	2.5
Phase C:	
Sodium Laureth-2 Sulfate (25% active)	35.0
Lauramide DEA	5.0
Citric Acid	q.s. to pH 7.0
Perfume and Preservative	q.s.

Procedure:

Add QUATRISOFT Polymer LM-200 to water with good mixing at room temperature. When thoroughly dispersed, begin heating to 45C until completely hydrated. Add GLUCAM E-20. When uniform add SOLULAN 16 and heat with moderate mixing to 45C. Avoid air entrapment. When clear and uniform add phase C. Mix until uniform. Adjust to pH 7.0 with citric acid.

Description:

Clear, medium viscosity, mild, conditioning shampoo. The cationic cellulosic QUATRISOFT Polymer LM-200 is substantive to hair and is uniformly deposited along the hair shaft to improve combing, manageability and overall appearance. QUATRISOFT Polymer LM-200 acts synergistically with Lauramide DEA to dramatically boost viscosity. The combination of GLUCAM E-20 and SOLULAN 16 conditions the hair and helps to maintain its moisture.

CONDITIONING NEUTRALIZING SHAMPOO

RAW MATERIALS	% By Weight
Part A:	
Deionized Water	60.6
TEALS	25.0
Disodium EDTA	0.3
Part B:	
INCROMIDE LR	3.0
INCROMIDE CAC	1.1
INCROMINE OXIDE BA	2.0
INCRODET TD-7C	6.0
Part C:	
HYDROTRITICUM 2000	0.5
CRODACEL QS	0.5
Geramaben II	1.0

Procedure:

Combine ingredients of Part A with mixing and heat to 65-70C. Add Part B ingredients individually with good mixing and cool to 45C. Add Part C with mixing and cool to desired fill temperature.

This formula contains a blend of Croda surfactants which yields a product with gentle cleansing and good foam characteristics. HYDROTRITICUM 2000 and CRODACEL QS provide good manageability to hair.

Formula SH-69-2

WHEAT SHAMPOO

RAW MATERIALS	% By Weight
Part A:	
Deionized Water	48.0
TEALS	30.0
INCROMINE OXIDE WG	5.0
INCRONAM WG-30	5.0
Part B:	
INCROMIDE CAC	10.0
Part C:	
HYDROTRITICUM 2000	1.0
Germaben II	1.0

Citric Acid to pH 6.5

Brookfield Viscosity: 1580 cps

Procedure:

Combine ingredients of Part A with mixing and heat to 60C. When clear, add Part B with mixing and cool to 40C. Add Part C with mixing and cool to desired fill temperature. Adjust pH with a 10% citric acid solution.

Croda's surfactants derived from wheat germ oil, INCROMINE OXIDE WG and INCRONAM WG-30, help build viscosity and foam in this formula. HYDROTRITICUM 2000, a protein from wheat, helps add conditioning and moisture retention.

DAILY USE CONDITIONING SHAMPOO FOR OILY HAIR

RAW MATERIALS	% By Weight
UCARE Polymer JR-400	0.5
SOLULAN 16	2.0
SOLULAN 98	1.0
Ammonium Lauryl Sulfate (28%)	60.0
Cocamidopropylamine Oxide (30%)	5.0
Citric Acid (40% Aq. Solution)	q.s. to pH 5-6
Deionized water	31.5
Perfume and preservative	q.s.

Procedure:

Disperse UCARE Polymer JR-400 in water at room temperature. When well dispersed, heat to 65C. When clear, add ammonium lauryl sulfate, cocamidopropylamine oxide and SOLULAN 98, in this order, mixing until clear and uniform after addition of each material. Separately, heat SOLULAN 16 to 50C to rest of formula, mix with stirring until clear. Cool to room temperature and adjust pH with citric acid solution to pH 5-6.

Description:

Clear, medium viscosity, daily conditioning shampoo. UCARE Polymer JR-400 conditions and mends split-ends due to frequent shampooing and blow drying. SOLULAN 16 and SOLULAN 98 provide added manageability and luster.

DAMAGED HAIR SHAMPOO

RAW MATERIALS	% By Weight
UCARE Polymer LR-400	0.40
UCARE Polymer LR-30M	0.40
GLUCAMATE SSE-20	3.00
Triethanolamine Lauryl Sulfate (40%)	17.50
Sodium Laureth Sulfate (28%)	17.86
Disodium Laurethsulfosuccinate (40%)	7.50
Lauramide DEA	2.00
Tetrasodium EDTA	0.10
Deionized water	51.24
Perfume and preservative	q.s.

Procedure:

Add UCARE Polymers to water at room temperature with good agitation. Once hydrated add the disodium laureth-sulfosuccinate. Begin heating and add TEALS and SLES. When at 60-65C, add the melted GLUCAMATE SSE-20 and lauramide DEA. Upon complete solution, cool to room temperature and add the tetrasodium EDTA.

Description:

Clear, medium viscosity shampoo. UCARE Polymer LR-400 and UCARE Polymer LR-30M are used in combination to get the desired viscosity and conditioning properties attributed to this formula. The substantive UCARE Polymers leave the hair soft and manageable. GLUCAMATE SSE-20 contributes to the mildness of the system, as well as the solubilization of the perfume oil.

BIO-INTENSIVE SHAMPOO

INGREDIENT	% By Weight
A:	
Deionized Water	38.65
Polyquaternium-10 (Polymer JR-125)	0.10
Sodium Laureth Sulfate (Sipon ES-2)	36.90
Lauramide DEA (Monamid 716)	1.70
VANSEAL NALS-30	8.80
LIPROPROTEL LCO	9.79
LIPACIDE UCO	1.70
Sodium Chloride	2.35
Citric Acid to pH 6	q.s.
B: Preservative, Fragrance	q.s.

Preparation:

Mix Polyquaternium-10 in available water until a clear uniform solution is obtained. Add the other ingredients in the order listed, mixing each until clear and uniform. Heating is not required.

Consistency: Pourable clear liquid (Viscosity-1400 to 1800 cps)

Features: This crystal clear shampoo features LIPACIDE UCO, which has been found effective against pityrosporomovale bacteria found in excessive amounts in the scalp of those suffering from dandruff and/or seborrhea. Hair conditioning properties. Excellent lathering characteristics.

EVERYDAY CONDITIONING SHAMPOO
(FOR HAIR'S EVERYDAY NEEDS)

RAW MATERIALS	% By Weight
Water	42.1
MONATERIC L-30	40.0
MONATERIC LMAB	13.3
MONATERIC 1203	3.3
MONAMID 1007	1.3

Procedure:

Add ingredients as listed (no heat required). Mix until uniform. Adjust pH to 6.5-7.5. Add preservative as required.

Formulation Properties:

Appearance: Clear viscous liquid
Nominal Activity: 18.5%

The above formula contains no polymers and therefore results in an everyday conditioning shampoo without build-up and oily feel. The gentle cleaning action produces clean, healthy-looking hair.

SOURCE: Mona Industries, Inc.: MONATERIC 1203: Formula

SELF ADJUSTING CONDITIONING SHAMPOO

RAW MATERIALS	% By Weight
Water	38.5
NaCl	1.0
MONATERIC 1202	7.5
MONAMID 1089	3.0
TEA-Lauryl Sulfate (40%)	50.0

Procedure:

Add ingredients in order listed.
Adjust pH to 6.0-7.0 with citric acid.
Add preservative as required.

Formulation Properties:

Appearance: Clear Liquid
Nominal Activity: 25.6%

This formulation blends the efficient cleaning of a high concentration of anionic tempered by the conditioning effects of MONATERIC 1202. The result is clean, shiny hair without the build-up or greasy feel usually associated with traditional conditioning agents. Additionally, the MONATERIC 1202 will selectively be more substantive at those sites on the hair where chemical or physical damage has occurred.

EVERY DAY SHAMPOO

INGREDIENTS	% By Weight
A Texapon K 14 S special	45,000
Lamepon S	5,000
Dehydol LS 3 deo	1,500
Perfume Oil	0,500
Cremogen Sage 739 016	0,500
Cremogen Camomile forte 728 790	0,100
Cremogen Melissa (Balm) 739 013	0,500
Cremogen Rosemary forte 758 302	0,100
B Demineralized Water	44,100
Phenonip	0,500
Polymer JR 400	0,200
Sodium chloride	2,000

Approx. 14% active surfactant

Manufacturing Process:

Part A: Mix all the ingredients.

Part B: Dissolve Phenonip in water, add Polymer while stirring and continue stirring until material is completely dispersed.

Add part B to part A and stir.

Final pH-value should be 6,5 and can be adjusted with the help of citric acid (aq. solution).

Remark: Without any colour dye:

the yellow-brownish colouring of the shampoo depends on the native colouring of the plant extracts.

Recommendation for colouring:

To receive a green colour add the following colour solution:
0,60% Sicomet Green Z 6120 (0,1% aq. solution/C.I. 19140 + 42051)

GEL SHAMPOO

RAW MATERIALS	% By Weight
Part A:	
INCROSUL OTS	20.00
INCRODET TD-7C	2.00
INCRONAM 30	5.00
INCROMEKTANT AQ	3.00
TEA Lauryl Sulfate	20.00
Deionized water	44.75
Part B:	
INCROMIDE LR	3.00
CROTHIX	1.25
Part C:	
Germaben II	1.00

Procedure:

Mix Part A and heat to 65C. Melt Crothix and add Incromide LR with mixing (Part B). Add Part B while still hot when Part A reaches 65C. Cool with mixing to 45C and add the Germaben II. Continue mixing and cooling to room temperature.

pH: 6.2

Viscosity: 120,000 cps

The combination of INCROSUL OTS, INCRODET TD-7C and INCRONAM 30 contributes mildness to this formula. INCROMEKTANT AQ helps prevent dryness of hair and INCROMIDE LR provides conditioning. CROTHIX imparts the gelling action.

Hamosyl L-30	10.0
TEA Lauryl Sulfate, 40%	25.0
Sodium Laureth (1) Sulfate, 25%	25.0
Cocoamidopropylamine Oxide, 30%	12.0
Hamp-ene Na ₂	0.2
Water, perfume, preservative	q.s.

Adjust to pH 5.0 with citric acid.

Premium lather richness is obtained from this formula.

ANTIDANDRUFF SHAMPOO FOR OILY HAIR

RAW MATERIALS	% By Weight
Hamosyl L-30	10.0
TEA Lauryl Sulfate, 40%	25.0
Zinc Pyrithione, 48%	4.2
Magnesium Aluminum Silicate	1.0
Hydroxypropylmethyl cellulose, E4000	1.25
Water, perfume, color (D&C Green #5)	q.s.

Disperse last two ingredients in hot water and allow to mix overnight. Add rest of ingredients.

Lathers richly even on oily hair. A creamy, flowable thick liquid.

RICH LATHER OILY HAIR SHAMPOO

RAW MATERIALS	% By Weight
Hamosyl L-30	25.0
Sodium Lauryl Sulfate, 38%	15.0
Sodium Laureth (1) Sulfate, 27%	15.0
Sodium Chloride	4.0
Cocamide NMEA	2.0
Hamp-ene Na ₂	0.2
Water, fragrance, preservative	q.s.

Heat to 70C and mix until cocamide MEA is dissolved. Adjust pH to 6-6.5, cool to 40C, add fragrance, and package.

A viscous shampoo which provides rich lather on oily hair with only one application, yet does not strip the hair. The sarcosinate surfactant provides the superior lathering in the presence of sebum while also serving to lightly condition the hair. Ideal as an oily hair formulation or as a single application shampoo, especially for salons.

HIGH FOAMING SHAMPOO

RAW MATERIALS	% By Weight
ALS	25.0
CROSULTAINE C-50	10.0
INCROMIDE CAC	5.0
Perfume	0.5
BHT	0.1
Disodium EDTA	0.1
Deionized Water	57.3
Germaben II	1.0
CROQUAT WKP	0.5
KERASOL	0.5

pH to 6.5 w/citric acid - 10%
 Viscosity 11,900 cps

Procedure:

Combine the Disodium EDTA and water and mix until uniform. Add the ALS, Crosultaine C-50 and Germaben II. Mix until uniform. Separately combine the Incromide CAC, perfume and BHT and mix until uniform (heat slightly, no more than 50C, if needed to dissolve the BHT). Add this mixture to the water and surfactants, blend with mixing and mix until uniform. Add the Croquat WKP and Kerasol and adjust the pH. Continue mixing until uniform.

This shampoo combines the high foaming and cleansing properties of ALS with the superior foam boosting aspect of CROSULTAINE C-50 to produce a rich high lather. The INCROMIDE CAC provides additional foam boosting, foam stabilizaton, and fragrance solubilization. Finally, the CROQUAT WKP and KERASOL provide conditioning and manageability for the hair without over-conditioning or buildup.

HIGH FOAMING 2 IN 1 SHAMPOO CONTAINING SELENIUM DISULFIDE

RAW MATERIALS	% By Weight
1. Ammonium Lauryl Sulfate 28%	60.00
2. Mackalene 426	9.30
3. Mackanate DC30	3.70
4. Ethylene Glycol Distearate	1.85
5. Mackamide S	1.50
6. Selenium Disulfide Powder	1.00
7. 5% solution of Hydroxyethyl Cellulose in water	10.00
8. 5% suspension of Magnesium Aluminum Silicate	10.00
9. Dry pure silica (Aerosil)	1.50
10. Lauryl Alcohol	0.50
11. Diethanolamine to pH of 5 to 6	QS
12. Mackstat DM	QS
13. Fragrance	QS
14. Color solution Blue *	QS

pH: 5.2-6.4

Viscosity: 5000-10000 cps

Procedure:

Into stainless steel mixing tank measure #1, #2, #3, #4. Start heating and slow mixing and heat to 70C (160F). In a separate stainless or glass container blend #6 and #5 at room temperature until a smooth uniform paste is formed which will eventually be added later on.

In another container prepare the 5% suspension #8 and mix the suspension till it is completely uniform and viscous and shows no undissolved particles. Preserve suspension if not used immediately with some #12.

In another container prepare the % solution of #7 using heat and mix well until a perfectly sparkling clear viscous solution results. Preserve if not used immediately with a little of #12.

When the temperature in the main mixing tank has reached 70C (160F) mix the suspension #8 and solution #7 together and heat to 70C (160F) and add to the main tank while continuously mixing well. Be sure that there are no undissolved particles in the #1, #2, #3, #4 before the addition of the suspension #8 and the solution #7. Add #10.

After everything is well blended together add slowly the blend of #6 and #5 to the main tank.

After the blending of all ingredients at the high temperature has proceeded well start sprinkling the very fine flakes of #3. At 50C (120F) add #12 and finally 13. Cool a sample out of the batch and check pH and if necessary add #11 to adjust.

As color a solution of DC Blue #12 seems to be stable.

HIGHLY CONCENTRATED DETANGLING SHAMPOO

RAW MATERIALS	% By Weight
1. MACKADET CA (Mild Blend)	81.50
2. Tetrasodium EDTA (40% Solution)	0.20
3. Glycerin	4.00
4. Hydrolyzed Animal Protein 55% Liquid	2.00
5. MACKERNIUM 007 (Polyquaternium 7)	7.00
6. Polysorbate 20	2.00
7. Fragrance	Q.S.
8. MACKSTAT DM (DMDM Hydantoin)	Q.S.
9. Diluted Hydrochloric Acid Solution 1:4	Q.S. to pH spec.
10. Color	Q.S.
11. Sodium Chloride to adjust viscosity	Q.S.
12. Deionized Water	Q.S. to 100.00

Procedure:

- In a stainless steel mixing kettle blend #1, #2, #3 with mixing. Then add #4 and #5. Slowly mix until all is dissolved, if necessary use a little heating.
- Adjust pH with the diluted Hydrochloric Acid solution (made by adding 1 part of acid carefully to 4 parts of water Protecting the Eyes and Face) until correct pH is obtained (6.5-7.0).
- Add color, if required, add #8 slowly and mix in.
- If the product is to be sold as concentrate then the quantity of #8 must be increased, fragrance and color also properly increased.
- If the product is sold diluted then 1 part of the above formula is mixed with 2 parts of deionized water the increased fragrance added then the preservative #8 added at the corrected amount the pH adjusted and finally the salt addition done to obtain the desired viscosity.

pH: 6.5-7.0

Viscosity larger than 1000 cps

MILD PROTEIN SHAMPOO

INGREDIENT	% By Weight
Demineralized Water	
Primal ICS	1.1500
Texapon SBN	22.0000
Velvetex AB 45	9.0000
Texapon ST 40	5.0000
Capilotonique #245 HS	1.0000
Gafquat 755 N	0.5000
Tri-Sept M	0.2000
Tri-Sept P	0.1000
Tristat Iuabiol	0.2000
Tween 20	1.5000
Perfume	0.5000
TEA 99%	0.5000
Certified Color	QS

Procedure:

1. In main tank, blend the Primal ICS in water as RT with prop agitation.
2. Pre blend the fragrance with Tween and set aside.
3. Add to main tank: Texapon(s), Velvetex, Capilotonique, Gafquat, Methylparaben, Propylparaben, and Tristat IU in order listed mixing well between each add'n.
4. Add Fragrance Blend and TEA.

Formula: Code AMI.020.

NATURAL SHAMPOO

INGREDIENT	% By Weight
Natural Shampoo Base AMI	88.7500
Guar C-261	0.7500
Lavender AMI	10.0000
Tri-Sept M	0.2000
Tri-Sept P	0.1000
Tristat IU	0.2000

Procedure:

1. Charge Panama Wood/Soapwort Extract to main tank.
2. Slowly add Cosmedia Guar to batch and mix until fully dissolved.
3. Add Parabens and Tristat IU to batch and mix until fully dissolved.
4. Add Lavender Extract to batch and mix until fully dissolved.

Formula: Code: AMI.019

Formula MS23	

Formulations containing EMPICOL MD do not readily respond to viscosity adjustment using sodium chloride. For those, Albright & Wilson recommends the use of Natrosol 250 HHR at a level of 0.25-0.5% as thickening agent. The Natrosol should be dissolved in the water prior to the addition of the surfactants and other additives.

MOISTURIZING SHAMPOO FOR OILY HAIR

RAW MATERIALS	% By Weight
Deionized Water	35.08
SLES	47.00
Germaben II	1.00
INCROMIDE LR	2.50
CROSULTAINE E-30	12.50
INCROMECTANT AQ	0.50
INCROMECTANT LQ	0.50
CROQUAT L	0.25
Citric Acid (10% Soln)	0.67

pH: 6.75

Viscosity: 1100 cps

Procedure:

Charge water into mixing kettle. Start mixing and heating to 65-70C. Add Germaben II and SLES. When the batch reaches 65-70C, add Incromide LR and Crosultaine E-30, one at a time, with agitation. When the batch is uniform and clear, start cooling. At 50C add Incromectants. At 40C add Croquat L. Continue mixing and cool to room temperature. Adjust pH with citric acid.

This formula combines CROSULTAINE E-30, INCROMIDE LR and SLES to provide a quality gentle cleanser. The INCROMECTANTS are incorporated to help maintain the moisture balance of hair while CROQUAT L provides light conditioning to hair.

MOUSSE SHAMPOO

INGREDIENTS	% By Weight
Part A:	
Water, deionized	63.21
KELTROL T xanthan gum	0.20
Methylparaben	0.20
Part B:	
Stepanol WAT, TEA lauryl sulfate	9.18
Bio Terge AS-40 sodium C14-C16 olefin sulfonate	9.18
Ninol 4821 lauramide DEA	4.59
Emid 6515 cocamide DEA	2.75
Merquat S polyquaternium 7	2.00
Amphosol CA cocamidopropyl betaine	1.38
Emerest 2400 glyceryl stearate	1.38
Tween 20 polysorbate 20	0.47
Neo-Fat 18-55 stearic acid	0.46
Fragrance	to suit
Part C:	
Propellant	5.00

Procedure:

Part A:

1. Using a Lightnin'-type mixer, hydrate KELTROL T in deionized water. Mix for 10-15 minutes.
2. When fully hydrated, add methylparaben and continue mixing.
3. Heat to 77C (170F) with continuous mixing.

Part B:

1. Mix Part B ingredients (except fragrance) in another container.
2. Heat to 77C (170F) with slow agitation until all ingredients are melted.
3. Blend Parts A and B together thoroughly with slow agitation.
4. Cool to 38C (100F) and add fragrance.

KELTROL T xanthan gum provides this mousse shampoo with shelf stability and rich, long-lasting lather.

CLEAR CONDITIONING SHAMPOO

RAW MATERIALS	% By Weight
GLUCQUAT 100	1.0
GLUCAMATE DOE-120	3.5
TEA-Lauryl Sulfate (40% active)	25.0
Lauramide DEA	5.0
Deionized water	65.0
Citric Acid	0.5
Perfume and preservative	q.s.

Procedure:

Heat deionized water to 60C with propeller agitation. Add TEA-lauryl sulfate, lauramide DEA, preservative, GLUCAMATE DOE-120 and citric acid to batch, in that order, waiting for each ingredient to dissolve before adding the next. When clear add GLUCQUAT 100. Cool to room temperature.

Description:

In this clear shampoo, GLUCQUAT 100 provides conditioning properties and shine to hair. GLUCAMATE DOE-120 works synergistically with lauramide DEA in the surfactant system to build viscosity.

NON-IRRITATING AND MILDLY CONDITIONING SHAMPOO

RAW MATERIALS	% By Weight
MONATERIC 985A	40.00
MONAMATE OPA-30	30.00
Cerasynt IP	2.00
Preservative	0.30
H3PO4 (85%)	0.75
Water	26.95

Procedure:

Mix MONATERIC 985A, MONAMATE OPA-30, water, Preservative and Cerasynt IP. Heat with stirring to completely melt the solid materials (approx. 60C). Add H3PO4. Cool with stirring. At 40C add any perfume or colors. Continue stirring and cooling to 25C. Adjust pH to 6.5-7.0.

Properties:

Appearance: Pearly viscous liquid
Nominal Activity: 26%

MONAMATE OPA-30 in this formulation imparts a high, dense foam which leaves hair mildly conditioned and especially shiny. This formulation without Cerasynt IP or preservative exhibited zero eye and skin irritation when tested at 10% active.

SOURCE: Mona Industries: MONAMATES: Formulation

NON-ALKALINE SHAMPOO HIGH VISCOSITY (25% active)

RAW MATERIALS	% By Weight
Water	13.1
Sipon L22	60.7
MONAMATE OPA-30	14.8
MONATERIC ISA-35	11.4

Mixing Procedure:

Add components in order listed with sufficient agitation and heat (about 50C). Adjust pH to desired level with phosphoric or citric acid. Viscosity at pH 6.5 is approximately 15,000 cps. and at pH 4.5-5.0; it is over 35,000 cps. Lower viscosities will result if lower amounts of MONATERIC ISA-35 are used.

PEARLESCENT LIQUID SHAMPOO

INGREDIENTS	% By Weight
Water	41.45
STANDAPOL ES-3	40.00
VELVETEX BA-35	5.00
STANDAMOX LAO-30	3.00
STANDAMID SD	3.00
POLYQUART H	3.00
NUTRILAN I	1.50
EUPERLAN PK-810	3.00
Kathon CG	0.05

Procedure:

Charge kettle with water. Add remaining ingredients, one at a time. Adjust pH to 6.5+-0.3 with 50% citric acid. Continue stirring until product is homogeneous. Fill off.

Comments:

The combination of amine oxide, betaine and protein contributes to the mildness and conditioning properties of the formulas. The inclusion of the polyamine quaternary also provides for good wet and dry combing.

Formula H-4952

CLEAR SHAMPOO WITH PROTEIN

INGREDIENTS	% By Weight
Water	52.45
STANDAPOL WAQ-LC	37.00
LAMEPON 4SK	5.50
STANDAMID LDO	3.50
GENEROL 122E-16	0.50
Sodium Chloride	1.00
Part B:	
Kathon CG	0.05
Fragrance & Dyes	q.s.

Procedure:

Charge kettle with water. Heat water to 50-55C. Keeping temperature constant, add remaining ingredients of Part A, under agitation. Once uniform, take heat off and continue stirring while product cools. At 40C, add individual components of Part B, under agitation. Adjust pH to 6.5+-0.3 reaches room temperature. Fill off.

Comments:

The addition of the ethoxylated Soya Sterol provides a desirable after shampoo sheen to the hair coupled with somewhat of an emollient effect. Milder formula with improved conditioning properties.

PEARLIZED CONDITIONING SHAMPOO

INGREDIENTS	% By Weight
Standapol AEI	35.00
Velvetex CDC	5.00
Standamox CAW	3.00
Cosmedia Guar C-261N	0.75
Aethoxal B	1.50
Euperlan PK-810	3.00
Kathon CG	0.05
Fragrance	0.25
Deionized Water	q.s. to 100
Citric Acid to pH 6-6.5	

Preparative Procedure:

- 1) Maintain moderate stirring while blending ingredients at room temperature. Add the Standapol AEI to the water, then stir in Velvetex CDC and Standamox CAW.
- 2) Slurry Guar C-261N with Aethoxal B, then add to main batch. Stir until Guar is hydrated. Batch will be slightly hazy.
- 3) Stir in Euperlan PK-810. Adjust to pH 6-6.5 than add Kathon CG and fragrance.
- 4) Package.

Comments:

Cosmedia Guar C-261N is a cationic gum that is compatible with anionic surfactants and adds conditioning and antistatic properties to these shampoo systems.

SOURCE: Henkel: Formula HOB-270-27B

SHAMPOO

RAW MATERIALS	% By Weight
Hoe S 3267	22,50
Water	52,00
Texapon NA	22,50
Belsil DMC 6033	1,00
Belsil ADM 6041 E	1,00
Ammonium Chloride	1,00
Preservatives, fragrances	q.s.

Dissolve Hoe S 3267 in water, add Texapon NA, Belsil DMC 6033 and Belsil ADM 6041E, homogenise the mixture and adjust the desired viscosity with the ammonium chloride.

Temperature stability: at 45C over 10 weeks.

Clear, thin gel.

SOURCE: Wacker Silicone: Formulation 151 AH

PEARLY SHAMPOO

RAW MATERIALS	% By Weight
1. Ammonium Laureth Sulfate 27%	40.00
2. MACKALENE 426	4.00
3. MACKAMIDE PKM	3.00
4. Ethylene Glycol Di-Stearate	1.50
5. MACKERNIUM 007	0.60
6. MACKSTAT DM	Q.S.
7. Color, Fragrance	Q.S.
8. Magnesium Sulfate (Epsom Salt)	1.00
9. Sodium Chloride	0.30
10. Deionized Water Q.S. to	100.00

Procedure:

1. Place #1, #2, #3 and #4 into stainless steel mixing tank, equipped with a slow speed mixing agitator.
2. Start heating the contents to 170 degrees F.
3. Start slow speed mixing and add D.I. Water 170 degrees hot.
4. In a part of the hot water dissolve #8 and #9 and add to the blend in the batch tank and mix in for 10-15 minutes.
5. Then start fast cooling, mix in #5 at 113 degrees F. and #6 and #7 at 105 degrees F.
6. Let the product stay for a few hours (or over night) without mixing then fill.

pH: 5.5-6.5

Addition of more of #9 will thin out solution if it is too viscous.

Formula No. BP-4C

PEARLESCENT SHAMPOO CONCENTRATE

RAW MATERIALS	% By Weight
TEA Lauryl Sulfate	50.0
MACKAMIDE LLM	30.0
MACKESTER SP	5.0
Propylene Glycol	5.0
Sodium Chloride	1.0
Phosphoric Acid to pH = 7.5	
MACKSTAT DM	qs
Water, Fragrance, Dye qs to	100.0

Procedure:

1. Add first five components to water and heat to 70 degrees C.
 2. Blend until homogenous.
 3. Cool to 40 degrees C. and add MACKSTAT DM, dye and fragrance.
- Remarks: This product can be diluted one pint to a gallon with water. This viscosity can be controlled by regulating the propylene glycol.

BRIPHOS O3D	1.5
Triethanolamine/sodium hydroxide	qs to pH adjust to 6.0-6.5
Perfume, dye, preservative	qs
Sodium or ammonium chloride/ hexylene glycol	qs to adjust viscosity
Water	Balance

BRIPHOS O3D gives outstanding gloss and manageability to the hair. Designed for normal hair and include BRIPHOS O3D at approximately 1.5%. For dry hair this level should be increased to about 2.0% and for greasy hair reduced to about 1.0%.

These shampoos leave the hair with excellent overall manageability and high gloss.

SHAMPOO

RAW MATERIALS	% By Weight
Deionized water	51.35
TEALS	30.00
Germaben II	1.00
INCROMIDE LR	3.50
INCROMIDE CAC	2.00
CROSULTAINE T-30	8.00
CROQUAT L	0.25
CRODAFOS SG	1.00
Citric Acid (10% Soln)	2.90

pH: 6.55

Viscosity: 3,300 cps

Procedure:

Charge vessel with water, add TEALS and Germaben with agitation. Start heating batch to 65-70C. When the batch reaches temperature, add CAC, LR and Crosultaine T-30 one at a time with agitation. Mix until uniform and clear. Cool to batch to 40C and add Croquat L and then Crodafos SG. Cool to room temperature and add citric acid to adjust product to desired pH.

The combination of CROSULTAINE T-30, TEALS and amides have been optimized to yield a gentle cleansing; medium viscosity shampoo with good foam characteristics. The incorporation of CROQUAT L and CRODAFOS SG provide conditioning benefits to hair.

SHAMPOO FOR OILY HAIR

INGREDIENTS	% By Weight
A Texapon NSO	23,000
Texapon K 14 S special	23,000
Lamepon S	4,000
Cremogen M-82 730 337	5,000
Perfume Oil	0,500
B Demineralized Water	39,800
Phenonip	0,500
Sodium chloride	4,000
Sodium hydroxide (10% aq. solution)	0,200
(approx. 14% active surfact.)	

Manufacturing Process:

Part A: Mix all the ingredients well under stirring.

Part B: Solve all the ingredients in water.

Add part B to part A under stirring.

Final pH should be 6,5 and should be controlled.

Remarks: without any colour dye:

the yellow-brownish colouring of the shampoo depends on the native colouring of the plant extract.

Recommendation for colouring:

To receive a green color add the following colour solution:
0,50% Sicomet Blue S 74180 (0,1% aq solution)/C.I. 74180

PEARLESCENT LUXURY SHAMPOO

RAW MATERIALS	% By Weight
MONAMATE LNT-40	25.0
Sodium Lauryl Sulfate (28%)	55.0
MONAMID 1089	5.0
Cerasynt IP	0.5
Preservative	0.3
H3PO4 (85%)	0.4
Water	13.8

Procedure:

Mix Sodium Lauryl Sulfate, water and preservative. Add H3PO4. Stir and add MONAMID 1089. Stir until homogeneous and add MONAMATE LNT-40. Add Cerasynt IP. Stir and heat to completely melt the solid material (approx. 60C). Cool with stirring. At 40C add any perfume or colors. Continue stirring and cooling to 25C. Adjust pH to 6.0-7.0.

Appearance: Pearly liquid
 Nominal Activity: 31%
 Viscosity: 4000-5000 cps

MONAMATE LNT-40 in this formulation provides an immediate luxurious lather which gently cleanses without stripping and is easily rinsed off leaving manageable hair.

Comperlan KD	1.0
Sodium chloride	2.0

Preparation:

Weigh out in the order given and stir to dissolve.

Properties:

Clear, viscous solution, mild cleansing action, improves wet-combability, gives body to the hair and prevents dry hair from charging electrostatically.

Applications:

Spread evenly through the hair and work into lather with some water. Rinse out with plenty of water.

SHAMPOO FOR NORMAL/DRY HAIR

RAW MATERIALS	% By Weight
Part A:	
Deionized Water	56.02
TEALS	25.00
Germaben II	1.00
INCROMIDE LR	3.00
INCROMIDE CAC	1.00
CROSULTAINE E-30	3.50
Disodium EDTA	0.30
Part B:	
INCRODET TD-7C	6.00
INCROQUAT MINK-85	0.50
CRODACEL QS	0.50
Part C:	
HYDROTRITICUM	0.50
TEA (10% Soln)	2.68
pH: 6.58	
Viscosity: 850 cps	

Procedure:

Add water, Disodium EDTA and Germaben II to mixing vessel. Start mixing and heat to 65-70C. Add remaining Part A ingredients one at a time with agitation. Mix until uniform. Cool to 50C and add Part B ingredients in given order with mixing. Cool to 40C and add Hydrotriticum. Cool to room temperature and adjust pH with TEA.

The blend of CROSULTANE E-30, INCRODET TD-7C, TEALS and the amides have been balanced to provide a low viscosity cleanser appropriate for normal to dry hair. The addition of INCROQUAT MINK-85, CRODACEL QS, and HYDROTRITICUM enhance the conditioning benefits of this shampoo.

MACKAM 35HP	4.0
Sodium Chloride	Q.S. to 2-5 M cps
MACKSTAT DM	0.4
Water	Q.S. to 100.0

Procedure:

1. Add components (except NaCl and DM) to water and heat to 70C.
 2. Blend until homogenous.
 3. Cool to 50C and add NaCl and MACKSTAT DM.
 4. Adjust pH to 6.0-6.5 with citric acid and add fragrance.
- Formula No. BP-39B

MILD SHAMPOO

RAW MATERIALS	% By Weight
Sodium Laureth Sulfate (30%)	20.0
MACKAMIDE C	2.0
MACKAM 35	4.0
MACKANATE OM	6.0
Sodium Chloride	2.0
MACKSTAT DM	q.s.
Water, Dye, Fragrance qs to	100.0

Procedure:

1. Add component to water and heat to 40 degrees C.
2. Blend until clear and adjust pH to 6.5-7.0 with citric acid.

ANTI-DANDRUFF SHAMPOO

RAW MATERIALS	% By Weight
Sodium Olefin Sulfonate	20.0
MACKAM 2C75	16.0
Zinc Omadine	2.6
MACKOL 16	2.0
MACKAMIDE LLM	2.5
Bentone EW	0.8
MACKSTAT DM	qs
Water, Dye, Fragrance qs to	100.0

Procedure:

1. Heat water to 70 degrees C.
2. Disperse and homogenize the Bentone EW.
3. Add Zinc Omadine and Mackol 16.
4. Cool to 50 degrees C. and add MACKAM 2C75, AOS and Zinc Omadine.
5. Cool to 40 degrees C. and add remaining components.

ULTRA PEARLESCENT CONDITIONING SHAMPOO

INGREDIENT	% By Weight
A VEEGUM Ultra	2.00
Deionized Water	61.25
B Mica (and) Titanium Dioxide (Timiron MP-1001)	0.50
C Sodium Laureth Sulfate	25.00
Lauramide DEA (Monamid 716)	7.50
VANSEAL CS	3.75
Preservative, Fragrance	q.s.

Procedure:

Sift VEEGUM Ultra into the water while mixing at 700 rpm with a propeller stirrer. Adjust the propeller speed to 1500-1700 rpm and mix for 30 minutes. Add the B ingredients and mix for 5 minutes. Adjust the speed to 200 to 500 rpm and add the C ingredients in the order shown, mixing after each addition until smooth and uniform.

Product Characteristics:

Viscosity: 7000-9000 cps

pH: 5.0+-0.2

Color: Pearlescent, white

Features:

This luxurious shampoo formula is thickened using VEEGUM Ultra which also suspends the mica pigment that provides pearlescence. VANSEAL CS (cocoyl sarcosine) provides mildness and hair conditioning while combining with lauramide DEA to markedly enhance the quality and stability of the lather produced during shampooing.

Shaving Products

AEROSOL SHAVE CREAM

RAW MATERIALS	% By Weight
Concentrate:	
Oil Phase:	
GLUCAM E-20 Distearate	5.0
Stripped Coconut Fatty Acids	2.0
Stearic Acid, xxx	5.5
AMERLATE LFA	0.8
Lauramide DEA	0.5
Water Phase:	
Carbomer 941 (3% aqueous)	3.0
Deionized Water	79.6
Triethanolamine (99%)	3.6
Perfume and Preservative	q.s.

Procedure:

Heat oil to 70C. Heat water phase minus the triethanolamine to 70C. Add water to oil at 70C and immediately add the triethanolamine. Cool while mixing to 35C and add the perfume.

Fill: 97% Concentrate: 3% Propellant A-46

Description:

Highly emollient aerosol shave cream. GLUCAM E-20 Distearate gives excellent spreading properties while imparting slip and lubricity to improve razor glide. The triethanolamine soap of AMERLATE LFA is a powerful emulsifier for the propellants and gives long-term stability to the aerosol pack.

SOURCE: Amerchol Corp.: GLUCAM E-20: Formula T51-114-1A

AEROSOL SHAVE CREAM

RAW MATERIALS	% By Weight
Concentrate Phase:	
GLUCQUAT 100	2.00
SOLULAN 25	1.50
SOLULAN 5	0.50
Stearic Acid, xxx	5.00
Triethanolamine (99%)	2.62
Deionized water	88.38
Perfume and preservative	q.s.

Description:

This aerosol shave cream has a rich, lathery foam with good spreadability. GLUCQUAT 100 provides lasting conditioning effects such as emolliency and moisturization. SOLULAN 5 (w/o) and SOLULAN 25 (o/w) help to stabilize the aerosol foam.

SOURCE: Amerchol Corp.: GLUCQUAT 100: Formula T62-166-3

AFTER SHAVE BALM

INGREDIENTS	% By Weight
A Demineralized Water	89,150
Phenonip	0,500
D-Panthenol	1,000
Trilon B liquid	0,100
Allantoin	0,100
Carbopol 940	0,400
B Sodium hydroxide (10% aq. solution)	1,750
C Frescolat, Type ML 620105	1,000
Perfume Oil	1,000
Neo Heliopan, Type AV 660523	2,000
Abil B 8839	3,000

Manufacturing Process:

Part A: Dissolve the ingredients (without Carbopol 940) in water. Then slowly add under stirring Carbopol 940 and continue until completely dispersed.

Part B: Add slowly the sodium hydroxide solution to part A for neutralisation. A transparent high viscid gel will be formed.

Part C: Blend perfume oil, Neo Heliopan, Type AV and Abil B 8839, dissolve Frescolat in this mixture (if necessary heat to max. 35C). Add part C while stirring to the gel.

After complete mixing it is necessary to pass the dispersion through a homogenizer (colloid mill).

AFTER SHAVE BALM

INGREDIENTS	% By Weight
A. Deionized Water	69.7
Carbomer 940	0.2
Propylene Glycol	1.0
Allantoin	0.2
Methylparaben	0.2
Triethanolamine	0.2
B. Polysorbate 80	2.0
Glyceryl Stearate and PEG 100 Stearate	3.0
PEG-75 Lanolin Oil	2.0
Cocoa Butter	5.0
Ethylene Glycol Monostearate	2.0
C. DERMATEIN GSL	3.0
D. Dimethicone	1.0
Diazolidinyl Urea	0.3
SD Alcohol-40	10.0
Menthol	0.1
Fragrance	0.1

Procedure:

Begin heating water to 80C; sift Carbomer into water with constant agitation; mix until clear. Add rest of Part A ingredients. Mix well. Add Part B ingredients in order. Mix until homogenous. Begin cooling to room temperature. Slowly add DERMATEIN GSL, mix until smooth. Add Part D ingredients in order; mix until uniform.

Description:

This men's light facial lotion demonstrates how Dermatein GSL helps skin recover from nicks and cuts caused by shaving. DERMATEIN GSL works to replace the lipid lost from dry, damaged skin. DERMATEIN GSL rejuvenates skin by increasing the skin's ability to bind moisture.

Cool to room temperature. Add phase B to phase C. Add phase D to phase A, avoiding air entrapment. Add BC to AD and mix until clear and uniform.

Description:

Clear, hydroalcoholic, low viscosity, pourable gel suitable for use as a soothing after shave skin conditioner. QUATRISOFT POLYMER LM-200 serves as a substantive, cationic conditioner for the face, giving a smooth, emollient afterfeel.

SOURCE: Amerchol Corp.: QUATRISOFT POLYMER LM-200: Formula T53-154-3

AFTER-SHAVE-EMULSION

RECIPE	% By Weight
A HOSTAPHAT KL 340 N	3.00
HOSTACERIN DGS	6.00
Mineral oil, high viscosity	10.00
Menthol	0.10
Camphor	0.10
B HOSTACERIN PN 73*	0.90
C ALLANTOIN	0.20
Extrapon Hamamelis	2.00
Water	47.40
Preservative	q.s.
D Ethanol	30.00
Perfume	0.40

* Alternative thickeners could also be used.

Procedure:

- I Melt A at 70C, then add B.
- II Heat C to 70C.
- III Stir II into I.
- IV Stir until cool.
- V At 40C the components of D are added to IV.
- VI Homogenize if necessary.

AFTER SHAVE TONER

RAW MATERIALS	% By Weight
I.	
Water	51.00
Carbomer 940	0.35
Triethanolamine (99%)	0.60
II.	
Water	30.05
PHOSPHOLIPID PTS	1.00
SD3A Alcohol	15.00
III.	
Phenyl Dimethicone (556 Fluid)	2.00

Part I:

Slowly add Carbomer 940 to water with good agitation. After Carbomer 940 is completely dissolved add triethanolamine.

Part II:

In a separate container, mix water and PHOSPHOLIPID PTS. Heat to 65C with agitation until PHOSPHOLIPID PTS is completely dissolved. Cool to 30-35C and add SD3A Alcohol. Add to Part I and mix until homogeneous.

Part III:

Add Phenyl Dimethicone with agitation. Add Fragrance, coloring and preservative as required, cool to room temperature and fill.

BRUSHLESS SHAVE CREAM

INGREDIENT	% By Weight
A VANSEAL NACS-30	15.00
VANSEAL CS	2.50
Deionized Water	25.75
Potassium Cocoate	35.00
Sorbitol, 70%	5.00
PVP-K-30	0.75
B AGI Talc	5.00
C Stearic Acid	7.00
Propylene Glycol Stearate (Cerasynt PA)	2.50
Cetyl Alcohol	1.50
D Preservative, Dye, Fragrance	q.s.

Preparation:

Mix A ingredients together and heat to 55C with gentle stirring until clear. Add B to A with adequate agitation. Heat C to 60C. Add C to (A + B), mixing until uniform and homogeneous. Cool to 30C and add D.

Consistency: Flowable gel (Viscosity: 2500-3500 cps)

Suggested Packaging: Plastic bottle or pump.

Features:

This formulation features VANSEAL NACS-30, sodium cocoylsarcosinate, VANSEAL CS, cocoylsarcosine and potassium cocoate as high foaming yet mild surfactants. Sorbitol adds humectancy while PVP and talc provide lubricity. Stearic acid, propylene glycol stearate, and cetyl alcohol are included as thickeners and to provide pleasant after-feel.

Formula No. 434

ULTRA AEROSOL SHAVE CREAM FOR SENSITIVE SKIN

INGREDIENT	% By Weight
A VEEGUM Ultra	1.00
Deionized Water	75.80
B Glycerin	3.00
Triethanolamine	4.00
C Stearic Acid XXX	6.00
Coconut Acid (Emery 622)	1.30
Mineral Oil	2.50
Cetyl Alcohol	1.00
VANOX PCX (BHT)	0.20
D VANSEAL NACS-30	5.00
Methylparaben	0.20
Fragrance	q.s.

Product Characteristics:

Viscosity: 500-700 cps

pH: 8.0+-0.2

Features:

VEEGUM Ultra is used in this emulsion formula to enhance the stability of the luxurious lather produced by combining VANSEAL NACS-30 (sodium cocoyl sarcosinate) with stearic and coconut acid soaps. VANOX PCX acts as an antioxidant in this formulation.

Formula No. 451

COOLING LOTION

INGREDIENTS	% By Weight
A Demineralized Water	86.910
Phenonip	0.500
D-Panthenol	1.000
Trilon B liquid	0.100
Allantoin	0.100
Creragen Hamamelis Water 739023	4.000
Brilliant Blue FCF 308001 0.1% aq. solution	0.040
Carbopol 940	0.400
B Sodium hydroxide (10% aq. solution)	1.750
C Frescolat 620105	1.500
Perfume Oil	0.200
Isopropyl myristate	0.500
Abil B 8839	3.000

Manufacturing Process:

- Part A: Dissolve the ingredients (without Carbopol 940) in water. Then slowly add while stirring Carbopol 940 and continue until completely dispersed.
- Part B: Add slowly the sodium hydroxide solution to part A for neutralisation. A transparent gel will be formed.
- Part C: Dissolve Frescolat and perfume oil in isopropyl myristate and Abil B 8839 (if necessary heat to max. 35C). Add part C while stirring to the gel part A/B.

After complete mixing it is necessary to pass the dispersion through a homogeniser (colloid mill).

HYDROALCOHOLIC AFTERSHAVE BALM

RAW MATERIALS	% By Weight
Phase A:	
Carbomer 934 (3% aqueous sol'n)	6.6
Deionized Water	70.4
Phase B:	
GLUCAM E-20 Distearate	2.0
PROMULGEN D	2.5
PROPAL	1.5
Triethanolamine (10% aqueous sol'n)	2.0
Phase C:	
Specially Denatured Alcohol #40	15.0
Perfume and preservative	q.s.

Procedure:

Heat phase A to 80C. Heat phase B minus the triethanolamine to 80C. Add phase A to phase B at 80C. Mix while cooling to 50C at which point add the triethanolamine. When uniform add phase C and then the perfume. Stir with cooling to 30C and pour.

Description:

An opaque, soothing, low alcohol aftershave lotion with medium viscosity. GLUCAM E-20 Distearate, in combination with PROPAL, leaves a smooth, emollient afterfeel on the skin. This pair of emollients protects the skin from the drying effects of the alcohol. PROMULGEN D enhances the stability and controls viscosity drift.

SOURCE: Amerchol Corp.: GLUCAM E-20 Distearate: Formula T52-34-1

PRE-SHAVE LOTION

RAW MATERIALS	% By Weight
A Ethanol	75,00
B Belsil DMC 6031	4,00
Adol 66	2,50
Isopropyl Myristate	5,00
Rewolan AWS	2,50
C Water	11,00

Mix B into A stirring lightly. Add C stirring lightly. Stir until a clear solution is formed.

Temperature stability: at 45C over 10 weeks.

Slightly yellow, clear, low viscosity.

SOURCE: Wacker Silicone: Formulation 351 AH

PRE-SHAVE LOTION

INGREDIENTS	% By Weight
A Ethylalcohol (96Vol.%) denatured	75,000
Isopropyl adipate	4,000
Perfume Oil	1,000
Frescolat 620105	1,000
B Demineralized Water	13,700
1,2-Propylene glycol	3,000
Lactic acid, 90%	0,300
Cremogen Tormentil 739 018	0,500
Cremogen Camomile 739 012	0,500
Cremogen Hamamelis (Witch Hazel) 739 008	0,500
Cremogen Sage 739 016	0,500

Manufacturing Process:

Part A: Mix the ingredients until all is dissolved.

Part B: Mix the ingredients. Then add part A to part B and stir. For maturing allow to store the Pre Shave Lotion for 2-4 weeks at low temperatures (approx. 4-10C). After maturing filter the Pre Shave Lotion with fine clarifying sheets at low temperatures.

Types of sheets: Seitz Supra 80 or Seits K 100.

Supplier: SEN Seitz Filter Werke, Planiger Str. 137,
D-6550 Bad Kreuznach

11. Solulan C-24	0.30	0.29
12. Perfume	0.30	0.29
13. Isobutane	----	3.40

Procedures:

- A. Clean and dry a stainless steel tank of suitable capacity. Meter #1 into the tank. Start agitation and disperse #2 at room temperature (Do Not Dump! Use Eductor). When thoroughly dispersed, begin heating the batch and continue agitation. Add #3, #4, #5, #6 and #7. Continue agitation (Avoid Aeration).
- B. In a separate container mix #8, #9, and #10. Start heating this tank to 75C. (167F). Agitate well and add this phase B to phase A. Continue agitation at this temperature, i.e. 167F for 45 minutes (AVOID AERATION). Continue agitation and cool the batch to 45C. (113F).
- C. In a separate container add #11 and heat to 45C. (113F). Add #12 and mix well. Now, add this phase to main batch at 45C. (113F.). Continue slow agitation and cool the batch to room temperature. Withdraw a sample at room temperature and send to Quality Control Lab. Filter through 100 mesh Triclove before filling. (If aerated, do not fill the same day).

SHAVING GEL

RAW MATERIALS	% By Weight
Water	q.s.
CELLOSIZÉ Polymer PCG-10	1.25
POLYOX WSR-205	0.10
Water	3.23
Palmitic Acid	6.00
Triethanolamine (99%)	5.00
AMEROXOL OE-20	2.00
Glycerin	2.00
Isopentane	6.00
Fragrance, Preservative, Color	q.s.

Procedure:

Add CELLOSIZÉ Polymer PCG-10 to water at room temperature with rapid stirring. When well dispersed heat to 75C. Make a 3% solution using 0.1% of POLYOX added to 3.23% water. Add to the CELLOSIZÉ dispersion as it is heating to 75C. When batch is 75C and a clear gel has formed, add Palmitic Acid, Triethanolamine, AMEROXOL OE-20, Glycerin and the Preservative system to the batch individually waiting for each ingredient to dissolve before adding the next one. When the batch is uniform, cool to room temperature and add Fragrance and Color. Allow air to escape from the mixture. Cool Isopentane and shave gel to 15C. Add Isopentane slowly to batch with gentle stirring to avoid introducing foam. Package in sepro-type aerosol cans with A-40 propellant.

Description:

This shaving gel is thickened to its gel consistency with CELLOSIZÉ Polymer PCG-10. It contains TEA-Palmitate soap for foaming and AMEROXOL OE-20 for foam stability. POLYOX WSR-205 is added to provide lubrication between the skin and the razor blade.

LIQUID HAND SOAP (PEARLESCENT)

INGREDIENTS	% By Weight
Water (Deionized)	51.8
Dowicil-200	0.2
Schercoquat IAS (90%)	1.0
Schercotaine CAB-G (45%)	10.0
Schercomid SLM-LC	1.0
Ethylene Glycol Monostearate	1.0
Stepanol WA Paste (30%)	35.0
Fragrance	q.s.

Procedure:

1. Heat water to 45-50C. With stirring add Dowicil-200 and Schercoquat IAS. Mix to dissolve.
2. Add Schercotaine CAB-G.
3. Dissolve (melt) EGMS in Schercomid SLM-LC, then add to above.
4. Add Stepanol WA Paste.
5. When uniform, cool and add fragrance.

Specifications:

Activity, %: 18
 Viscosity @ 25C: 4,000-6,000
 pH @ 25C: 8.0

- * To increase viscosity, decrease % amide.
 To decrease viscosity, increase % amide.

OPAQUE LIQUID SOAP

INGREDIENTS	% By Weight
Water	75.88
Sodium C14-C16 olefin sulfonate, 40% active	7.50
Sodium lauroyl sarcosinate, 30% active	6.66
Cocamidopropyl betaine, 35% active	6.66
Glycol stearate	1.00
NATROSOL 250HR hydroxyethylcellulose	0.80
Propylene glycol	0.50
Glycerin	0.50
Tetrasodium EDTA	0.30
Stearalkonium chloride	0.10
Methylparaben	0.10

Procedure:

1. Dissolve the NATROSOL in water. Add the methylparaben to the finished solution.
2. While slowly stirring the water-soluble polymer solution, add the stearalkonium chloride, olefin sulfonate, and glycol stearate. Heat the mixture to 80C until all of the glycol stearate has melted and the solution has turned opaque.
3. Add the remaining ingredients while cooling the solution slowly to room temperature.
4. Add color and fragrance.

TRANSPARENT TOILET SOAP

INGREDIENTS	% By Weight
Water	65.70
Sodium C14-C16 olefin sulfonate	20.00
Sodium lauroyl sarcosinate	10.00
Cocamide MEA	3.00
NATROSOL 250HR	1.00
Disodium EDTA	0.20
Methylparaben	0.10

Procedure:

1. Dissolve the NATROSOL in water. Add the methylparaben to the finished solution.
2. In a separate vessel, combine the surfactants, heat to 80C, and mix until homogeneous.
3. Add the surfactant solution to the water-soluble polymer solution and mix until well blended.
4. Add the disodium EDTA and cool to room temperature.

NATROSOL 250HR gives emolliency to this transparent hand soap. The excellent lathering properties of the formula are attributed to the combination of olefin sulfonate, sodium lauroyl sarcosinate, and cocamide MEA.

SOURCE: Aqualon Co.: NATROSOL 250: Formulas

PEARLIZED HAND SOAP

RAW MATERIALS	% By Weight
Water	56.5
MONATERGE 1164	40.0
MONAMID 716	3.0
Pearlizing Agent	0.5

Procedure:

Mix ingredients while warming to 65C. Agitate until uniform. Cool and adjust pH to 6.5. Add coloring, fragrance and preservative as required.

Appearance: Off white, opaque liquid.

Viscosity: Approximately 1500 cps.

SOURCE: Mona Industries, Inc.: MONAMID 716: Formula

LIQUID SOAP-I

RAW MATERIALS	% By Weight
MIRANOL SM Conc.	20.0
Potassium Cocoate (40%)	20.0
Water	60.0

LIQUID SOAP-II

RAW MATERIALS	% By Weight
MIRANOL SM Conc.	10.0
Potassium Cocoate (40%)	10.0
Sodium Chloride	1.0
Water	79.0

Note: Unlike straight soap formulations, these will not clog dispenser valves; but the addition of sodium chloride in formulations intended for use in dispensers with metal valves is not recommended. It is important that potassium soaps be used because triethanolamine soaps foam considerably less in such formulations.

CLEAR LIQUID SOAP

RAW MATERIALS	% By Weight
MIRANOL CM-SF Conc.	20.0
Cedepal SN 303	24.0
Cedemide AX	2.0
Water	54.0

Procedure:

Blend all ingredients at 55-60C and adjust pH to 6.5 with hydrochloric acid. Without fragrance, this shampoo has a viscosity at 25C of about 5000 cps. Solids: 16.4%

SUN PROTECTION GEL

Composition	% By Weight
Carbopol 934	1.0
Triethanolamine (TEA)	1.35
Water, demineralized	83.45
Germall 115	0.2
Eusolex 232	4.0
Sorbitol	5.0
Pearl lustre pigments	5.0
e.g. COLORONA Bronze or COLORONA Oriental Beige	

Preparation:

The pearl pigment is dispersed in a solution containing water, GERMALL 115 and Sorbitol. Carbopol 934 is added and dissolved under stirring and stirring is continued until a clear solution is obtained. Then successively the TEA (mixed with a small amount of water) are added.

SOURCE: EM Pigments Division: Formula

AFTER SUN GEL

INGREDIENTS	% By Weight
A Demineralized Water	66,800
1,2-Propylene glycol	3,000
Allantoin	0,100
D-Panthenol	1,000
Cremogen Camomile Special 739027	3,000
Glycerin 86%	3,000
Carbopol 940	0,500
B Demineralized Water	5,000
Triethanolamine	0,900
C Ethylalcohol (96Vol.%) denatured	15,000
Mulsifan RT 203/80	1,200
Perfume Oil	0,200
Phenonip	0,300

Manufacturing Process:

- Part A: Dissolve propylene glycol, Panthenol, Allantoin, Cremogen Camomile and glycerin in water. Then disperse the Carbopol using high speed agitation. Mix to form a uniform dispersion free from lumps.
- Part B: Dilute triethanolamine with water and add slowly into Part A for neutralisation. A transparent high viscous gel will be formed.
- Part C: Dissolve fragrance, Phenonip and Mulsifan in ethyl alcohol and add slowly under stirring into the gel part A/B.

The pH-value of the finished gel should be approx. 6,5-7.

Benzyl Alcohol	4	0.05
Fragrance SMCO HQ-115	4	0.10

Manufacturing Procedure:

1. Combine all Sequence 1 ingredients into main kettle. Heat to 78C with Lightnin' mixing. Thoroughly disperse Veegum.
2. Combine all Sequence 2 ingredients in side kettle. Heat to 78C with Lightnin' mixing. When all solids are dissolved, slowly sprinkle in Sequence 3 under continuous mixing. Heat to 80C to insure that all materials are dissolved.
3. When both phases are at proper temperatures, stop Lightnin' mixing and insert homogenizer mixer into main kettle. Slowly add combined Sequences 2 and 3 under homo mixing to Sequence 1. Maintain temperature at 78C for 10 minutes after oil phase addition is complete.
4. Remove homo mixer. Begin side-wiping agitation and start cooling batch. At 40C add premixed Sequence 4 and thoroughly disperse. Cool to 25C.

CLEAR ANHYDROUS SUNSCREEN

RAW MATERIALS	% By Weight
ABIL B 8839	56.0
ABIL OSW-12	20.0
Diisopropyl Adipate	10.0
C12-15 Alcohols Benzoate	10.0
Octyl Dimethyl PABA	4.0

Procedure:

Mix ingredients in order.

This formula is anhydrous, oil-free and clear. It is quick spreading and hydrophobic on the skin.

COLD MIX - W/O EMULSION SUNSCREEN

RAW MATERIALS	% By Weight
A. ABIL WE-09	5.0
Octyl Methoxycinnamate	4.0
ABIL B8839	5.0
ABIL Wax 9800	1.0
Mineral Oil	4.0
Caprylic/Capric Triglyceride	3.0
B. Water	75.8
Benzophenone-4	1.5
Sodium Chloride	0.4
Sodium Phosphite	0.3
Sodium Hydroxide	to pH 7.5

Procedure:

1. Blend Phase A.
2. Mix Phase B.
3. With slow lightening mix - slowly stream B into A. A milky dispersion will form.
4. Homogenize.

CLEAR SUNSCREEN OIL

RAW MATERIALS	% By Weight
ABIL B8839	16.0
Isopropyl Myristate	13.0
Mineral Oil	68.0
Octyl Dimethyl PABA	3.0
Perfume	QS

Procedure:

Mix together all ingredients until uniformly blended; add color desired.

Comments:

The addition of Cyclomethicone to a traditional mineral oil-based formulation results in improved aesthetics; the product is perceived as being less oily when applied to the skin. The effect becomes more apparent as the ration of Cyclomethicone to Mineral Oil is increased.

CLEAR LIQUID SUNBLOCK SPF 15

INGREDIENTS	% By Weight
VELSAN D8P-3	10.0
Spectrasorb UV 9	3.0
SD Alcohol 40	25.0
Neobee M-20	5.0
Escalol 507	7.0
Dow 344 Fluid	50.0
SPF 15	
CL 9-145-02	

CLEAR LIQUID SUNBLOCK SPF 20-25

RAW MATERIALS	% By Weight
Velsan D8P-3	10.0
Spectrasorb UV 9	6.0
SD Alcohol 40	24.1
Neobee M-20	4.6
Escalol 507	7.0
Dow 344 Fluid	48.3
SPF 20-25	
CL 9-145-03	

Procedure:

Dissolve Benzophenone-3 into the Velsan D8P-3. Add rest of the ingredients in any convenient order and mix to homogeneity.

Hard-to-dissolve Benzophenone-3 instantly solubilizes in Velsan D8P-3 to produce these cold mix sunblocks similar to the popular pre sun product. Velsan D8P-3 imparts an excellent non-greasy afterfeel to the formula.

DIHYDROXYACETONE SELF TANNING LOTION

RAW MATERIALS	% By Weight
A) Distilled Water	64.15
B) Propylene Glycol	3.0
Methylparaben (Tri-K)	0.2
Propylparaben (Tri-K)	0.1
C) Amigel	0.4
D) T Wax	3.5
T Base	2.0
Sesame Oil (Tri-K)	2.5
Jojoba Oil (Tri-K)	2.5
Squalane (Tri-K)	5.0
DC 200 Silicone (350cs)	0.5
Tocopherol Acetate (Tri-K)	0.2
E) Phenoxyethanol (Tri-K)	0.7
Fragrance TC-316	0.25
F) Distilled Water	10.0
Dihydroxyacetone (Tri-K)	5.0

Procedure:

Heat A to 75C. Dissolve parabens in glycol. Then disperse Amigel into glycol. Add Glycol mixture to water while mixing vigorously with a propeller. Weigh D and heat to 75C. Add D to water phase with mixing. Switch to side sweep agitation and cool to 45C. Add E. Mix and cool to 40C and add F. Cool to room temperature. Adjust pH if necessary to pH 5.

A smooth, quickly absorbing lotion that will produce a golden bronze "tan" in 3 hours.

Formula MS-2-53-5

SUNTAN OIL SPRAY

INGREDIENT	% By Weight
Rice Bran Oil	4.0
Canola Oil	50.0
Safflower Oil (Hi Oleic)	20.0
Sweet Almond Oil	4.0
Apricot Kernel Oil	2.0
Sesame Oil	1.75

Part (D):	
Fragrance	q.s.
Part (E):	
Triethanolamine	0.9

Procedure:

Heat the water in a steam jacketed kettle and add the Carbomer 934 under agitation. Heat Part (B) in a steam jacketed kettle until clear under agitation. When fully mixed add Part (B) to Part (A) under agitation. Then add Part (C) and mix thoroughly. Next add Part (D) and finally add Part (E) with agitation. Cool to 120F and package.

TANNING JELLY

RAW MATERIALS	% By Weight
Petrolatum USP	49.0
Mineral Oil #7	20.0
Henkel Cutina-LM	23.9
Ross Jojoba Oil	2.0
Escalal 507	5.0
Propyl Paraben	0.1
Fragrance	q.s.

Procedure:

Load ingredients in steam jacketed kettle and melt to a liquid state under agitation. When thoroughly mixed, cool to 130F, fragrance and package.

'SUN BLOC' SUNSCREEN SPF 15

INGREDIENTS	% By Weight
A. Deionized Water	61.9
Carbomer 1342	0.5
Propylene Glycol	3.0
Methylparaben	0.2
B. Stearic Acid	3.0
Glyceryl Stearate and PEG 100 Stearate	3.0
Cetyl Alcohol	0.5
Lanolin	1.0
PVP Eicosine Copolymer	2.0
Octyl Dimethyl PABA	7.0
Octyl Methoxy Cinnamate	2.0
Benzophenone-3	3.0
C. Triethanolamine	0.8
D. SOLLAGEN	1.0
DERMATEIN GSL	5.0
E. Dimethicone	2.0
Diazolidinyl Urea	0.3
Aloe Vera	0.5
Fragrance	0.1

Procedure:

Begin heating water to 80C; sift Carbomer into water with constant agitation. Add rest of Part A. Mix until clear. Add Part B ingredients in order. Mix until homogeneous. Add TEA; mix until smooth. Cool to room temperature. Slowly add SOLLAGEN and DERMATEIN GSL; mix until uniform. Add Part E ingredients. Mix until homogeneous.

Description:

Sun damages skin--it dries out! SOLLAGEN, Soluble Collagen, provides skin with the moisture it needs. DERMATEIN GSL, Glycosphingolipids, replaces the lipid lost from the skin and increases the skin's ability to bind moisture! This formula demonstrates a total sun block--SPF 15.

SUN CARE SPF 15
PABA Free, Oil Free

RAW MATERIALS	% By Weight
A-A1 Schercemol CO	10.00
Schercemol DISD	1.00
Schercemol TISC	5.00
Silicone fl. 350 cps	0.20
Cetyl Alcohol	1.50
Glyceryl Stearate	4.00
Amphisol	2.50
A2 Parsol MCX	7.50
Dipsal	5.00
B-B1 Deionized Water	48.40
Carbopol 1342 2% Aq. Sln.	5.00
Carbopol 940 2% Aq. Sln.	5.00
B2 Glycerin	3.00
B3 Triethanolamine	0.20
C- Germaben II	1.00
D- Aloe Vera Extract	0.50
E- Fragrance	0.20

Procedure:

Phase B:

In the main beaker, disperse B1 together at 75-85C.

Add Glycerin.

Add Triethanolamine to neutralize the Carbopol gel.

Mix until a smooth gel is obtained.

Phase A:

Blend Phase A1 at 85C.

Once completely clear add A2.

Blend Phase A together until a homogeneous oil phase is obtained.

Add Phase A to Phase B with continuous mixing at 80-85C for fifteen minutes.

Cool batch to 60C with continuous mixing then add Phase C.

Continue to cool batch to 30C then add Phase D and Phase E in sequence.

Continue to cool batch with mixing to 25-28C.

Cool to room temperature. Slowly add SOLLAGEN and DERMATEIN GSL; mix until uniform. Add part E ingredients. Mix until homogeneous.

Description:

Skin needs moisture to remain healthy, especially in the searing sun! SOLLAGEN, Soluble Collagen, provides skin with the moisture it requires. DERMATEIN GSL, Glycosphingolipids, replaces the lipid lost from the skin and increases the skin's ability to bind moisture! This formula demonstrates a sun screen factor--SPF 8.

Procedure:

To neutralize Eusolex 232 dissolve Tris(hydroxymethyl)aminomethane in the water of phase A and add Eusolex 232 while stirring. When uniform add the remaining ingredients of phase A. Heat to 70C until homogeneous and cool while stirring. Disperse Carbomer 940 in the water of Phase B and homogenize. Dissolve the Tris(hydroxymethyl)aminomethane in the water of Phase C. Combine phases B and C and homogenize. Incorporate phase A. Homogenize again. Add perfume in combination with a solubilizer as required.

SUN PROTECTION LOTION

INGREDIENT	% By Weight
A VEEGUM	1.00
RHODIGEL	0.20
Glycerin	5.50
Deionized Water	68.80
B A-C 617G Polyethylene	2.00
Glyceryl Monostearate, SE (Kessco Glycerol Mono- stearate S.E.)	3.00
Dioctyl Malate (Ceraphyl 45)	2.00
Cetyl Alcohol	0.50
Mineral Oil	4.00
Steareth-2 (Brij 72)	0.30
Steareth-20 (Brij 78)	2.70
Benzophenone-3 (Escalol 567)	3.00
Octyl Dimethyl PABA (Escalol 507)	7.00
C Preservative, Fragrance	q.s.

Preparation:

Dry blend VEEGUM and RHODIGEL. Add VEEGUM/RHODIGEL blend to water preheated to 85-90C. Hydrate using maximum available shear until smooth, uniform and free of undispersed particles. Add glycerin and maintain temperature at 85-90C. In a separate container, add all B ingredients and heat to 85-90C until all components are in a liquid state. Stir gently as necessary. Slowly add B to A and homogenize for 5 minutes. Cool emulsion quickly to room temperature with gentle stirring. Add C and mix until uniform.

Consistency: Flowable liquid: Viscosity after 30 days: 1500-1900 cps

Suggested Packaging: Plastic bottles or tubes.

Features:

This medium viscosity lotion utilizes a synergistic VEEGUM/RHODIGEL blend to help stabilize the emulsion and modify the viscosity. In addition, this formula incorporates A-C 617G polyethylene to provide a luxurious after feel and improve the water resistance of the sun protection film. This product is designed to have an SPF (Sun Protection Factor) of about 15.

Procedure:

In a suitable vessel weigh Phase A, heat to 75C and completely disperse Pemulen TR-1. In another vessel able to contain the entire batch, weigh Phase B and heat to 75C with agitation. Slowly add Phase A to Phase B, mix for 10 minutes and add Phase C. Mix until uniform and start cooling with continuous agitation. Cool to 40C and add Phase D. Continue cooling with agitation to 28-25C, pass through a mill and package.

pH: 6.4

Viscosity: 100,000 cps @ 20C

This formulation provides UVA/UVB protection with the use of NEO HELIOPAN AV and NEO HELIOPAN MA. This totally eliminates the need for PABA and Benzophenone-3 to obtain such protection. This formulation has been tested and produced a SPF value of 8. With the use of resins, film formers and minimum emulsifier levels, it is anticipated that this formulation will be water-proof.

SOURCE: Haarman & Reimer Corp.: Formulation #H100-2-3

SUNSCREEN CREAM

INGREDIENT	% By Weight
A VEEGUM PRO	1.5
Water	67.7
Propylene glycol	3.0
Triethanolamine	0.6
B Benzophenone-3 (Uvinol M-40)	5.0
C12-15 Alcohols Benzoate (Finsolv TN)	7.5
Octyl Methoxycinnamate (Parsol MCX)	7.5
Mineral Oil (and) Lanolin Alcohol (Ritachol)	4.0
Stearic acid XXX	2.0
C18-36 Acid (Synchrowax AW1-C)	0.2
Glycol Stearate SE (Cerasynt MN)	0.5
Cetyl alcohol	0.5
C Preservative, Dye, Fragrance	q.s.

Procedure:

Heat the water to 75 to 80C, then slowly add the VEEGUM PRO while agitating at maximum available shear. Mix until smooth. Add remaining ingredients in order shown with careful mixing until smooth, maintain at 75 to 80C. Heat B to 75 to 80C. Add B to A and mix until cool. Add C.

Features:

Sunscreen Cream No. 421 illustrates the use of VEEGUM PRO as a suspending agent and viscosity modifier. VEEGUM PRO effectively thickens and stabilizes the emulsion even at elevated temperatures. This lotion has an estimated SPF of 12 and has a light feel with quick, greaseless rub-in. Benzophenone-3 is a UV-A absorber for protection against tanning radiation. Octyl Methoxycinnamate is a UV-B absorber for protection against burning radiation.

11. Sodium Borate, Anhydrous	0.3
12. Methyl-P-Hydroxybenzoate	0.2
13. Germall 115	0.3
14. Water	59.4

Procedure:

Weigh 1-9 and heat to 85C with slow agitation. The blend has a cloud point of approximately 80C. Above the cloud point all waxes will eventually dissolve in the blend. If a higher solvating temperature is used, solvation can be much faster. Hold the wax blend at 85C. Heat 10-14 to 85-90C and stir gently until all has dissolved. Hold at 85C.

Place wax blend in mixing container, add aqueous phase to it and shear with homomixer or colloid mill. At 67C the crude dispersion inverts and a thick creamy emulsion forms. Continue shearing while scraping the sides of the container to make sure the whole content is properly sheared. Add perfume, de-aerate and package.

SUNSCREEN FACIAL CREME WITH A SUN PROTECTION FACTOR (SPF) OF 4

INGREDIENTS	% By Weight
Part A:	
Water, deionized	70.7
KELTROL T xanthan gum	0.3
Magnesium aluminum silicate	0.2
Methyl Parasept methylparaben	0.2
Perfume	0.1
Part B:	
White Protopet #1S petrolatum	10.3
Promulgen D cetearyl alcohol and ceteareth 20	7.0
Arlacel 165 glyceryl stearate and PEG 100 stearate	5.0
Parsol MCX octyl methoxycinnamate	4.0
Glucamate SSE-20 methyl gluceth-20 sesquistearate	2.0
L-45 Silicone dimethylpolysiloxane	0.5

Procedure:

Part A:

1. Pre-mix KELTROL T magnesium aluminum silicate and methyl parasept.
2. Dissolve pre-mix thoroughly in water, agitating with a Lightnin'-type mixer.
3. Heat the solution to 65-70C (149-158F) with continued agitation.

Part B:

4. Combine all Part B ingredients and heat to 65-70C (149-158F).
5. When both solutions have reached 65-70C, add Part B to Part A while mixing.
6. Cool to 30C (86F) and add the perfume.
7. Continue cooling until the desired filling temperature is reached.

This light-bodied sunscreen creme applies and absorbs easily. KELTROL T xanthan gum provides smooth spreadability and excellent heat stability at 49C (120F).

PABA/Oxybenzone/Free

Tested SPF 18.25

This white lotion combines three sunscreens to achieve excellent UVA/UVB protection. Attaining an SPF of 18.25 without the use of Oxybenzone, PABA Derivatives or Titanium Dioxide demonstrates the synergism of the three sunscreens: NEO HELIOPAN AV, NEO HELIOPAN HYDRO and NEO HELIOPAN MA.

pH: 6.8

Viscosity: 168,000 cps

Offering a high degree of UVB/UVA protection, this white lotion accomplishes this with menthyl anthranilate without the use of PABA or oxybenzone. The use of a waterproof resin along with minimum emulsifier levels insure no rewetting on the skin. This formulation has been tested and produced an SPF value of 15. It is anticipated that this product will be waterproof.

SUNSCREEN LOTION

RAW MATERIALS	% By Weight
Oil Phase:	
AMERSIL ME-358	9.0
Cyclomethicone Pentamer	2.0
AMERCHOL L-101	3.0
GLUCAM P-20 Distearate	1.0
Octyldodecyl Stearoyl Stearate	0.5
GLUCATE DO	0.4
AMERSCOL U.S.P.	4.0
Water Phase:	
Glycerin	5.0
CELLOSIZATE HEC QP-40	1.4
NaCl	0.8
Deionized water	72.9
Preservative and perfume	q.s.

Procedure:

Combine oil phase ingredients and heat gently to 40C. Combine water phase ingredients with mixing at room temperature. When oil phase solids have melted, remove from heat and begin adding water phase. Water phase should be added in 10, 40, 40 and 10% increments. Mix between 500 and 1,000 RPMs. Allow formula to obtain a uniform consistency after each incremental addition, before next increment is added.

Description:

Flowing, glossy, white lotion with moderate sun protection provided by UV absorber AMERSCOL U.S.P. AMERSIL ME-358 imparts a luxurious, velvety, nongreasy feel to the skin while also contributing to the emulsification of the cyclomethicone pentamer. Emolliency is enhanced by GLUCAM P-20 Distearate. The combination of w/o emulsifiers GLUCATE DO and AMERCHOL L-101 provides good stability and contributes to the smooth appearance of the lotion.

D) Triethanolamine (99%)	1.3
E) Deionized Water	22.0
Powdered Aloe Vera	0.1
Tristat IU	0.3
F) Polysorbate 20	0.5
Carrot Oleoresin (0.2%)	0.5
G) Robertet Fragrance Bahamas E 4094	0.3

Procedure:

Disperse Carbomer in Water (A) and heat to 60-65C. Prepare Phase B and when clear add to A while mixing. Weigh C and heat to 65-70C. Add C to AB with side sweep agitation. Add D to batch and mix until smooth and uniform. Start cooling batch. Prepare Phase E by dispersing Aloe in water while mixing and then add Tristat IU. When Aloe is fully dispersed add E to batch at a moderate rate while mixing. Mix until smooth and uniform. Prepare Phase F by mixing the ingredients together until uniformly blended. Add F to batch while mixing. (Note: If Carrot Oleoresin is added to batch without being blended with Polysorbate 20, it will not disperse through the batch properly.) Mix until uniformly colored. Add G and mix till uniform. Cool to 30-35C.

Heat the water to 55C. Slowly add VEEGUM Ultra to the water while stirring with a propeller mixer at 500 rpm. Increase the mixer speed to 1500-1700 rpm and mix for 30 minutes, maintaining temperature at 55C. Add glycerin and mix for 5 minutes. Mix B ingredients and heat to 60C. Add B to A while mixing at 1500-1700 rpm. Continue mixing for 30 minutes. Avoid air entrapment. Slow mixing speed to 1000 rpm and continue mixing while cooling to 35C. Add C and mix until uniform. Package.

Product Characteristics: Viscosity: 5500 cps

pH: 5.0

Features:

VEEGUM Ultra is used to thicken and stabilize this sunscreen emulsion. Two ultra violet absorbers are used to achieve an estimated SPF (Sun Protection Factor) of approximately 15. This smooth, flowable lotion spreads easily and dries quickly, leaving a non-tacky after-feel.

Lexamine L-13	2.00
DERMACRYL-79	2.00
Phase B:	
Deionized Water	53.60
Carbopol 941	0.20
Triethanolamine 99%	1.50
Phase C:	
Germaben IIE	1.00
Phase D:	
Fragrance	0.20

Substantivity (In vivo waterproof test) - 95.5%

Procedure:

Disperse Carbopol 941 into water and heat to 80C, add Triethanolamine slowly to prepare Phase B. Combine Phase A ingredients except DERMACRYL-79 and heat to 80C. Sift DERMACRYL-79 in the oil phase with constant stirring until dissolved. Add Phase A to Phase B at 80C and mix for 15 minutes. Cool to room temperature and package.

Description:

This high SPF moisturizing, waterproof sunscreen provides protection against UV radiation. The polymer DERMACRYL-79 adds the waterproofing properties.

CLEAR GEL TOOTHPASTE

INGREDIENT	% By Weight
Sorbitol (70% solids)	68.14
Hydrated silica abrasive Sylodent 700	14.00
Hydrated silica thickener Sylodent 15	7.00
Polyethylene glycol (PEG-32)	4.00
Distilled water	to 100.00
Sodium lauryl sulfate (SLS)	1.40
SD alcohol 38B	1.10
Flavor	1.00
Sodium monofluorophosphate	0.76
AQUALON CMC-9M31XF	0.30
Sodium saccharin	0.20
Sodium benzoate	0.10
FD&C Blue No. 1 (1.0 wt% solution)	0.20
D&C Yellow No. 10 (1.0 wt% solution)	0.09

Procedure:

1. Combine all of the sodium saccharin, sodium benzoate, and sodium monofluorophosphate with all the available distilled water and 10% of the sorbitol. Add the FD&C Blue No. 1 and D&C Yellow No. 10 solutions. Mix and heat to 45 to 50C. Cool to room temperature.
2. In a separate vessel, add the sodium lauryl sulfate to a portion of the sorbitol, using the following weight ratio: 1 part SLS to 4 parts sorbitol. Mix, using mild agitation. Heat to 60C to deaerate.
3. In another vessel, combine the flavor and SD alcohol 38D.
4. Combine all the remaining sorbitol with the PEG-32. Heat to 50C. While mixing vigorously with an electric stirrer, sift in the CMC. Mix for 30 min or until the CMC is fully dissolved and no polymer gels remain.
5. Add the polymer mixture to a Ross double planetary toothpaste mixer. The cooling water in the jacket should be set to 20C.
6. Add the salt solution to the toothpaste mixer. Mix at speed 6 for 25 min.
7. Add one-third of the hydrated silica. Mix at speed 2 until the ingredients are combined. Repeat until all the hydrated silica is added.
8. Increase to speed 6 (highest) and mix for 25 min at a vacuum of 27 to 28 in Hg or until homogeneous and transparent.
9. Add the flavor and SLS solutions. Mix at speed 1 at a vacuum of 27 to 28 in Hg for 5 min or until combined and homogeneous.

Carbomer 940	0.20
Sodium saccharin	0.20
Titanium dioxide	0.16
FD&C Blue No. 1 (1% solution)	0.03

Toothpaste Appearance: Midway between an opacified gel and a cream paste. Add more TiO₂ for a cream appearance, less for an opacified gel.

Procedure:

1. Add FD&C Blue No. 1 (1.0 wt% solution) to a 28.0% solution of sodium lauryl sulfate. Heat to 60C to deaerate.
2. Prepare a solution of sodium fluoride, tetrasodium pyrophosphate, disodium pyrophosphate, and sodium saccharin in 220 g distilled water at 50C.
3. Combine carbomer and CMC-9M31XF. Slurry the polymer mixture in glycerin, using a propeller blade agitator at high speed, and heat to 50C. Mix in the sorbitol, the PEG-6, and the remaining distilled water. Mix for 30 min or until fully hydrated.
4. Add the polymer solution to the Ross mixer, set to 20C. Mix at speed 6 (highest) for 30 min.
5. Add the salt solution to the Ross mixer. Mix at speed 6 for 15 min or until the salts are thoroughly dissolved.
6. Add the hydrated silica and titanium dioxide. Mix at speed 2 for 5 min or until combined. Increase to speed 6 and mix for 15 min at a vacuum of 27 to 28 in Hg or until homogeneous and deaerated.
7. Add the surfactant solution and flavor. Mix at speed 1 at a vacuum of 27 to 28 in Hg for 5 min or just until thoroughly combined.

Water	Balance

CALBRITE SM dicalcium phosphate dihydrate is stabilised for use in dentrifice formulations, and passes stability test TGA46 of the Board of Standards of the US Toilet Goods Association Inc.

CALBRITE DM dicalcium phosphate dihydrate is stabilised to give improved compatibility with sodium monofluorophosphate for use in therapeutic toothpaste manufacture. A typical therapeutic toothpaste could be made by adding 0.8% ALBRITE sodium monofluorophosphate to the formulation given above, with CALBRITE DM replacing the CALBRITE SM.

CHILD'S WOUND OINTMENT

INGREDIENTS	% By Weight
EMULGADE F	12.0
Petrolatum	18.0
CETIOL	6.0
Mineral Oil	6.0
Zinc Oxide	10.0
Talc	10.0
Part B:	
Water	37.0
Germaben II	1.0

Procedure:

1. Mix and melt Part A 70C.
2. Heat Part B to 70C and add to Part A. Mix.
3. Stir until room temperature. Homogenize.

Comments:

This skin protective cream is an O/W emulsion. CETIOL closely resembles biological skin oils and is used in many pharmaceutical applications as a re-fattening and spreading agent.

GEL FORMULATION

INGREDIENT	% By Weight
A. Glycerin	25.51
Thickener	0.35
Distilled water	2.91
PEG-12	3.06
B. Sorbitol (70%)	43.65
C. Sodium saccharin	0.19
Sodium benzoate	0.51
Sodium monofluorophosphate	0.76
D. Syloid 74	16.33
E. Syloid 244	5.10
F. Flavor	0.56
Color	0.05
Sodium lauryl sulfate	1.02

Procedure:

- Slurry the thickener in the glycerin. Add the water and PEG-12. Mix for 10 min at speed 1 at full vacuum.
- Add the sorbitol and mix for 20 min at speed 1 at 20-in. vacuum.
- Add the sodium salts and mix for 2 min at speed 1 at 20-in. vacuum.
- Add the Syloid 74 and mix briefly with no vacuum until the particles are wetted out. Then proceed with 5-min mixing at 12 to 14-in. vacuum.
- Add the Syloid 244 and mix as in Step 4.
- Add the flavor and surfactant. Mix for 30 to 40 minutes at speed 1 with full vacuum.
- Package into tubes and test after 24 hrs.

A denture adhesive is a device applied to the base of a denture before the denture is inserted into the user's mouth. The device is used to improve denture retention and comfort. Although this definition describes the adhesive as a device, it is supplied as a powder, cream, or liquid.

Many products on the market include POLYOX Resins as described in U.S. Patents 2978812 and 4280936. POLYOX has the unique property of being wetted rapidly by water, resulting in a soft, resilient gel between the plate and the jaw. Its tackiness also helps prevent undesirable slippage of the dental plate. The low toxicity, resistance to attack by salivary enzymes, low odor and tastelessness make these resins ideal for denture adhesives.

Procedure:

1. Add MACKAMIDE PKM and Choroxylenol to MACKANATE LO-Special and heat to 70 degrees C.
2. Blend until homogenous.
3. Dissolve MACKERNIUM 007 in water and add to product.
4. Blend until completely homogenous.
5. Cool to 50 degrees C. with mild agitation.
6. Add MACKSTAT DM and fragrance and cool with continuous agitation.

Formula BF-163

HAND SAFETY CLEANER

RAW MATERIALS	% By Weight
1. MACKADET SBC-8	40.00
2. Morton Thiokol #295	1.20
3. Sodium Chloride	0.75-1.00
4. Fragrance	Q.S.
5. MACKSTAT DM	Q.S.
6. Deionized Water	Q.S.
7. Color	Q.S.

pH: 6.5-7.0

Viscosity: 5000-10,000 cps

Procedures:

1. Dissolve #1 and #5 in 3/4 of the water (#6) with good mixing. Make sure everything is completely dissolved.
2. Dissolve #3 in part of the remaining water (#6) and mix everything well.
3. Separately blend #2 with the rest of the available water (#6) until completely in solution.
4. Add this solution very slowly to the tank while mixing.
5. Add #4 and finally #7, if required.
6. Adjust pH if necessary with citric acid or dilute sodium hydroxide solution and viscosity with salt solution.
7. Filter product if necessary.

Formula AY-131-1-1122

HIGH-WATER-CONTENT GEL

INGREDIENTS	% By Weight
Glycerin	20.00
Sorbitol (70% solids)	33.00
Distilled water	To 100.00
Hydrated silica abrasive Syldent 700	17.10
Hydrated silica thickener Syldent 15	1.37
PEG-12	3.00
CMC-7MXF	0.55
CMC-9M8XF	0.45
Sodium lauryl sulfate (SLS)	1.00
Sodium monofluorophosphate	0.76
Sodium benzoate	0.50
Flavor	0.50
FD&C Blue No. 1 (1.0 wt % solution)	0.023

Procedure:

1. Add the sodium benzoate and sodium monofluorophosphate to a portion of the distilled water, using the following weight ratio: 1 part salt to 10 parts water. Mix until dissolved.
2. Add the sodium lauryl sulfate to a portion of the sorbitol, using the following weight ratio: 1 part SLS to 4 parts sorbitol. Mix, using mild agitation. Heat to 60C to deaerate.
3. Slurry all the CMC in the glycerin. While mixing vigorously with an electric stirrer, add all the remaining distilled water, sorbitol, and PEG-12. Mix for 30 min or until the CMC is fully dissolved and no polymer gels remain.
4. Add the polymer mixture to the toothpaste mixer (Ross double planetary mixer, model 130 LDM-2). The temperature of the mixer jacket should have been preset to 20C.
5. Add the FD&C Blue No. 1 solution to the polymer mixture and mix until homogeneous.
6. Add the salt solution to the polymer mixture and mix until the salt is fully dissolved.
7. Add one-third of the hydrated silica. Mix at speed 2 (low) until just combined. Repeat until all the hydrated silica is added.
8. Increase to speed 6 (highest) and mix for 25 min at a vacuum of 27 to 28 in Hg or until homogeneous and deaerated.
9. Add the flavor and SLS solution. Mix at speed 1 at a vacuum of 27 to 28 in Hg for 5 min or until combined and homogeneous. Note: If refrigeration is not available, a temperature of 25C maximum is acceptable. Temperature control is desirable to: (1) avoid batch-to-batch variation, and (2) prevent loss of water and flavor during deaeration.

The typical silica gel formulations contain less than 20% water. This high-water-content gel contains just over 30% water. The CMC-7MXF is necessary to provide sufficient gel structure in the high-water formulation.

Lanolin Alcohol	90	
Butyl Stearate	90	
Isopropyl Stearate	88	
Isopropyl Palmitate	88	
Isopropyl Myristate	88	

Gel Stability: Excellent Compatibility, No Separation

A-C 617 MINERAL OIL GEL

RAW MATERIALS	% By Weight
1. A-C 617	10.0
2. Mineral Oil	90.0

Procedure:

With simple agitation, gradually heat the mixture above its cloud point (81C). If faster solvation is preferred, the mixture may be heated slightly above 102C until the wax is completely dissolved and a homogeneous solution is produced.

For stable gels, the solution is fast cooled with simple agitation or slowly cooled with good shear. Homomixer or colloid mill could be used to generate shear. Objective is to create a fine particle size gel where the fine polyethylene particles interlock to create this thixotropic body. At 10C below its cloud point, simple agitation is again used and the gel is agitated to a temperature where it is still packageable without causing air entrapment.

EMOLLIENT TRANSPARENT GEL

INGREDIENTS:	% By Weight
Part A:	
EUMULGIN B-3	13.00
CETIOL HE	25.00
CETIOL V	5.00
Part B:	
Water, Deionized	56.75
Dyes	q.s.
Part C:	
Fragrance	q.s.
Preservative	q.s.
Procedure:	

Heat Part A to 70-75C. Heat Part B to 70-75C. Add Part B to Part A under agitation. Continue stirring and at 55-60C add individual components of Part C. Once the product is homogeneous, fill off.

Comments:

EUMULGIN B-3 is utilized in the manufacture of clear, transparent ringing gels. This microemulsion is an excellent emollient base. The ethoxylated cocoate and fatty acid ester provide protective dermal properties that may be useful for treatment products and makeup items where moisturization is required.

Manufacturing Process:

Part A: Weigh all ingredients.

Part B: Disperse Carbopol and Pemulen in the mixture of Abil and Finsolv very carefully with high speed agitation. Then add part B to part A while stirring. Stir 45 minutes.

Part C: Add triethanolamine while stirring.

Part D: Dissolve Frescolat and Fragrance in isopropyl myristate (if necessary heat to max. 40C). Then add part D to part A/B/C and stir.

Part E: Add the Cremogen and stir until homogenous.

The pH value of the finished emulsion should be approx. 7 and has to be controlled.

SOURCE: Haarman & Reimer GmbH: Formula K 8/1-51525 A/E

SUPER HOT OIL

RAW MATERIALS % By Weight

Part A:

1. MACKALENE 426	4.40
2. MACKAMIDE AME-75	4.40
3. Polyglycol 400	4.40
4. Polysorbate 80	1.76
5. Benzyl Alcohol	0.26
6. DC 193	0.22
7. Natrosol 250HHR	0.50
8. Tetrasodium EDTA 40%	0.15
9. Deionized Water	70.00

Part B:

10. MACKERNIUM SDC-25	6.0
11. Glycerin	3.6
12. Isopropyl Alcohol	1.5
13. Butoxyethanol	0.6

Part C:

14. MACKSTAT DM	qs
15. Fragrance	qs
16. Color	qs
17. Deionized Water	qs

Procedure:

Part A:

1. Disperse #7 into water #9.
2. Heat to 120 degrees F. (50 degrees C.) and add #1, #2, #3, #5, #6, #8. Blend together with appropriate mixing.

Part B:

1. In a separate vessel blend #10, #11, #12, #13, warm slightly (110 degrees F.) to dissolve completely and clearly.
2. Then add part B while mixing to the large manufacturing tank.

Part C:

1. Blend #4 with fragrance #15 and add to tank.
2. Then add #14, #16 and the remainder of water #17.

Appearance: Clear Liquid

pH (Adjust up with Triethanolamine): 4.4-4.8

Viscosity (cps): 60-240 cps

Copolymer 845	PVP/Dimethylamino-ethylmethacrylate copolymer	GAF
Cornflower HS	Cornflower extract	Tri-K
Corn Starch 78-1898	Specialty corn starch	Nat. Starch
Cosmedia Guar C261	Guar hydroxypropyl trimonium chloride	Henkel
Cosmedia Polymer HSP-1180	Polyacrylamidopropane sulfonic acid	Henkel
Cosmetic AA Lanolin	Lanolin	Amerchol
7061 Cosmetic Brown	Iron oxide	W.Jenkinson
7058 Cosmetic Brown	Iron oxide	W.Jenkinson
Cosmetic Iron Blue	Ferric Ammonium Ferrocyanide	W.Jenkinson
7054 Cosmetic Red	Iron oxide	W.Jenkinson
Cosmetic Sienna CS-10051		Whittaker
Cosmetic Umber BC7196	Iron oxide	W.Jenkinson
Cosmetic Yellows	Iron oxide	W.Jenkinson
Cosmowax J	Cetearyl alcohol and cetareth 20	Croda
Cosmowax K	Stearyl alcohol and cetareth 20	Croda
Covi-Ox T-50	Antioxidant	CLR/Richter

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Covitol 1100	Tocopherol acetate	Henkel
Cremogen Aloe Vera	Aloe vera	Haarman
Cremogen Birch Leaves		Haarman
Cremogen Camomile 739 012	Propylene glycol and ethoxy- diglycol and camomile extract	Haarman
Cremogen Camomile Forte 728 790	Matricaria extract and propyl- ene glycol and ethoxydiglycol	Haarman
Cremogen Camomile Special 739027	Propylene glycol and matric- aria extract	Haarman
Cremogen Hamamelis Dest.	Herbal distillate	Haarman
Cremogen Hamamelis Water	Witch hazel distilled	Haarman
Cremogen Hamamelis (Witch Hazel)	Propylene glycol and ethoxy- diglycol and witch hazel extract	Haarman
Cremogen M-82	Propylene glycol and ethoxy- diglycol and matric and nettle and balm mint and coltsfoot and horsetail and horse chestnut and rosemary and sage extract	Haarman
Cremogen Melissa (Balm) 739 013	Propylene glycol and ethoxydi- glycol and balm mint extract	Haarman
Cremogen Rosemary Forte 758 302	Rosemary extract and propylene glycol	Haarman
Cremogen Sage	Propylene glycol and ethoxydi- glycol and sage extract	Haarman
Cremogen Tormentil	Propylene glycol and ethoxydi- glycol and tormentil extract	Haarman
Cremophor A6	Ceteareth-6	BASF
Cremophor A11	Ceteareth-11	BASF
Cremophor A25	Ceteareth-25	BASF

Cremophor RH60	PEG-60 Hydrogenated castor oil	BASF
Cremophor RH455	PEG-40 Hydrogenated castor oil	BASF
Cremophor S9	PEG-9 Stearate	BASF
Cremophor WO7	PEG-7 Hydrogenated castor oil	BASF
Crill 6	Sorbitan isostearate	Croda
Crillet 3	Polysorbate 60	Croda
Crodacel QS	Stearidimonium hydroxyethyl cellulose	Croda
Crodacol C-95	Cetyl alcohol	Croda
Crodafos SG	PPG-5-Ceteth-10 phosphate	Croda
Crodalan AWS	Polysorbate 80 and cetyl acetate and acetylated lanolin alcohol	Croda
Crodamol MM	Myristyl myristate	Croda
Crodamol PMP	PPG-2 Myristyl ether propionate	Croda
Crodamol PTIS	Pentaerythritol tetra iso-stearate	Croda
Crodamol SS	Cetyl esters	Croda
Crodapearl Liquid	Sodium laureth sulfate and hydroxyethyl stearamide MIPA	Croda
Crodawax GP200	Stearyl alcohol and PEG-Stearate	Croda
Crodesta SL-40	Sucrose Cocoate	Croda

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Cromoist HYA	Hydrolyzed protein and hyaluronic acid	Croda
Croquat L	Laurdimonium hydrolyzed animal protein	Croda
Croquat S	Steardimonium hydrolyzed protein	Croda
Croquat WKP	Cocodimonium hydrolyzed animal keratin	Croda
Crosilk Liquid	Silk amino acids	Croda
Crosilkquat	Cocodimonium silk amino acids	Croda
Crosultaine C-50	Cocamidopropyl hydroxysultaine	Croda
Crosultaine E-30	Erucamidopropyl hydroxysultaine	Croda
Crosultaine T-30	Tallowamidopropyl hydroxysultaine	Croda
Crotein A	Protein derivative	Croda
Crotein AD Anh.	Protein derivative	Croda
Crotein O	Protein derivative	Croda
Crotein SPC	Hydrolysed animal protein	Croda
Crothix	Polyol alkoxy ester	Croda
Crovol A-40	PEG-20 Almond glycerides	Croda
Crovol A-70	PEG-60 Almond glycerides	Croda
Crovol M40	PEG-20 Corn glycerides	Croda
Crovol M70	PEG-60 Corn glycerides	Croda
Crovol PK-70	PEG-45 Palm kernel glycerides	Croda
Crystal O	Castor oil	CasChem
Cutavit Richter	Multivitamin complex	CLR/Richter
Cutina AGS	Glycol distearate	Henkel

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Cutina BW	Glyceryl hydroxystearate and cetyl palmitate and micro-crystalline wax and trihydroxystearin	Henkel
Cutina CBS	Glyceryl stearate and cetearyl alcohol and cetyl palmitate and cocoglyceride	Henkel
Cutina CP	Cetyl palmitate	Henkel
Cutina E-24	PEG-40 glyceryl stearate	Henkel
Cutina EGMS		Henkel
Cutina FS25	Stearic/palmitic acid	Henkel
Cutina FS45	Eutectical fatty acid mixture	Henkel
Cutina GMS	Glyceryl monostearate	Henkel
Cutina KD-16	Glyceryl stearate S.E.	Henkel
Cutina KS-18		Henkel
Cutina LE	Glyceryl stearate and sodium cetearyl sulfate	Henkel
Cutina LM		Henkel
Cutina LM4		Henkel
Cutina LS18		Henkel
Cutina MD	Glyceryl stearate	Henkel
Cutina MD-A	Mixture of mono- and di-glycerides of palmitic and stearic acids	Henkel
Cyclomethicone		Union Carb.

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
DC-190 Silicone	Dimethicone copolyol	Dow Corning
DC-193 Silicone	Dimethicone copolyol	Dow Corning
DC-556 Silicone	Phenyl dimethicone	Dow Corning
DC Emulsion 929	Amodimethicone and nonoxynol-10 and tallow-trimonium chloride	Dow Corning
D&C Red #7 Ca Lake	D&C Red lake	Thomasset
DEA Oleth-3 Phosphate		Heterene
d-delta Rich Tocopherols Concentrate		Tri-K
Dehydag Wax N	Emulsifier based on fatty alcohols	Henkel
Dehydag Wax 16	Cetyl alcohol	Henkel
Dehydrol LS3	Laureth-3	Henkel
Dehymuls HRE7	PEG-7 Hydrogenated castor oil	Henkel
Dehymuls K	Mixture of higher molecular weight esters with mineral fats	Henkel
Dehyquart A	Cetyltrimethylammonium chloride	Henkel
Dehyquart E	Hydroxycetyl hydroxyethyl dimonium chloride	Henkel
Dehyquart SP	Quaternium 52	Henkel
Dehyton AB30	Coco-Betaine	Henkel
Dehyton K	Cocamidopropyl betaine	Henkel
Delsette-101	Adipic acid/Epoxypropyl diethylene triamine copolymer	Hercules
Demaquillant 687LS	Pellitory of the wall extract and kidney bean extract and ivy extract and sunflower extract	Tri-K

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
DeMide ML-100	Lauramide DEA	DeForest
Dentphos K	Dicalcium phosphate dihydrate	BK-Laden.
Deodorant Richter/K	Tetrabromo-o-cresol	CLR/Richter
